Particle Size Measurement

Discover the definitive history of DARPA, the Defense Advanced Research Project Agency, in this Pulitzer

Prize finalist from the author of the New York Times bestseller *Area 51*. No one has ever written the history of the Defense Department's most secret, most powerful, and most controversial military science R&D agency. In the first-ever history about the organization, New York Times bestselling author Annie Jacobsen draws on inside sources, exclusive interviews, private documents, and declassified memos to paint a picture of DARPA, or "the Pentagon's brain," from its Cold War inception in 1958 to the present. This is the book on DARPA -- a compelling narrative about this clandestine intersection of science and the American military and the often frightening results.

North Dakota Blue Book

For at least half of the twentieth century, psychology and the other mental health professions all but ignored the significant adaptive possibilities of the human gift of imagery. Our capacity seemingly to duplicate sights, sounds, and other sensory experiences through some form of central brain process continues to remain a mysterious, almost miraculous skill. Because imagery is so much a private experience, experimental psychologists found it hard to measure and turned their attention to observable behaviors that could easily be studied in animals as well as in humans. Psychoanalysts and others working with the emotionally disturbed continued to take imagery information seriously in the form of dream reports, transference fantasies, and as indications of hallucinations or delusions. On

the whole, however, they emphasized the maladaptive aspects of the phenomena, the distortions and defensiveness or the "regressive" qualities of daydreams and sequences of images. The present volume grows out of a long series of investigations by the senior author that have suggested that daydreaming and the stream of consciousness are not simply manifestations in adult life of persisting phenomena of childhood. Rather, the data suggest that imagery sequences represent a major system of encoding and transforming information, a basic human capacity that is inevitably part of the brain's storage process and one that has enormous potential for adaptive utility. A companion volume, *The Stream of Consciousness*, edited by Kenneth S. Pope and Jerome L.

History of Nordic Computing

Over the past twenty years there has been considerable improvement and new information in the design of port and berth structures. This handbook reflects the latest progress and developments in navigation safety, port planning and site selection, layout of container, oil and gas terminals, cargo handling, berth design and construction, fender and mooring principles. It presents guidelines and recommendations for the main items and assumptions in the layout, design and construction of modern port structures, and the forces and loadings acting on them. The book provides an evaluation of different designs and construction methods for port and berth structures, and recommendations given by

the different international harbour standards and recommendations. Practising harbour and port engineers and students will find the handbook an invaluable source of information.

The Pentagon's Brain

Hill's analysis shows that transnational literary studies must operate on multiple scales, combine distant reading with close analysis, and investigate how literary forms develop on the move.

Library of Congress Catalog

Glass offers a wide variety of possible applications for the realization of even the most ambitious designs in architecture, and in the past two decades it has experienced an unparalleled burst of innovation. For planners, this means working constantly with this high-performance material. In compact and appealing form, the completely revised Glass Construction Manual presents the current state of the art on planning and building with glass, from the history through the technical foundations all the way to the most innovative applications. Astonishing perspectives on thermal insulation and solar protection and the addition of thoughtfully selected new practical examples round off this comprehensive reference work.

Refiguring the Archive

This book represents the definitive research collection

for corporate social responsibility communication, offering cross-disciplinary and international perspectives from the top scholars in the field. Addresses a gap in the existing CSR literature Demonstrates the relevance of effective CSR communication for the management of organizations The 28 contributions come from top scholars in public relations, organizational communication, reputation management, marketing and management

Facade Construction Manual

This is the fifth edition of the highly successful work first published in 1968, comprising two definitive volumes on particle characterisation. The first volume is devoted to sampling and particle size measurement, while surface area and pore size determination are reviewed in volume 2. Particle size and characterisation are central to understanding powder properties and behaviour. This book describes numerous potential measuring devices, how they operate and their advantages and disadvantages. It comprise a fully comprehensive treatise on the wide range of available equipment with an extensive literature survey, and a list of manufacturers and suppliers. The author's blend of academic and industrial experience results in a readable technical book with information on how to analyse, present, and extract useful information from data. This is an essential reference book for both industrial and academic research workers in a variety of areas including: pharmaceuticals, food science, pollution analysis and control, electronic materials, agricultural

products, polymers, pigments and chemicals.

