Is true greatness obtainable from everyday means and everyday genes? Conventional wisdom says no, that a lucky few are simply born with certain gifts. The new science of human potential suggests otherwise. Forget everything you think you know about genes, talent, and intelligence, and take a look at the amazing new evidence. Here, interweaving cutting-edge research from numerous scientific fields, David Shenk offers a new view of human potential, giving readers more of a sense of ownership over their accomplishments, and freeing parents from the bonds of genetic determinism. As Shenk points out, our genes are not a “blueprint” that dictate individual destinies. Rather we are all the product of interplay between genes and outside stimuli—a dynamic that we can influence. It is a revolutionary and life-changing message.

The Waldorf School movement has its roots in the chaotic period following the First World War. Struggling to create the first school, Rudolf Steiner worked on every detail. Lesson plans, religious education, school hours, course resources, administration, finance, child study; no aspect of school life was beyond his attention. Guiding the faculty and demonstrating a phenomenal range of knowledge, Steiner moved toward his goal of creating a vehicle for social transformation. These two volumes span the years 1919 to 1924 and cover, meeting by meeting, the development of the first Waldorf School. Here is Rudolf Steiner, not through the written word or lectures but in transcribed interaction that details the creation process. Participating in a work in progress, Steiner deals with an amazing array of problems, frustrations, successes and failures. His sleeves rolled up and his sight on a vision that he made a reality, Rudolf Steiner lays the foundations of Waldorf Education. This detailed look, behind the scenes, will interest not only teachers, but also parents and students: anyone who wants to know how a successful worldwide school movement arose.
