Learning Financial Accounting can often feel like learning a foreign language to students, in particular when terminology and procedure is piled on before core concepts are truly mastered. Introductory Financial Accounting for Business is an innovative approach that emphasizes critical thinking over the rote memorization of terms, such as “debits” and “credits”. The sequential learning model employed by the authors helps students see the bottom-line consequences of financial statements as it relates to the overall business, better preparing them for careers as accountants, entrepreneurs, and decision-makers. The authors focus initially on conceptual underpinnings -- the reasons why we approach procedures the way we do – rather than confusing students by front-loading the material with over-complicated details. Author Chris Edmonds has also created a highly popular and widely used series of video lectures, which engage students by clearly and charismatically going over each learning objective in a conversational style. These

videos help reinforce important lessons and are always available for review. By developing this stronger foundation, students understand Accounting ideas more broadly and are able to ultimately learn procedural applications more quickly and accurately. With a straightforward writing style and highly engaging video lectures, this dynamic author team leads students down a streamlined learning path focused on critical thinking, clarity of concept, and applicability of material to the real world.

Edmonds: Fundamental Financial Accounting Concepts is a unique entrant in the college market that fits a growing audience of non-accounting majors, yet provides a solid foundation in accounting principles for future accounting students. The Edmonds approach, which focuses on core concepts within a decision-making context, better prepares future managers for the corporate world in which they will be users of financial information. It is a conceptually based book that stresses meaningful learning over rote memorization. More specifically, the text focuses on the relationships between business events and financial statements. The primary objective is for students to develop and explain how a particular business event can affect the income statement, balance sheet, and the cash flow statement. Did the event cause assets to increase, decrease, or stay the same? Similarly, what was its effect on liabilities, equity, revenue, expense, gains, losses, net income, and

dividends? Furthermore, how did the event affect cash flow? These are the big picture relationships that both accounting majors and general business students need to understand to function effectively in the business world. The text contains numerous innovative features that are designed to facilitate the students' comprehension of the events affecting financial statements.
