FROM FAST FRIENDS TO FAST GIRLS

### **Joyride (Mills & Boon Silhouette)**

This book analyzes the relationship between urban development, greenhouse gases and the carbon footprint, and presents the main preventive measures that can be implemented at the design stage. Readers are provided with the knowledge needed to devise a strategy for calculating the carbon footprint of urban planning instruments, as well as a framework for integrating sustainability into the planning

phase. This book is an in-depth examination of the much needed process of “self” study known as self observation. We live in an age where the “attention function” in the brain has been badly damaged by TV and computers-up to 90 percent of the public under age 35 suffers from attention-deficit disorder! This book offers the most direct, non-pharmaceutical means of healing attention dysfunction. The methods presented here are capable of restoring attention to a fully functional and powerful tool for success in life and relationships. This is also an age when humanity has lost its connection with conscience. When humanity has poisoned the Earth’s atmosphere, water, air and soil, when cancer is in epidemic proportions and is mainly an environmental illness, the author asks: What is the root cause? And he boldly answers: Failure to develop conscience! Selfobservation, he asserts, is the

most ancient, scientific, and proven means to develop this crucial inner guide to awakening and a moral life. This book is for the lay-reader, both the beginner and the advanced student of self observation. No other book on the market examines this practice in such detail. There are hundreds of books on self-help and meditation, but almost none on self-study via self-observation, and none with the depth of analysis, wealth of explication, and richness of experience which this book offers. Red Hawk, author of 5 collections of poetry, was the Hodder Fellow at Princeton University (1992-93) and is currently a full professor at the University of Arkansas, Monticello. He has practiced self-observation for over 30 years, under the guidance of the Gurdjieff Society of Arkansas, meditation master Osho Rajneesh, and spiritual teacher, Lee Lozowick.

### **Carbon Footprint and Urban Planning**

For decades the crown jewels of Japan's postwar manufacturing industry, motorcycles remain one of Japan's top exports. Japan's Motorcycle Wars assesses the historical development and societal impact of the motorcycle industry, from the influence of motor sports on vehicle sales in the early 1900s to the postwar developments that led to the massive wave of motorization sweeping the Asia-Pacific region today. Jeffrey Alexander brings a wealth of information to light, providing English translations of transcripts, industry publications, and company histories that have until now been available only in Japanese. By exploring the

DIVGas prices go up and down, but mostly up, and that trend is likely to continue for the foreseeable future. Because of this, people are increasingly turning to motor scooters. In addition to being entertaining to ride and providing extreme mobility, scooters often travel up to 100 miles for each gallon of gasoline burned. How to Repair Your Scooter is divided into chapters according to the scooter's various mechanical systems. For example, brakes, suspension, intake, exhaust, etc. each have their own chapter. Each chapter begins with a simple explanation of how the subsystem works and what its strengths and weaknesses are. The chapter then takes the reader through a series of common maintenance and repair projects, each illustrated with step-by-step sequential photography with captions. Content covers two- and four-stroke scooters and is relevant for machines from all markets. /div

creation techniques. Then the modern imitative analog instruments are examined, again with detailed instructions for programming and using them, and the book is completed with appendices listing the major instrument lines available, hints on values and purchasing, other sources of information, and a discography of readily available recordings which give good examples of analog sound synthesis. The CD which accompanies the book gives many examples of analog sound creation basics as well as more advanced techniques, and of the abilities of the individual instruments associated with classical and with imitative analog sound synthesis.

In the past two decades, transnational adoption has exploded in scope and significance, growing up along increasingly globalized economic relations and the development and improvement of reproductive technologies. A complex and understudied system, transnational adoption opens a window onto the relations between nations, the inequalities of the rich and the poor, and the history of race and racialization, Transnational adoption has been marked by the geographies of unequal power, as children move from poorer countries and families to wealthier ones, yet little work has been done to synthesize its complex and sometimes contradictory effects. Rather than focusing only on the United States, as much previous work on the topic does, International Adoption considers the perspectives of a number of sending countries as well as other receiving countries, particularly in Europe. The book also reminds us that the U.S. also sends children into

international adoptions—particularly children of color. The book thus complicates the standard scholarly treatment of the subject, which tends to focus on the tensions between those who argue that transnational adoption is an outgrowth of American wealth, power, and military might (as well as a rejection of adoption from domestic foster care) and those who maintain that it is about a desire to help children in need.
