Extraordinary accuracy and beautiful original artwork are just two features readers will find in this new resource, providing a basic foundation in domestic large animal anatomy. Its unique organization includes the anatomy of all organ systems in the various species, described in a consistent manner. The book presents relevant anatomy of the following species: * Horse (with contributors by Dr. Gayle Trotter) * Ox (with contributions by Dr. Fran Garry) * Sheep and goat (with contributions by Dr. Joan Bowen) * Llama and alpaca (with contributions by Dr. LaRue Johnson) * Swine (with contributions by Dr. LaRue Johnson) * and chicken (with contributions by Dr. John Avens). Features that enhance understanding: * Carefully selected labeling helps students learn and remember structures and relationships. * Male and female of a given species are depicted on facing pages so that topographic anatomy is easy to compare. * Structures common to various animals are labeled several times, whereas unique structures are labeled only on one or two species so students can make rapid distinctions of the structures peculiar to certain animals. * An introduction provides readers with a background in nomenclature and anatomic orientation so they can benefit from the atlas even if they lack training in anatomy. The Atlas depicts topographic relationships of major organs in a simple, yet technically accurate presentation that's free of

extraneous detail so that those using the atlas can concentrate on the essential aspects of anatomy.

Spurgeon's Color Atlas of Large Animal Anatomy

This new volume is the first photographic atlas of equine anatomy to integrate illustrations of prepared specimens with correlative images of the same structures as visualised by each of the commonly used imaging modalities; radiography, ultrasound and endoscopy. Additional images illustrate the position and orientation of these structures in the living animal, as they would most commonly be encountered, either in the course of a physical examination (for example the viscera or reproductive organs in a rectal or vaginal examination), or as they present in the prone animal, during a surgical procedure. Thus the atlas has a true utility for the practitioner as well as the student. The only atlas of anatomy that combines illustrations of gross anatomy with radiographic images, ultrasound and endoscopic views to give a complete appreciation of all the structures Preparations of cross-sectional anatomy aid interpretation of diagnostic imaging such as ultrasonography All photographs are of fresh material, or living animals, rather than preserved specimens, to demonstrate the appearance of tissues in the living animal, or at post mortem autopsy Includes annotated images to illustrate the position and orientation of structures in situ, in the living animal, as they will be encountered in carrying out a physical examination or surgical procedure Colour photographs, with correlative radiographs are selected according to clinical importance

Essential Clinically Applied Anatomy of the Peripheral Nervous System in the Limbs

A sound knowledge of anatomy and physiology is an essential basis for the effective clinical treatment of companion animals and farm animals alike. The fourth edition of this bestselling book continues to provide a comprehensive description of the anatomy and physiology of dogs and cats. The book builds on these foundations with detailed descriptions of exotic small species including birds, and domestic farm animals, including cows, sheep and pigs, as well as the horse.

Veterinary Physiology and Applied Anatomy

The text of this book with regional approach of teaching and studying veterinary gross anatomy has been divided in six parts. The first part comprises the basics of veterinary anatomy described in the conventional form of systemic anatomy while the remaining five parts comprise region wise description of gross anatomy. Each of these parts contains the

description of all anatomical structures viz. bones, joints, muscles, viscera, blood vessels, lymphatics nerves, etc located in the respective region of the animal body viz. head, neck, thorax, abdomen, pelvis and the fore and hind limb. Bovine animal, the ox, has been considered as a model species for detail description of the anatomical features, while the major differences or remarkable features in other species like horse, dog, sheep and goat, pig and fowl have been described under a separate heading as Comparative Anatomy at the end of each section. In addition to this, a separate section on Applied Anatomy has been introduced at the end of each regional part. This will make it easy to understand the applications of the anatomical features that form the basis of surgical, diagnostic, medical and obstetrical techniques in the solution of clinical disorders which is the main purpose of regional pattern of learning the anatomy. Because of these distinctive features, the book has become a little voluminous and therefore, had to be split into two volumes. Part-I comprises the first three parts viz-General Systemic Anatomy, Anatomy of Head and Neck and the Anatomy of Thorax while the Part-II comprises the next three parts viz- the Anatomy of Abdomen and Pelvis, the Anatomy of Fore limb and the Anatomy of Hind Limb.
