Filosofía para la vida

Technological advances and changes in government policy and regulation have altered the electric power industry in recent years and will continue to impact it for quite some time. Fully updated with the latest changes to regulation, structure, and technology, this new edition of Understanding Electric Power Systems offers a real-world view of the industry, explaining how it operates, how it is structured, and how electricity is regulated and priced. It includes extensive references for the reader and will be especially useful to lawyers, government officials, regulators, engineers, and students, as well as the general public. The book explains the physical functioning of electric power systems, the electric power business in today's environment, and the related institutions, including recent changes in the roles of the Federal Energy Regulatory Commission and the North American Reliability Company. Significant changes that are affecting the industry are covered in this new edition, including: The expanded role of the federal government in the planning and operation of the nation's electric utilities New energy laws and a large number of FERC regulations implementing these laws Concerns over global warming and potential impacts on the electric industry Pressures for expansion of the electric grid and the implementation of "smart-grid" technologies The growing importance of various energy-storage technologies and renewable energy sources New nuclear generation technologies The 2009 economic stimulus package

Bending History

Manejo de las crisis en anestesia

The whole world has been talking about carbon credits, carbon trading and emissions targets. But not enough has been said about the people whose activities contribute to those emissions or about those who will be most affected by climate change, especially women. How do population dynamics affect greenhouse gases and climate change? Will urbanization and an ageing population help or hinder efforts to adapt to a warming world? And could better reproductive health care and improved relations between women and men make a difference in the fight against climate change? The linkages between population and climate change are in most cases complex and indirect. But the nature of these linkages is becoming clear enough to arrive at the key recommendations of this report for mitigating climate change and aiding adaptation to it: elicit a new level of engagement by Governments in the areas of population and development, provide access to reproductive health and actively support gender equality.

Climate Crisis

Too Many People?

Master's Thesis from the year 2019 in the subject Economics - Other, grade: GPA 4.0, City University London (School of Mathematics and Engineering), course: Air Transport Management, language: English, abstract: In the past 15 years, various ultra long-haul routes were operated by airlines from different regions across the globe. Between 2004 and 2013, the majority of ultra long-haul routes were axed mainly due to the increase in jet fuel prices. Despite negative developments in the past, current airlines still operate or intend to operate ultra long-haul routes while other airlines and various experts highly question the feasibility of cost-intensive services. Can ultra long-haul flights be profitable at all? Due to the lack of clear academic evidence, the author Linus Benjamin Bauer aims to enhance and update the current debate, whether ultra long-haul flights in general are either commercially viable or not. Key findings from Bauer's comprehensive analysis and developed revenue-cost model conclude that due to the improvement of fuel-efficient long-range aircraft such as the Boeing 787 Dreamliner and Airbus A350, ultra long-haul operations nowadays may prove to be resilient. The cost advantages of such cost-intensive operations may be slight compared to one-stop services. However, ultra long-haul routes are likely to make up for it in market positioning by targeting premium customer segments with lower price sensitivity, one of the main drivers of the profitability of the 21st century airline business.

Envejecimiento Poblacional

The acclaimed historian demonstrates a link between climate change and social unrest across the globe during the mid-17th century. Revolutions, droughts, famines, invasions, wars, regicides, government collapses—the calamities of the mid-seventeenth century were unprecedented in both frequency and severity. The effects of what historians call the "General Crisis" extended from England to Japan

and from the Russian Empire to sub-Saharan Africa and the Americas. In this meticulously researched volume, historian Geoffrey Parker presents the firsthand testimony of men and women who experienced the many political, economic, and social crises that occurred between 1618 to the late 1680s. He also incorporates the scientific evidence of climate change during this period into the narrative, offering a strikingly new understanding of the General Crisis. Changes in weather patterns, especially longer winters and cooler and wetter summers, disrupted growing seasons and destroyed harvests. This in turn brought hunger, malnutrition, and disease; and as material conditions worsened, wars, rebellions, and revolutions rocked the world.