The Goals of Sustainable Development

Modern design of berm breakwaters began about thirty years ago. However, to date, there has been a lack of a well-established, formal design methodology on berm breakwaters. The authors Dr Jentsje van der Meer and Sigurdur Sigurdarson combine over 40 years of collective experience working with breakwaters to put forward a design framework in *Design and Construction of Berm Breakwaters*; covering the science and design practices of berm breakwater structures. The original design consisted of mass armoured berms that reshaped into statically stable S-shaped slopes. The design was adopted in Iceland and eventually led to a development with more stable structures by using available rock sizes, large rock, and more rock gradings than just "small rock (core)" and "large rock (berm)". This more stable and only partly reshaping structure is called the Icelandic-type berm breakwater. Written for researchers and practitioners, the volume consists of chapters on geometrical designs of the berm breakwater cross-section, including berm reshaping and wave overtopping, quarry and project management, as well as blasting and sorting techniques, designs for various wave conditions and available rock classes, and case studies of already constructed berm breakwaters.

The European Landing Obligation

Recoding World Literature

Invasive bladder tumors affect the muscle wall, and have a propensity to metastasize and spread to other areas of the body, and are more likely to be fatal. This book presents state-of-the-art diagnoses and treatments available for bladder cancer that has metastasised into the body. A thorough review of current practice is presented in a full color volume with more than 40 tables and 50 illustrations. The book offers a comprehensive review of the subject, covering epidemiology, screening, diagnostic factors, surgery, chemotherapy and post-operative monitoring. Most chapters are jointly written by a basic researcher and a clinician.

The Handbook of Communication and Corporate Social Responsibility

A multidisciplinary index covering the journal literature of the arts and humanities. It fully covers 1,144 of the world's leading arts and humanities journals, and it indexes individually selected, relevant items from over 6,800 major science and social science journals.

Invasive Bladder Cancer

This book constitutes the refereed post-proceedings of the Third IFIP WG 9.7 Conference on the History of Nordic Computing, HiNC3, held in Stockholm, Sweden, in October 2010. The 50 revised full papers presented together with a keynote address and a panel

discussion were carefully reviewed and selected from numerous submissions. The papers focus on the application and use of ICT and ways in which technical progress affected the conditions of the development and use of ICT systems in the Nordic countries covering a period from around 1970 until the beginning of the 1990s. They are organized in the following topical sections: computerizing public sector industries; computerizing management and financial industries; computerizing art, media, and schools; users and systems development; the making of a Nordic computing industry; Nordic networking; Nordic software development; Nordic research in software and systems development; teaching at Nordic universities; and new historiographical approaches and methodological reflections.

The Chemical Industry in Europe, 1850-1914

Better ways are needed to understand how terrorist groups increase their effectiveness and become more dangerous. Learning is the link between what a group wants to do and its ability to actually do it; therefore, a better understanding of group learning might contribute to the design of better measures for combating terrorism. This study analyzes current understanding of group learning and the factors that influence it. It presents detailed case studies of learning in five terrorist organizations and develops a methodology for ascertaining what and why groups have learned, providing insights into their learning processes.

Figures of the World

Winner, 2018 Aldo and Jeanne Scaglione Prize for Studies in Germanic Languages and Literatures, Modern Language Association Winner, 2018 German Studies Association DAAD Book Prize in Germanistik and Cultural Studies. From the current vantage point of the transformation of books and libraries, B. Venkat Mani presents a historical account of world literature. By locating translation, publication, and circulation along routes of “bibliomigrancy”—the physical and virtual movement of books—Mani narrates how world literature is coded and recoded as literary works find new homes on faraway bookshelves. Mani argues that the proliferation of world literature in a society is the function of a nation’s relationship with print culture—a Faustian pact with books. Moving from early Orientalist collections, to the Nazi magazine *Weltliteratur*, to the European Digital Library, Mani reveals the political foundations for a history of world literature that is at once a philosophical ideal, a process of exchange, a mode of reading, and a system of classification. Shifting current scholarship’s focus from the academic to the general reader, from the university to the public sphere, *Recoding World Literature* argues that world literature is culturally determined, historically conditioned, and politically charged.

Partial Evaluation: Practice and Theory

First multi-year cumulation covers six years: 1965-70.

