Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most

syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

CISA and CISM are NOT pure technical certs. In fact they tend to focus more on the policies/programs, auditing and management side of IS. There are technical questions but the questions are not like those that you find in the MS/Cisco exams. You need to know the basics of new IT technologies but you also need to know the older technologies since many old stuff are still at work in the modern business

world. CISA and CISM are supposed to be different in that one focuses on auditing and another on management. HOWEVER, they are practically sharing many of the knowledge areas. This book focuses more on the audit track. We also reference the latest available guidelines published by ISACA. This book comes with knowledge material created referencing the Job Practice Areas 2016. When we develop our material we do not classify topics the BOK way. We follow our own flow of instructions which we think is more logical for the overall learning process. Don't worry, it does not hurt to do so, as long as you truly comprehend the material. To succeed in the exams, you need to read as many reference books as possible. There is no single book that can cover everything!