CEPAL Review

Rural Migration in Bolivia

"This story is a tragedy, and not just because of what's happening to the people of Kivalina. It's a tragedy because it's unnecessary, the product, as the author shows, of calculation, deception, manipulation, and greed in some of the biggest and richest companies on earth." —Bill McKibben, author *Eaarth: Making a Life on a Tough New Planet* "Christine Shearer's *Kivalina: A Climate Change Story* is a fast and bumpy ride that begins with the history of outrageous corporate deceptions through public relations and legal campaigns, continuing with building of the coal-and-oil empire to fuel progress in the United States, leading to the horrendous politics of climate crisis, and finally arriving at its destination, a ground-zero of climate refugee, Kivalina—an Inupiat community along the Chukchi Sea coast of arctic Alaska. I was angry when I turned the last page. I urge you to get a copy, read it, share the story, and join the new global climate justice movement."—Subhankar Banerjee, photographer, writer, activist, and author of *Arctic National Wildlife Refuge: Seasons of Life and Land* While corporate funded scientists continue their effort to spread doubt about global climate change, for one native village in Alaska, the price of further denial could be the complete devastation of their homes and culture. Kivalina must be relocated to survive, but neither the oil giants nor the government have proven willing to take responsibility. Christine Shearer is a writer, journalist, activist, and academic. She is the environment and ecology editor of *Economy Watch*, and managing editor of the online progressive magazine *Conducive*. She is also a contributor to *Coalswarm*, part of the online corporate watch website *SourceWatch*.

Trade and Development Report 2009

Kivalina

The volatility of climate change is increasing. It is bad news, and many climatologists, policy analysts and environmental groups regard the West as the largest contributor to the problems caused by climate change. This book raises questions concerning the systemic and cultural reasons for Western countries' unwillingness to bear full responsibility for their carbon emissions. Is the Western

paradigm failing? Can other cultures offer solutions? Are there alternatives for designing a better future? Just as the roots of the problem of climate change are cultural, the solution must be too. The contributors to Global Ethics on Climate Change explore cultural alternatives. This differs from conventional climate ethics, which tends to address the crisis with utilitarian, legalistic, and analytic tools. The authors in this volume doubt whether such paradigm patches will work. It may be time to think outside the box and consider non-Western insights about the good life, indigenous wisdom on being-in-the-world, and new ideas for civil evolution. This book is an examination of candidates for a Plan B. This book was published as a special issue of the Journal of Global Ethics.

Using Mixed Methods to Study Intersectionality in Higher Education

Too Many People? provides a clear, well-documented, and popularly written refutation of the idea that "overpopulation" is a major cause of environmental destruction, arguing that a focus on human numbers not only misunderstands the causes of the crisis, it dangerously weakens the movement for real solutions. No other book challenges modern overpopulation theory so clearly and comprehensively, providing invaluable insights for the layperson and environmental scholars alike. Ian Angus is editor of the ecosocialist journal Climate and Capitalism, and Simon Butler is co-editor of Green Left Weekly.

Crisis y transformación. Una perspectiva de política económica

A systematic examination by the best writers in a variety of fields working on issues of how climate change affects society, and how social, economic, and political systems can, do, and should respond.

The 2009 Pfeiffer Annual

This publication is issued annually by the Economic Development Division of the Economic Commission for Latin America and the Caribbean (ECLAC). This sixty-third edition of the Economic Survey looks at the nature of the recovery from the financial global and economic crisis whose fallout spread across the region in the second half of 2008 and in 2009. It also delves into the challenges posed by highly liquid conditions in international financial markets combined with high prices for the region's key commodities. Finally, it analyzes the situation in the countries of Latin America and the Caribbean during 2010 into the first part of 2011