The Interior Design Reference & Specification Book

This masterful book from top experts provides clinical insights on reverse shoulder arthroplasty gleaned from hands-on refinement of shoulder replacement techniques. Years of significant biomechanical and clinical research yielded invaluable knowledge that led to important improvements in functional outcome and implant durability. Among these refinements were stronger polyethylene derivatives, better ingrowth technology, and improved connection devices. As the durability and longevity of implant technology increased, younger active patients became suitable candidates for this procedure. In fact, RSA has played a pivotal role in making shoulder arthroplasty the fastest growing implant technology. In the first two sections, the authors take the reader through the history and evolution of RSA, followed by step-by-step surgical techniques for specific injuries and conditions. The next three sections discuss past and recent outcomes, complications, and rehabilitation. The last section covers special considerations including patient specific instrumentation, convertible humeral and glenoid components, and the future potential of stemless humeral technology. Key Features The latest trends in patient-specific components, guide systems, and instrument design The use of RSA for rotator cuff repair, shoulder arthritis, and acute and complex fractures In-depth discussion of techniques to improve deltoid function, avoid impingement, and increase implant longevity Clinical pearls on how to recognize

and handle complications that occur: instability, infection, scapular notching, component loosening, glenoid and humeral bone loss, and RSA failure High quality videos and 300 superb illustrations further delineate techniques This book is a practical resource that enables learning complex procedures, putting them into practice, and handling complications should they arise. It is an essential tool for all orthopaedic surgeons who treat shoulder conditions.

Collaboration in Creative Design

Interior Design Illustrated

"This update on Incontinence has been prepared by an international multidisciplinary faculty of more than 200 recognised experts. Each chapter represents the opinion and recommendations of a group of well know experts who have been working together for about 2 years to review the literature and present a clear collegial evidence based strategy for the various aspects of incontinence."--Back cover.

Plasma Membrane Oxidoreductases in Control of Animal and Plant Growth

This fundamental work explains in detail systems for active safety and driver assistance, considering both their structure and their function. These include the well-known standard systems such as Anti-lock braking system (ABS), Electronic Stability Control (ESC) or Adaptive Cruise Control (ACC). But it includes

also new systems for protecting collisions protection, for changing the lane, or for convenient parking. The book aims at giving a complete picture focusing on the entire system. First, it describes the components which are necessary for assistance systems, such as sensors, actuators, mechatronic subsystems, and control elements. Then, it explains key features for the user-friendly design of human-machine interfaces between driver and assistance system. Finally, important characteristic features of driver assistance systems for particular vehicles are presented: Systems for commercial vehicles and motorcycles.

The Power of Human Imagination

From Pulitzer Prize finalist Annie Jacobsen, the untold USA Today bestselling story of the CIA's secret paramilitary units. Surprise . . . your target. Kill . . . your enemy. Vanish . . . without a trace. When diplomacy fails, and war is unwise, the president calls on the CIA's Special Activities Division, a highly-classified branch of the CIA and the most effective, black operations force in the world. Originally known as the president's guerrilla warfare corps, SAD conducts risky and ruthless operations that have evolved over time to defend America from its enemies. Almost every American president since World War II has asked the CIA to conduct sabotage, subversion and, yes, assassination. With unprecedented access to forty-two men and women who proudly and secretly worked on CIA covert operations from the dawn of the Cold War to the present day, along with declassified documents and

deep historical research, Pulitzer Prize finalist Annie Jacobsen unveils -- like never before -- a complex world of individuals working in treacherous environments populated with killers, connivers, and saboteurs. Despite Hollywood notions of off-book operations and external secret hires, covert action is actually one piece in a colossal foreign policy machine. Written with the pacing of a thriller, *Surprise, Kill, Vanish* brings to vivid life the sheer pandemonium and chaos, as well as the unforgettable human will to survive and the intellectual challenge of not giving up hope that define paramilitary and intelligence work. Jacobsen's exclusive interviews -- with members of the CIA's Senior Intelligence Service (equivalent to the Pentagon's generals), its counterterrorism chiefs, targeting officers, and Special Activities Division's Ground Branch operators who conduct today's close-quarters killing operations around the world -- reveal, for the first time, the enormity of this shocking, controversial, and morally complex terrain. Is the CIA's paramilitary army America's weaponized strength, or a liability to its principled standing in the world? Every operation reported in this book, however unsettling, is legal.

