As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz -- rich cars, poor quality. There's only one Saturn you should buy. Toyota -- enough apologies: "when you mess up, 'fess up."

John Haynes

Near the beginning of *The Autobiography of an Execution*, David Dow lays his cards on the table. "People think that because I am against the death penalty and don't think people should be executed, that I forgive those people for what they did. Well, it isn't my place to forgive people, and if it were, I probably wouldn't. I'm a judgmental and not very forgiving guy. Just ask my wife." It's this spellbinding true

crime narrative, Dow takes us inside of prisons, inside the complicated minds of judges, inside execution-administration chambers, into the lives of death row inmates (some shown to be innocent, others not) and even into his own home--where the toll of working on these gnarled and difficult cases is perhaps inevitably paid. He sheds insight onto unexpected phenomena-- how even religious lawyer and justices can evince deep rooted support for putting criminals to death-- and makes palpable the suspense that clings to every word and action when human lives hang in the balance.

Maximum Boost

Enables chemical engineering students to bridge theory and practice Integrating scientific principles with practical engineering experience, this text enables readers to master the fundamentals of chemical processing and apply their knowledge of such topics as material and energy balances, transport phenomena, reactor design, and separations across a broad range of chemical industries. The author skillfully guides readers step by step through the execution of both chemical process analysis and equipment design. Principles of Chemical Engineering Practice is divided into two sections: the Macroscopic View and the Microscopic View. The Macroscopic View examines equipment design and behavior from the vantage point of inlet and outlet conditions. The Microscopic View is focused on the equipment interior resulting from conditions prevailing at the equipment boundaries. As readers progress through the text, they'll learn to master such chemical engineering operations and equipment as: Separators to divide a mixture into parts with desirable concentrations Reactors to produce chemicals with needed properties Pressure changers to create favorable equilibrium and rate conditions Temperature changers and heat exchangers to regulate and change the temperature of process streams Throughout the book, the author sets forth examples that refer to a detailed simulation of a process for the manufacture of acrylic acid that provides a unifying thread for equipment sizing in context. The manufacture of hexyl glucoside provides a thread for process design and synthesis. Presenting basic thermodynamics, Principles of Chemical Engineering Practice enables students in chemical engineering and related disciplines to master and apply the fundamentals and to proceed to more advanced studies in chemical engineering.