The Oxford Handbook of Climate Change and Society

Panorama de la inserción internacional de América Latina y el Caribe

California Water Plan Update 2009: Resource management

strategies

El Estado mundial de la infancia de 2011. La adolescencia: una época de oportunidades examina el estado general de los adolescentes; describe los desafíos que enfrentan en materia de salud, educación, protección y participación; y explora los riesgos y la vulnerabilidad en esta etapa crucial. El informe pone de relieve las oportunidades singulares que ofrece la adolescencia, tanto para los propios adolescentes como para las sociedades en las que viven. Las pruebas empíricas muestran que la inversión en la segunda década de los adolescentes es nuestra mejor esperanza para romper el ciclo intergeneracional de la pobreza y la falta de equidad, y de sentar las bases para un mundo más pacífico, tolerante y equitativo.

Understanding Electric Power Systems

Ecology and Revolution: Global Crisis and the Political Challenge is an in-depth exploration and analysis of the global ecological crisis (going far beyond the issue of global warming) in the larger context of historical conditions and political options shaped by the failure (and incapacity) of the existing political system to adequately confront the crisis.

Media Clipping 2009 International Potato Center

Modeling Public Policies in Latin America and the Caribbean

Curious readers will discover how the world's climate is changing from the greenhouse effect and the ozone hole, and what we are doing to help our planet.

The Commercial Viability of Ultra Long-Haul Operations. Evidence from Qantas' Perth-London Service

Anuario estadístico de América Latina y el Caribe

Recopilación de ensayos que reflexionan sobre los tiempos actuales de crisis y transformación económica. Los distintos autores han querido contribuir a rendir un homenaje especial al profesor Emérit Bono en el momento de su jubilación. Todos ellos reconocen una paternidad intelectual inestimable al profesor Emérit Bono, como pionero de la enseñanza y la investigación de la política y la transformación económica. Se analizan aquí tres grandes ámbitos, que se corresponden con tres ejes nucleares de preocupación intelectual de Emérit Bono: la política económica como disciplina y empeño teórico, tratada en diferentes niveles de concreción; el desarrollo humano sostenible, que incorpora variables sociales y ecológicas a los enfoques convencionales; el País Valenciano como realidad económica y social, sus condicionamientos estructurales y sus retos de futuro.

UNFPA State of World Population 2009

The Practice of Adaptive Leadership will help you think more clearly and execute better in a constantly shifting environment. It offers a comprehensive and systematic approach to candidly assessing the situation and yourself, and then taking action. Its wisdom and advice are drawn from the experiences of people like you, committed to advancing what you care about most. The book is anchored in the framework of adaptive leadership, but goes beyond the theory to provide a practical set of stories, diagrams, techniques, and activities that will help you both assess and address the toughest challenges that lie ahead. Dozens of tools and tactics are presented in an exciting, clear, and reader-friendly design.

Ecology and Revolution

Climate Change: Stimulating a Green Recovery" looks at the global problem of climate change. With the world apparently on an economic recovery path, policymakers are looking at ways to limit the impact of climate change through broad international action. One of the challenges is to balance actions to mitigate climate change with measures to stimulate growth and prosperity. This issue of F&D also examines a variety of issues raised by the crisis--including the future of macroeconomics, explored by William White, former chief economist at the Bank for International Settlements, and the longer-term impact of the crisis on the United States, the world's largest economy. Our "People in Economics" profile spotlights Joseph Stiglitz, the Nobel Laureate who "can't get any respect at home." We also look at the need for rebalancing growth in Asia, which is leading the world out of recession, and we interview five influential Asians on the region's fragile rebound. We turn our "Straight Talk" column over to Barbara Stocking of Oxfam, who makes a forceful case for stepping up help to the most vulnerable around the world. "Data Spotlight" looks at trends in inflation, which has fallen into negative territory in some countries during the crisis, and in "Point-Counterpoint," two experts discuss the pros and cons of remittances--funds repatriated by migrant workers to family and friends back home. "Back to Basics" gives a primer on international trade.