50 Years of DNA

The objective of this workshop was to examine the nature of plasma membrane electron transport and how this electron transport contributes to growth of cells. The workshop came at a time when the study of the plasma membrane oxidoreductase activity was beginning to attract more widespread attention from

researchers working with both plants and animals. The rapid response of c fos and c myc Proto-oncogene to stimulation of plasma membrane redox activity by external oxidants under scores a potential role of plasma membrane oxidoreductases in growth control. Other experiments with isolated endosomes indicate emerging roles in endocytosis and lytic processes. Primary attention was focused on trans plasma membrane electron transport which brings about the oxidation of cytosolic, NADH, NADPH or other substrates by electron flow across the plasma membrane to external oxidants including ferric iron, semidehydroascorbate or oxygen. A major theme in the workshop was the relation of this electron flow to pH changes of the cytoplasm or the transfer of protons to the external medium. The presence and role of other oxidoreductases in the plasma membrane was documented, especially in regard to peroxide production. In plant cells this may contribute to cellular defense against invading parasites. A corresponding function in animals has been long known and extensively discussed but was beyond the scope of this workshop.

A Handbook of Corporate Governance and Social Responsibility

Europe is the cradle of the modern international chemical industry. From the middle of the nineteenth century until the outbreak of World War I, the European chemical industry influenced not only the production and control of science and technology, but also made significant contributions towards economic

development, as well as bringing about profound changes in working and living environments. It is a highly complex heritage, both rich and threatening, that calls for close scrutiny. Fortunately, a unique opportunity to explore the historical development of the European chemical industry from a variety of novel standpoints, was made possible during 1993 as part of the European Science Foundation (ESF) programme called 'The Evolution of Chemistry in Europe, 1789-1939.' This process of exploration has taken place through three workshops, each dealing with different time periods. The workshop concerned with the period 1850-1914, which corresponds roughly to the so-called Second Industrial Revolution, was held in Maastricht, The Netherlands, on 23-25 March 1995. This volume is the outcome of that workshop. The other workshops dealing with European chemical industry were held in Liege in 1994, covering the First Industrial Revolution period, 1789-1850, and Strasbourg in 1996, covering the period between the two World Wars.

Port Engineering

During the last two decades of the 20th century there was a considerable improvement in the design of port and berth structures. The purpose of this volume is to give guidelines and recommendations on some of the main design criteria for the planning and construction of modern port and berth structures. The book also includes material from many of the lectures by the author on berth and port structures in the Norwegian Institute of Technology, Department of Port and

Ocean Engineering, Norway, Chalmers Institute of Technology, Department of Hydraulics, Sweden, and on postgraduate courses arranged by the Norwegian Society of Chartered Engineers. The key topics discussed include: ship dimensions and ship wind; layout of port and channels; manoeuvring and berthing operations; safety aspects in layout and design of berth structures; design loads on berth structures; solid and open berth structures; corrosion of steel sheet piles; fender design; and deterioration and repair of concrete in marine environments.

Surprise, Kill, Vanish

Crick and Watson's discovery of the structure of DNA fifty years ago marked one of the great turning points in the history of science. Biology, immunology, medicine and genetics have all been radically transformed in the succeeding half-century, and the double helix has become an icon of our times. This fascinating exploration of a scientific phenomenon provides a lucid and engaging account of the background and context for the discovery, its significance and afterlife, while a series of essays by leading scientists, historians and commentators offers uniquely individual perspectives on DNA and its impact on modern science and society.

Reverse Shoulder Arthroplasty

As the complexity of software increases, researchers and practitioners continue to seek better techniques for engineering the construction of evolution of

software. Partial evaluation is an attractive technology for modern software construction since it provides automatic tools for software specialization and is based on rigorous semantic foundations. This book is based on a school held at DIKU Copenhagen, Denmark in summer 1998 during which leading researchers summarized the state of the art in partial evaluation. The lectures presented survey the foundations of partial evaluation in a clear and rigorous manner and practically introduce several existing partial evaluators with numerous examples. The second part of the book is devoted to more sophisticated theoretical aspects, advances systems and applications, and highlights open problems and challenges. The book is ideally suited for advanced courses and for self study.

