The fourth edition of *Developing Clinical Proficiency in Athletic Training: A Modular Approach* takes the skills that athletic training students need and organizes them into a modular system that will help students progressively develop while providing instructors with a systematic means of assessing their students' learning. The manual presents a flexible system consisting of three levels that are broken down into 146 modules used for assessing students' clinical skill development over the course of their athletic training program. The text is presented in such a way that it allows instructors to adjust the order of presentation of the modules while maintaining a complete record of the competencies achieved. Previously titled *Assessing Clinical Proficiencies in Athletic Training*, this latest edition guides students and clinical instructors through the maze of educational competencies required of entry-level athletic trainers. All of the current National Athletic Trainers' Association (NATA) Athletic Training Competencies are embedded in the text. Because it covers all the competencies, this workbook can be used in conjunction with any athletic training text. The NATA competencies are noted in each module and are cross-referenced in an appendix. The following are new features of the fourth edition: -Coauthor Dr. Kirk Brumels joins author Ken Knight as a veteran clinic educator and a longtime user of the modular system. -The 26 new modules enhance

the existing modules and improve the coverage of competencies from the previous edition. -Three new groups of modules are included: Developing Clinical Skill, The Body, and Professional Development.” -A new module, Foundational Behaviors of Professional Practice, has been added to all three levels to ensure that students and clinical instructors have an ongoing dialogue concerning these behaviors. In the fourth edition of Developing Clinical Proficiency in Athletic Training, the authors have reduced the number of levels from four to three and increased the number of modules in order to give instructors greater flexibility in adapting the text to their curriculums. They also have included more introductory material to help students and instructors better understand the integrated nature of athletic training education, and they discuss the nature of critical thinking and why it is essential to clinical practice. The text's unique concept allows for multiple evaluations of proficiencies in the classroom, laboratory, and clinical settings. Through the modules, students are given the opportunity to demonstrate mastery of clinical proficiencies as instructors gauge their competencies across multiple exposures throughout the training experience. This approach ensures that students demonstrate both knowledge and the practical skills they need in order to be successful athletic trainers. As such, it is a great tool for instructors and the jump-start that students need as they prepare to move into their careers as athletic trainers. Developing Clinical Proficiency in Athletic Training, Fourth Edition, is part of Human Kinetics' Athletic Training Education Series. Featuring the work of respected athletic training authorities, this collection of six outstanding textbooks, each with its own supporting instructional resources, parallels and expounds on the content areas in the accreditation standards of the NATA Educational Council.

Peer Assisted Learning (PAL) involves children in school consciously assisting others to learn, and in so doing learning more effectively themselves. It encompasses peer tutoring, peer modeling, peer education, peer counseling, peer monitoring, and peer assessment, which are differentiated from other more general "co-operative learning" methods. PAL is not diluted or surrogate "teaching"; it complements and supplements (but never replaces) professional teaching--capitalizing on the unique qualities and richness of peer interaction and helping students become empowered democratically to take more responsibility for their own learning. In this book, PAL is presented as a set of dynamic, robust, effective, and flexible approaches to teaching and learning, which can be used in a range of different settings. The chapters provide descriptions of good practice blended with research findings on effectiveness. They describe procedures that can be applied to all areas of the school curriculum, and can be used with learners of all levels of ability, including gifted students, students with disabilities, and second-language learners. Among the distinguished contributors, many are from North America, while others are from Europe and Australia. The applicability of the methods they present is worldwide. Peer-Assisted Learning is designed to be accessible and useful to teachers and to those who employ, train, support, consult with, and evaluate them. Many chapters will be helpful to teachers aiming to replicate in their own school environments the cost-effective procedures described. A practical resources guide is included. This volume will also be of interest to faculty and researchers in the fields of education and psychology, to community educators who want to learn about the implications of Peer Assisted Learning beyond school contexts, and to employers and others involved in post-school training.

In the fourth edition of *Developing Clinical Proficiency in Athletic Training*, the authors have reduced the number of levels from four to three and increased the number of modules in order to give instructors greater flexibility in adapting the text to their curriculums. They also have included more introductory material to help students and instructors better understand the integrated nature of athletic training education, and they discuss the nature of critical thinking and why it is essential to clinical practice. The text's unique concept allows for multiple evaluations of proficiencies in the classroom, laboratory, and clinical settings. Through the modules, students are given the opportunity to demonstrate mastery of clinical proficiencies as instructors gauge their competencies across multiple exposures throughout the training experience. This approach ensures that students demonstrate both knowledge and the practical skills they need in order to be successful athletic trainers. As such, it is a great tool for instructors and the jump-start that students

Practical Exam Preparation Guide of Clinical Skills for Athletic Training is a new study guide for the athletic training student that will aid in preparation for the practical portion of the NATABOC certification exam. This learning tool will also serve as a means of developing entry-level clinical skills as part of the Learning Over Time concept. The majority of clinical skills included in this book are specific outcomes of Clinical Proficiencies referenced in the NATA Athletic Training Educational Competencies. The user-friendly format makes this study tool a valuable component of exam preparation. The student will be able to learn, practice, and test clinical skills with an easy-to-follow checklist design. The clinical educator will also benefit from this useful reference as a way to document when clinical skills have been taught, practiced, evaluated and mastered by the student. The learning of these skills is a key component in the future mastery of clinical proficiencies. Clinical Education documentation is a commonly weak program area and is a major focus of *Practical Exam Preparation Guide of Clinical Skills for Athletic Training*. A rating scale makes it easy to see when and where a clinical skill has met the minimum standard set by an individual program. Another added benefit is the inclusion of weighted practical exams that can be used by the student for studying or by the clinical educator for testing and assessment. Perfect for the student or

educator, Practical Exam Preparation Guide of Clinical Skills for Athletic Training provides a wealth of information in one handy reference, from practical exams to clinical skills. This comprehensive resource is necessary for all the field of athletic training. Features: 3 weighted practical exams. Easy-to-follow checklist design. Clinical Education documentation.