Comunicación y medio ambiente, el pacto imposible

This is a theoretical and practical guide on how to undertake and navigate advanced research in the arts, humanities and social sciences.

Sophisticated Estate Planning Techniques

Global Crisis

'Think globally, act locally' has become a call to environmentalist mobilization, proposing a closer connection between global concerns, local issues and individual responsibility. A History of Environmentalism explores this dialectic relationship, with ten contributors from a range of disciplines providing a history of environmentalism which frames global themes and narrates local stories. Each of the chapters in this volume addresses specific struggles in the history of environmental movements, for example over national parks, species protection,

forests, waste, contamination, nuclear energy and expropriation. A diverse range of environments and environmental actors are covered, including the communities in the Amazonian Forest, the antelope in Tibet, atomic power plants in Europe and oil and politics in the Niger Delta. The chapters demonstrate how these conflicts make visible the intricate connections between local and global, the body and the environment, and power and nature. A History of Environmentalism tells us much about transformations of cultural perceptions and ways of production and consuming, as well as ecological and social changes. More than offering an exhaustive picture of the entire environmentalist movement, A History of Environmentalism highlights the importance of the experience of environmentalism within local communities. It offers a worldwide and polyphonic perspective, making it key reading for students and scholars of global and environmental history and political ecology.

The Subprime Mortgage Crisis

Los Vaqueros Reservoir Expansion Project

A History of Environmentalism

By the time of Barack Obama's inauguration as the 44th president of the United States, he had already developed an ambitious foreign policy vision. By his own account, he sought to bend the arc of history toward greater justice, freedom, and peace; within a year he was awarded the Nobel Peace Prize, largely for that promise. In *Bending History*, Martin Indyk, Kenneth Lieberthal, and Michael O'Hanlon measure Obama not only against the record of his predecessors and the immediate challenges of the day, but also against his own soaring rhetoric and inspiring goals. *Bending History* assesses the considerable accomplishments as well as the failures and seeks to explain what has happened. Obama's best work has been on major and pressing foreign policy challenges—counterterrorism policy, including the daring raid that eliminated Osama bin Laden; the "reset" with Russia; managing the increasingly significant relationship with China; and handling the rogue states of Iran and North Korea. Policy on resolving the Israeli-Palestinian conflict, however, has reflected serious flaws in both strategy and execution. Afghanistan policy has been plagued by inconsistent messaging and teamwork. On important "softer" security issues—from energy and climate policy to problems in Africa and Mexico—the record is mixed. As for his early aspiration to reshape the international order, according greater roles and responsibilities to rising powers, Obama's efforts have been well-conceived but of limited effectiveness. On issues of secondary importance, Obama has been disciplined in avoiding fruitless disputes (as with Chavez in Venezuela and Castro in Cuba) and insisting that others take the lead (as with Qaddafi in Libya). Notwithstanding several missteps, he has generally managed well the complex challenges of the Arab awakenings, striving to strike the right balance between U.S. values and interests. The authors see Obama's foreign policy to date as a triumph of discipline and realism over ideology. He has been neither the transformative beacon his devotees have wanted, nor the weak apologist for America that his critics allege. They conclude that his grand strategy

for promoting American interests in a tumultuous world may only now be emerging, and may yet be curtailed by conflict with Iran. Most of all, they argue that he or his successor will have to embrace U.S. economic renewal as the core foreign policy and national security challenge of the future.

Una mirada a la crisis desde los márgenes

The Practice of Adaptive Leadership

Una guía filosófica dinámica para vivir bien el día a día y ser feliz Filosofía para vivir nos invita a asistir a una escuela ideal con un revolucionario profesorado formado por doce grandes filósofos de todos los tiempos. Cada lección nos muestra una técnica que, además de ser muy práctica, viene acompañada de extraordinarias historias de gente corriente que las aplican en su día a día -desde marines hasta magos, astronautas, anarquistas, psicólogos, soldados Cuando la filosofía le ayudó a superar varias depresiones, Jules Evans quedó fascinado al comprobar que algunas ideas de hace hasta 2.000 años todavía nos pueden ser muy útiles hoy. De forma divertida e inspiradora, el autor nos enseña cómo utilizar la filosofía en la calle, en el trabajo, en el campo de batalla, en el amor y en otras situaciones peligrosas para ser más felices, más sabios y más fuertes.