History of Nordic Computing 3

A cumulative list of works represented by Library of Congress printed cards.

International Law and the Cold War

Refiguring the Archive at once expresses cutting-edge debates on 'the archive' in South Africa and internationally, and pushes the boundaries of those debates. It brings together prominent thinkers from a range of disciplines, mainly South Africans but a number from other countries. Traditionally archives have been seen as preserving memory and as holding the past. The contributors to this book question this orthodoxy, unfolding the ways in which archives

construct, sanctify, and bury pasts. In his contribution, Jacques Derrida (an instantly recognisable name in intellectual discourse worldwide) shows how remembering can never be separated from forgetting, and argues that the archive is about the future rather than the past. Collectively the contributors demonstrate the degree to which thinking about archives is embracing new realities and new possibilities. The book expresses a confidence in claiming for archival discourse previously unentered terrains. It serves as an early manual for a time that has already begun.

Glass Construction Manual

Offers a concise and accessible presentation of important concepts for beginning designers, and experienced practitioners will appreciate its insightful and practical coverage of the relationship between building structures and interior spaces. A broad range of rich illustrations communicates visual information and ploughs fertile ground for creative ideas and inspiration.

Design and Construction of Berm Breakwaters

The current economic situation has highlighted deficiencies in corporate governance while also showing the importance of stakeholder relations. It has also raised the profile of the debates regarding corporate social responsibility and shown the inter-relationship with governance. And the two together

are essential for sustainable business. The social and environmental contexts of business are generally considered to be as significant as the economic and financial contexts and good governance will address all of these aspects. The combination of these aspects offers long term benefits for a firm, such as reducing risk and attracting new investors, shareholders and more equity as well as sustainable performance. Written by experts from all over the world, *A Handbook of Corporate Governance and Social Responsibility* is the most authoritative single-volume guide to the relationship between good governance and social responsibility and the reality of managing both. In addition to the theory and practice of governance and CSR, the book includes case studies from large and small organizations and NGOs to highlight examples of good and bad practice, and to show international and cultural similarities and differences while at the same time furthering the debate regarding the relationship between good governance and social responsibility.

Handbook of Driver Assistance Systems

"Provides a significant overview of the matter of mental health and wellbeing with particular reference to educational contexts Presents an authoritative and diverse account of: links between wellbeing and learning; interventions and initiatives in the field; evidence based practice guidelines; policy and practice examples." -- Back cover.

Mental Health and Wellbeing

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Port Designer's Handbook

This open access book provides a comprehensive examination of the European Landing Obligation policy from many relevant perspectives. It includes evaluations of its impacts at economical, socio-cultural, ecological and institutional levels. It also discusses the feasibility and benefits of several potential mitigation strategies. The book was timely published, exactly at the time where the Landing Obligation was planned to be fully implemented. This book is of significant interest to all stakeholders involved, but also to the general public of Europe and to other jurisdictions throughout the world that are also searching for ways to deal with by-catch and

discard issues.

Methods of Seawater Analysis

This book is developed from and includes the presentations of leading international experts and scholars in the 12-14 July, 2006 Wingspread Workshop. With urban waters as a focal point, this book will explore the links between urban water quality and hydrology, and the broader concepts of green cities and smart growth. It also addresses legal and social barriers to urban ecological sustainability and proposes practical ways to overcome those barriers. Cities of the Future features chapters containing visionary concepts on how to ensure that cities and their water resources become ecologically sustainable and are able to provide clean water for all beneficial uses. The book links North American and Worldwide experience and approaches. The book is primarily a professional reference aimed at a wide interdisciplinary audience, including universities, consultants, environmental advocacy groups and legal environmental professionals.

Current Catalog

«Facade Construction Manual» provides a systematic survey of contemporary expertise in the application of new materials and energy-efficient technologies in facade design. It surveys the facade design requirements made by various types of buildings, as well as the most important materials, from natural stone through to synthetics, and documents a

diversity of construction forms for a wide range of building types.

