added coverage of communication issues in countries such as Australia, China, Canada, and Brazil — to give speech-language pathology students and speech-language pathologists a balanced and global perspective on the most topical multicultural communication issues of today. Comprehensive coverage focuses on a wide variety of cultural and age populations. Cutting-edge research and data offer up-to-date discussions based on the latest studies in multiculturalism as it relates to the SLP and AuD professions. Diverse panel of expert authors include some of the top researchers and clinicians in the field. Additional resources provide a focused listing of print and electronic sources at the end of each chapter to support more in-depth study of a particular subject. Chapter on international perspectives tackles issues in countries such as Australia, Canada, China, and Brazil to give you a more global understanding of communication disorders. The latest statistics from the 2010 U.S. Census report offers the most current data available. Increased content on older adults covers the multicultural issues, voice disorders, and neurogenic disorders particular to this important demographic. Case studies give you practice solving realistic clinical problems. Chapter overview and conclusion outline the key information in each chapter and serve as a checklist for content mastery.

### **Analysis of Communication and Swallowing in the Sleep Apnea Population**

The ability to communicate is critical for people with life-threatening conditions.

With loss of communication, they can no longer control their health care, make necessary financial and legal arrangements, or remain close to the family and friends whose support they desperately need. The ability to eat safely is no less critical. When eating becomes so difficult that it loses all enjoyment, patients usually eat too little and their health rapidly declines. These two vital aspects of managing a degenerative disease are typically the responsibility of the speech-language pathologist. Yorkston, Miller, and Strand, speech-language pathologists at a neuromuscular speech and swallowing disorders clinic, set forth the state-of-the-art in compassionate and effective speech and swallowing intervention for four degenerative diseases: amyotrophic lateral sclerosis (ALS), Parkinson's disease, Huntington's disease, and multiple sclerosis (MS). Because restoration of normal speech is an unrealistic goal, the authors emphasize ways to preserve functional communication. They present compensatory techniques for the typical features of each dysarthria and illustrate how to introduce augmentative communication gradually to supplement natural speech, ensuring a smooth transition to nonvocal communication. The authors stress the importance of maintaining adequate hydration and caloric intake in the face of progressive dysphagia. For each stage of involvement, they suggest compensatory strategies and dietary modifications you can implement to allow the patient to eat as safely and independently as possible. You'll read about the different feeding tube options and the transition to supplementary tube feedings, then to complete alimentation by tube. You'll find scales for rating the deterioration of speech and swallowing in ALS, Parkinson's

disease, Huntington's disease, and MS, plus reproducible clinical interview and evaluation forms. The patient and family education section provides handouts about normal speech and swallowing, information about each of the four diseases, and compensatory techniques for speech and swallowing that you can customize for each individual. With *Management of Speech and Swallowing in Degenerative Diseases*, Yorkston, Miller, and Strand have made an important contribution to improving the quality of care and the quality of life for people living with progressive neuromuscular disease.

### **Counseling Individuals with Communication Disorders**

Cancer and its treatments typically have multiple and devastating effects on swallowing, speech, voice, language, respiratory and hearing systems. The successful management and rehabilitation of this challenging and high-risk patient population requires team-based collaboration and clinical expertise. Including contributions from skilled multidisciplinary experts, *Swallowing Intervention in Oncology* is a valuable resource providing medical and health care professionals with comprehensive and pertinent clinical information. It is the first text to discuss completely and thoroughly the causes and treatment of dysphagia in persons with head and neck cancer, emphasizing the absolute need for successful team management.

## **Parkinson's Disease**

This completely updated edition is a unique resource designed to teach caregivers how to help persons with Alzheimer's disease communicate despite dementia and deterioration of their memory, understanding, speech, language, and social skills. A series of in-service units focuses on specific aspects of communication in long-term care settings. By following the recommendations in the units, caregivers and family members will be prepared to support patients' communication efforts, improve their own communication skills, and understand how to avoid breakdowns in communication. A series of "how-to" in-service programs make this resource extremely practical and easy to use. Real-life examples, case studies, and scripts from actual encounters with patients help readers see how to apply concepts to the patient care setting. Self-study questionnaires, checklists, and quizzes reinforce the material. Useful, full-page charts highlight key information and are ideal as overheads in training sessions. Suggestions for group interaction, role playing, and patient activities provide strategies for effective communication. A new chapter addresses issues related to communicating with persons in the last stages of Alzheimer's disease. Two additional appendices (a Model Case Study and Sample Scripts) provide examples of how the concepts apply in real-life situations. Learning Objectives have been added to the beginning of each chapter, along with the Standard Outline, Premise, and Definitions features, to set a clear course for the teacher and student. The overheads in Appendix II have been reformatted for

Despite the relevance of eating disorders in the past years, the pure core of these mental disorders remains unknown. In this regard, it is not a surprise that the biopsychosocial model is the best way to go forward in order to understand and to improve the different approaches, biological (mainly neurobiological), psychological, and social, in managing these disorders. Eating disorders are frequent pathologies, many times severe and often devastating for patients and their families. Biological, psychological, and social factors are always involved in these disorders, and knowledge about the influence of these factors helps us to

### Communication Disorders in Multicultural Populations - E-Book

Communication and Swallow Changes in Healthy Aging Adults compiles and presents the available research on healthy aging adults performance and abilities in the following areas: auditory comprehension, reading comprehension, speaking, writing, voice and motor speech abilities, cognition, and swallowing. This text also presents principles from the World Health Organization's International Classification of Functioning, Disability and Health and its applications to aging adults. One of the first texts to cover these principles, this book will address the need for a comprehensive view of communication and swallow issues in aging for students of speech-language pathology. Speech-language pathologist students will learn how to fully compare what would be considered normal for their elderly patients rather than overestimating or underestimating what aging adults are capable of doing. Knowing what would be considered within the spectrum of normal, will help speech-language pathologists to address therapy as effectively as possible. Having this information at hand is particularly important as the nation's population is aging at a rapid rate and there is a need for evidence-based practice in speech-language pathology. Written in an easy to follow format, Communication