La revolución industrial en Europa y América Latina

The Trade and Development Report 2008, subtitled "Commodity Prices, Capital Flows and the Financing of Investment, highlights the paradox that the capital poor developing world is exporting capital to the capital rich developed countries. The Report suggests shifting the focus in financial policies from households "putting more money aside" and imports of "foreign savings," to the reinvestment of profits and credit creation through the domestic banking system.

Los Angeles Magazine

This book illustrates the role played by nations and organizations in providing the necessary weather and climate data and products, and describes the contributions of nations towards the implementation of global observing and information systems, research programs and intergovernmental assessments to provide policy-makers with a clear representation of the climate system, including climate variability and change.--Publisher's description.

Estado Mundial de la Infancia 2011

This volume offers institutional researchers several examples of the ways in which quantitative and qualitative methods can be integrated for a better grasp of how members of our educational communities understand and experience their environments on the basis of their multiple identities. The first two chapters provide context for the volume's theme with definitions and overview of the underpinnings of mixed methodology. Subsequent chapters illustrate the multiple ways in which qualitative and quantitative methods can be integrated to understand the

complexity of identity and experiences of marginalized groups in the academy. Other chapters focus on students' experiences and demonstrate how mixed-methodology approaches were used to explore college access among first-generation Asian Americans and Pacific Islanders analyze racial ideology of white males with interview data driving analysis of longitudinal dataset and research and assessment generating accurate understanding of how race and gender shape students' experiences within the campus. The final chapter presents findings of a mixed-methods inquiry to challenge current conceptions about racial categorization and practices for gathering institutional data on students' identity. Volume editors Kimberly A Griffin, assistant professor of education policy studies at the Pennsylvania State University, and Samuel D. Museus, assistant professor of educational administration at University of Hawai'i Manoa, and contributing authors advocate for intersectionality research and argue that it holds great promise for advancing knowledge in higher education. Their book is ideal for institutions and institutional researchers who want to understand and most effectively serve their students and faculty. This is the 151st volume of the Jossey-Bass quarterly report series New Directions for Institutional Research. Always timely and comprehensive, New Directions for Institutional Research provides planners and administrators in all types of academic institutions with guidelines in such areas as resource coordination, information analysis, program evaluation, and institutional management.

Global Ethics on Climate Change

21st Century Geography

In *Statehood under Water*, Alejandra Torres Camprubí closely examines how sea-level rise and the Anthropocene challenge the different dimensions of statehood, and engages with the conceptual and policy innovations necessary to address the fight for continuity of low-lying Pacific Island States.

Statehood under Water

La largamente esperada revisión de esta obra dedicada al manejo de las crisis en anestesia ofrece una perspectiva actualizada de las teorías, los principios y las prácticas de más reciente desarrollo en el campo de la anestesia. De gran utilidad para anestesiólogos, profesionales de enfermería anestésica, y médicos y residentes de Urgencias, esta nueva edición ofrece las claves para afrontar todo tipo de incidencias relacionadas con la anestesia. Identifica y da respuesta a una amplia gama de situaciones de riesgo vital, recogidas en la sección "Catálogo de acontecimientos críticos en anestesia", en la que se analizan las contingencias que pueden darse durante la cirugía, y se detallan los pasos necesarios para responder a las crisis y resolverlas adecuadamente. Constituye una revisión de la máxima utilidad para los profesionales de la anestesia sobre los conocimientos fundamentales relativos al diagnóstico y el manejo de los acontecimientos críticos.