Incontinance

This book presents a number of new methods, tools, and approaches aimed to assist researchers and designers during the early stages of the design process, focusing on the need to approach the development of new interactive products, systems and related services by closely observing the needs of potential end-users through adopting a design thinking approach. A wide range of design approaches are explored, some emphasizing on the physicality of interaction and the products designed, others exploring interactive design and the emerging user experience (UX) with a focus on the value to the end-user. Contemporary design processes and the role of software tools to support design are also discussed. The researchers draw their expertise from a wide range of fields and it is this interdisciplinary approach which provides a unique perspective resulting in a flexible collection of methods that can be applied to a wide range of design contexts. Interaction and UX designers and product design specialists will all find *Collaboration in Creative Design* an essential read.

Cities of the Future

Computing in the Nordic countries started in late 1940s mainly as an engineering activity to build computing devices to perform mathematical calculations and assist mathematicians and engineers

in scientific problem solving. The early computers of the Nordic countries emerged during the 1950s and had names like BARK, BESK, DASK, SMIL, SARA, ESKO, and NUSSE. Each of them became a nucleus in institutes and centres for mathematical computations programmed and used by highly qualified professionals. However, one should not forget the punched-card machine technology at this time that had existed for several decades. In addition, we have a Nordic name, namely Frederik Rosing Bull, contributing to the fundamentals of punched card technology and forming the French company Bull. Commercial products such as FACIT EDB and SAAB D20-series computers in Sweden, the Danish GIER computer, the Nokia MIKKO computer in Finland, as well as the computers of Norsk Data in Norway followed the early computers. In many cases, however, companies and institutions did not further develop or exploit Nordic computing hardware, even though it exhibited technical advantages. Consequently, in the 1970s, US computers, primarily from IBM, flooded the Nordic market.

International Books in Print

This book analyses various aspects of social responsibility, corporate responsibility, sustainability and governance. Rather than focusing narrowly on a single perspective, it investigates a number of problems and scenarios that can all be considered an aspect of one of these fields, and shows how they are all related to each other and to the problems and issues facing businesses. This approach is based on

the tradition of the Social Responsibility Research Network, which in its 15-year history has sought to broaden the discourse and to treat all research in these areas as inter-related and relevant to business. The book collects the best papers presented at the 15th International Conference on Corporate Social Responsibility and 6th Organisational Governance Conference held in Melbourne, Australia in September 2016.

Port Design

This is the first book to examine in detail the relationship between the Cold War and International Law.

Aptitude for Destruction, Volume 2

Since the book first appeared in 1976, *Methods of Seawater Analysis* has found widespread acceptance as a reliable and detailed source of information. Its second extended and revised edition published in 1983 reflected the rapid pace of instrumental and methodological evolution in the preceding years. The development has lost nothing of its momentum, and many methods and procedures still suffering their teething troubles then have now matured into dependable tools for the analyst. This is especially evident for trace and ultra-trace analyses of organic and inorganic seawater constituents which have diversified considerably and now require more space for their description than before. Methods to determine volatile halocarbons, dimethyl sulphide,

photosynthetic pigments and natural radioactive tracers have been added as well as applications of X-ray fluorescence spectroscopy and various electrochemical methods for trace metal analysis. Another method not previously described deals with the determination of the partial pressure of carbon dioxide as part of standardised procedures to describe the marine CO₂ system.

Arts & Humanities Citation Index

DIV In the world of interior design, thousands of bits of crucial information are scattered across a wide array of sources. The Interior Design Reference & Specification Book collects the information essential to planning and executing interior projects of all shapes and sizes, and distills it in a format that is as easy to use as it is to carry. You'll also find interviews with top practitioners drawn across the field of interior design. —Fundamentals provides a step-by-step overview of an interiors project, describing the scope of professional services, the project schedule, and the design and presentation tools used by designers. —Space examines ways of composing rooms as spatial environments while speaking to functional and life-safety concerns. —Surface identifies options in color, material, texture, and pattern, while addressing maintenance and performance issues. —Environments looks at aspects of interior design that help create a specific mood or character, such as natural and artificial lighting, sound and smell. —Elements describes the selection and specification of furniture and fixtures, as well as other components

essential to an interior environment, such as artwork and accessories. —Resources gathers a wealth of useful data, from sustainability guidelines to online sources for interiors-related research. /div
