Molecular Biology of the Gene

Saleem Sinai is born at the stroke of midnight on August 15, 1947, the very moment of India's independence. Greeted by fireworks displays, cheering crowds, and Prime Minister Nehru himself, Saleem grows up to learn the ominous consequences of this coincidence. His every act is mirrored and magnified in events that sway the course of national affairs; his health and well-being are inextricably bound to those of his nation; his life is inseparable, at times indistinguishable, from the history of his country. Perhaps most remarkable are the telepathic powers linking him with India's 1,000 other "midnight's children," all born in that initial hour and endowed with magical gifts. This novel is at once a fascinating family saga and an astonishing evocation of a vast land and its people—a brilliant incarnation of the universal human comedy. *Midnight's Children* stands apart as both an epochal work of fiction and a brilliant performance by one of the great literary voices of our time. From the Trade Paperback edition.

The Autobiography of Malcolm X

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant

to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

'I was born in Tuckahoe I have no accurate knowledge of my age, never having seen any authentic record containing it. By far the larger part of the slaves know as little of their ages as horses know of theirs, and it is the wish of most masters within my knowledge to keep their slaves thus ignorant.' Thus begins the autobiography of Frederick Douglass (1818-1895) who was born into slavery in Maryland and after his escape to Massachusetts in 1838 became an ardent abolitionist and campaigner for women's rights. His Narrative, which became an instant bestseller on publication in 1845, describes his life as a slave, the cruelty he suffered at the hands of his masters, his struggle to educate himself and his fight for freedom. Passionately written, often using striking biblical imagery, the Narrative came to assume epic proportions as a founding anti-slavery text in which Douglass carefully crafted both his life story and his persona. This new edition examines Douglass, the man and the myth, his complex relationship with women and the enduring power of his book. It includes extracts from Douglass's primary sources and examples of his writing on women's rights.

The Outsiders

50 years of an iconic classic! This international bestseller and inspiration for a beloved movie is a heroic story of friendship and belonging. No one ever said life was easy. But Ponyboy is pretty sure that he's got things figured out. He knows that he can count on his brothers, Darry and Sodapop. And he knows that he can count on his friends—true friends who would do anything for him, like Johnny and Two-Bit. But not on much else besides trouble with the Socs, a vicious gang of rich kids whose idea of a good time is beating up on “greasers” like Ponyboy. At least he knows what to expect—until the night someone takes things too far. *The Outsiders* is a dramatic and enduring work of fiction that laid the groundwork for the YA genre. S. E. Hinton's classic story of a boy who finds himself on the outskirts of regular society remains as powerful today as it was the day it was first published. "The Outsiders transformed young-adult fiction from a genre mostly about prom queens, football players and high school crushes to one that portrayed a darker, truer world." —The New York Times "Taut with tension, filled with

Preparing for the Biology AP Exam

In April 1992 a young man from a well-to-do family hitchhiked to Alaska and walked alone into the wilderness north of Mt. McKinley. His name was Christopher Johnson McCandless. He had given \$25,000 in savings to charity, abandoned his car and most of his possessions, burned all the cash in his wallet, and invented a new life for himself. Four months later, his decomposed body was found by a moose hunter. How McCandless came to die is the unforgettable story of *Into the Wild*. Immediately after graduating from college in 1991, McCandless had roamed through the West and Southwest on a vision quest like those made by his heroes Jack London and John Muir. In the Mojave Desert he abandoned his car, stripped it of its license plates, and burned all of his cash. He would give himself a new name, Alexander Supertramp, and, unencumbered by money and belongings, he would be free to wallow in the raw, unfiltered experiences that nature presented. Craving a blank spot on the map, McCandless simply threw the maps away. Leaving behind his desperate parents and sister, he vanished into the wild. Jon Krakauer constructs a clarifying prism through which he reassembles the disquieting facts of McCandless's

short life. Admitting an interest that borders on obsession, he searches for the clues to the drives and desires that propelled McCandless. Digging deeply, he takes an inherently compelling mystery and unravels the larger riddles it holds: the profound pull of the American wilderness on our imagination; the allure of high-risk activities to young men of a certain cast of mind; the complex, charged bond between fathers and sons. When McCandless's innocent mistakes turn out to be irreversible and fatal, he becomes the stuff of tabloid headlines and is dismissed for his naiveté, pretensions, and hubris. He is said to have had a death wish but wanting to die is a very different thing from being compelled to look over the edge. Krakauer brings McCandless's uncompromising pilgrimage out of the shadows, and the peril, adversity, and renunciation sought by this enigmatic young man are illuminated with a rare understanding--and not an ounce of sentimentality. Mesmerizing, heartbreaking, *Into the Wild* is a tour de force. The power and luminosity of Jon Krakauer's storytelling blaze through every page. From the Trade Paperback edition.

