More than 100,000 entrepreneurs rely on this book for detailed, step-by-step

Download Ebook Beta Zero Owners Manual

instructions on building successful, scalable, profitable startups. The National Science Foundation pays hundreds of startup teams each year to follow the process outlined in the book, and it's taught at Stanford, Berkeley, Columbia and more than 100 other leading universities worldwide. Why? The Startup Owner's Manual guides you, step-by-step, as you put the Customer Development process to work. This method was created by renowned Silicon Valley startup expert Steve Blank, co-creator with Eric Ries of the "Lean Startup" movement and tested and refined by him for more than a decade. This 608-page how-to guide includes over 100 charts, graphs, and diagrams, plus 77 valuable checklists that guide you as you drive your company toward profitability. It will help you:

- Avoid the 9 deadly sins that destroy startups' chances for success
- Use the Customer Development method to bring your business idea to life
- Incorporate the Business Model Canvas as the organizing principle for startup hypotheses
- Identify your customers and determine how to "get, keep and grow" customers profitably
- Compute how you'll drive your startup to repeatable, scalable profits.

The Startup Owner's Manual was originally published by K&S Ranch Publishing Inc. and is now available from Wiley. The cover, design, and content are the same as the prior release and should not be considered a new or updated product.

Convert Theory into Solutions: A Corporate Finance Reality Check This hands-on guide to corporate finance focuses on converting the theory and models in corporate finance into tools that can be used to analyze, understand and help any business. Applied Corporate Finance provides a user's perspective to corporate finance, by posing the three major questions that every business has to answer, and then providing the tools and the analytical techniques needed to answer them. The three questions are- * Where do we invest our resources? (The Investment Decision) The first part of the book looks at how to assess risk and develop a risk profile for a firm, convert this risk profile into a hurdle rate, and develops the basic rules that need to be followed in estimating the returns on any investment. * How should we fund these investments? (The Financing Decision) Firms generally can use debt, equity or some combination of the two to fund projects. This part of the book examines the relationship between this choice and the hurdle rate to be used in analyzing projects, and presents ways in which the financing decision can be used to maximize firm value. It also sets up a framework for picking the right kind of security for any firm. * How much cash can and should we return to the owners? (The Dividend Decision) The third part of the book establishes a process that can be used to decide how much cash should be taken out of the business, and in what form - dividends or stock buybacks. The final chapter in the book ties in the value of the firm to these three decisions, and provides insight into how firms can enhance value. In summary, this is a book about coming up with real solutions to real problems, using real-time data on real companies.

SAWS

APL/360 User's Manual

This instrument is designed for the detection and measurement of a group of ionizing radiations. Interchangeable ionization chambers have been constructed for the measurement of (1) beta and gamma radiations, (2) surface and hand monitoring of alpha radiations, (3) alpha and beta radiation of dust samples collected in precipitron tubes, and (4) fast neutrons. Moderate to high radiation intensities are measured by direct continuous deflection of a microammeter indicating changes in plate current of a 1LN5 tube used as an electrometer tube. Low intensities of radiation are measured by allowing the charge due to the ionization current to collect on one plate of a condenser. The other plate connects to the grid of the electrometer tube and to ground through a high resistance. During the period of charge collection the two condenser plates are electrically shielded from one another by a grounded metal vane inserted between them. On removing this vane the charge on the first plate of the condenser is communicated to the second plate and thus to the tube grid. A transient meter deflection then occurs proportional to the product of ionization current and ion collection time. A two pole, triple throw switch allows the output meter to be connected in test 1

position to measure screen grid current, in test 2 position to set tube voltages to reproducible values, and in "Operate" position to measure changes in plate current.

LIMDEP User's Manual and Reference Guide

Micro Saint Sharp is a general purpose, discrete-event simulation software tool. Micro Saint Sharp's intuitive graphical user interface and flow chart approach to modeling make it a tool that can be used by generalists as well as simulation experts. Micro Saint Sharp has proven to be an invaluable asset in both small businesses and Fortune 500 companies and in many areas including the military, human factors, health care, manufacturing, and the service industry. The user manual has been updated for software version 3.8. Some new features are the ability to add swim lanes to any network background, data exchange capability with the UML/SysML tool MagicDraw, and a updated version of the built-in OptQuest optimization.

The report is a supplement to IQSY Instruction Manual No. 10, Cosmic Ray Tables by McCracken, et al. (1965), and contains the asymptotic directions, variational coefficients and cutoff rigidities for 48 stations not included in the original manual in addition to an explanatory text. The computer programs utilized to calculate the values given in the tables are given in the appendix.