Spiritual, religious, sacred, or mystical experiences may be broadly defined as subjective human experiences that appear to the person undergoing them, or to others, to convey or imply contact with or knowledge about a transcendent power, presence, or superior reality beyond the realm of the physical. Research has shown that these forms of awareness of 'something beyond' are of considerable significance

in the ordinary lives of very many people, as well as being elements of signal importance in the origin and development of religion: not least by deepening characteristically spiritual or religious attitudes, emotions, beliefs, values and practices, along with fundamental orientations of life and quests for meaning. This Studyguide provides a succinct and lucid introduction to the subject for those studying religion at both undergraduate and GCE AS/A level. By exploring the key areas of both the empirical and theoretical study of religious and spiritual experience, the Studyguide will serve as an accessible and nonpartisan guide to enable its readers to explore the range of challenging data, debates, approaches, and issues that relate to the study of this widespread and significant phenomenon.

Now available as an eBook for the very first time! • ONE OF TIME'S TEN MOST IMPORTANT NONFICTION BOOKS OF THE TWENTIETH CENTURY In the searing pages of this classic autobiography, originally published in 1964, Malcolm X, the Muslim leader, firebrand, and anti-integrationist, tells the extraordinary story of his life and the growth of the Black Muslim movement. His fascinating perspective on the lies and limitations of the American Dream, and the inherent racism in a society that denies its nonwhite citizens the opportunity to dream, gives extraordinary insight into the most urgent issues of our own time. as the definitive statement of a movement and a man whose work was never completed but whose message is timeless. It is essential reading for anyone who wants to understand America. Praise for The Autobiography of Malcolm X “Malcolm X’s autobiography seemed to offer something different. His repeated acts of self-creation spoke to me; the blunt poetry of his words, his unadorned insistence on respect, promised a new and uncompromising order, martial in its discipline, forged through sheer force of will.”—Barack Obama, *Dreams from My Father* “Extraordinary . . . a brilliant, painful, important book.”—The New York Times “A great book . . . Its dead level honesty, its passion, its exalted purpose, will make it stand as a monument to the most painful truth.”—The Nation “The most important book I’ll ever read, it changed the way I thought, it changed the way I acted. It has given me courage I didn’t know I had inside me. I’m one of hundreds of thousands whose lives were changed for the better.”—Spike Lee “This book will have a permanent place in the literature of the Afro-American struggle.”—I. F. Stone

New information on hot topics like DNA fingerprinting, contraception, stem cell research, and obesity draws students into the material, while a flexible topic structure allows instructors to choose a chapter sequence to meet virtually any need. "Biogeochemistry considers how the basic chemical conditions of the Earth—from atmosphere to soil to seawater—have been and are being affected by the existence of life. Human activities in particular, from the rapid consumption of resources to the destruction of the rainforests and the expansion of smog-covered cities, are leading to rapid changes in the basic chemistry of the Earth. This expansive text pulls together the numerous fields of study encompassed by biogeochemistry to analyze the increasing demands of the growing human population on limited resources and the resulting changes in the planet's chemical makeup. The book helps students extrapolate small-scale examples to the global level, and also discusses the instrumentation being used by NASA and its role in studies of global change. Study Guide: Sg Concepts in Biology

As a botanist, Robin Wall Kimmerer has been trained to ask questions of nature with the tools of science. As a member of the Citizen Potawatomi Nation, she embraces the notion that plants and animals are our oldest teachers. In *Braiding Sweetgrass*, Kimmerer brings these two lenses of knowledge together to take us on “a journey that is every bit as mythic as it is scientific, as sacred as it is historical, as clever as it is wise” (Elizabeth Gilbert). Drawing on her life as an indigenous scientist, and as a woman, Kimmerer shows how other living beings—asters and goldenrod, strawberries and squash, salamanders, algae, and sweetgrass—offer us gifts and lessons, even if we've forgotten how to hear their voices. In reflections that range from the creation of Turtle Island to the forces that threaten its flourishing today, she circles toward a central argument: that the awakening of ecological consciousness requires the acknowledgment and celebration of our reciprocal relationship with the rest of the living world. For only when we can hear the languages of other beings will we be capable of understanding the generosity of the earth, and learn to give our own gifts in return.
