This book compiles a series of case studies derived from archaeological excavation in Greek cultural contexts in the Mediterranean (ca. 800-100 B.C), addressing the current state of the field, the goals and direction of Greek archaeology, and its place in archaeological thought and practice. Overviews of archaeological sites and analyses of assemblages and contexts explore how new forms of data; methods of data recovery and analysis; and sampling strategies have affected the discourse in classical archaeology and the range of research questions and strategies at our disposal. Recent excavations and field practices are steering the way that we approach Greek cultural landscapes and form broader theoretical perspectives, while generating new research questions and interpretive frameworks that in turn affect how we sample sites, collect and study material remains, and ultimately construct the archaeological record. The book confronts the implications of an integrated dialogue between realms of data and interpretive methodologies, addressing how reengagement with the site, assemblage, or artifact, from the excavation context can structure the way that we link archaeological and systemic contexts in classical archaeology.

Compressors

This practical reference provides in-depth information required to understand and properly estimate compressor capabilities and to select the proper designs. Engineers and students will gain a thorough understanding of compression principles, equipment, applications, selection, sizing, installation, and maintenance. The many examples clearly illustrate key aspects to help readers understand the "real world" of compressor technology. *Compressors: Selection and Sizing*, third edition is completely updated with new API standards. Additions requested by readers include a new section on diaphragm compressors in the reciprocating compressors chapter, and a new section on rotor dynamics stability in the chapter on diaphragm compressors. The latest technology is presented in the areas of efficiency, 3-D geometry, electronics, CAD, and the use of plant computers. The critical chapter on negotiating the purchase of a compressor now reflects current industry practices for preparing detailed specifications, bid

evaluations, engineering reviews, and installation. A key chapter compares the reliability of various types of compressors. * Everything you need to select the right compressor for your specific application. * Practical information on compression principles, equipment, applications, selection, sizing, installation, and maintenance. * New sections on diaphragm compressors and an introduction to rotor dynamics stability.

The book combines history with academic notes for use at the university level, presenting design examples from actual jobs with applications and detailing for the practicing engineer. Chapter 1 tells the history of post-tensioned concrete as only Ken Bondy can tell it. Chapters 2-8 are the notes Dirk Bondy uses to teach Design of Prestressed Concrete Structures at UCLA and Cal Poly-San Luis Obispo. Chapters 9-13 are design examples that address many of the decisions faced by practicing engineers on typical projects. Chapters 13-14 cover the art of detailing and observing the construction of post-tensioned concrete. This knowledge was obtained over many years of working on our own projects and listening and learning from the the pioneers of post-tensioned concrete. Chapter 15 covers the slab on grade industry, which represents more sales of post-tensioning tendons than all other post-tensioning applications combined. Chapter 16 discusses the challenging application of post-tensioning-external post-tensioning.

Volume II of The Official History of the UK Strategic Nuclear Deterrent provides an authoritative and in-depth examination of the British government's strategic nuclear policy from 1964 to 1970. Written with full access to the UK documentary record, Volume II examines the controversies that developed over nuclear policy following the arrival in office of a Labour government led by Harold Wilson in October 1964 that openly questioned the independence of the deterrent. Having decided to preserve the Polaris programme, Labour ministers were nevertheless committed not to develop another generation of nuclear weapons beyond those in the pipeline, placing major doubts over the long-term future of the nuclear programme and collaboration with the United States. Defence planners also became increasingly concerned that the deployment of Soviet anti-ballistic missile (ABM) defences around Moscow threatened to undermine the ability of Polaris to fulfil its role as a national strategic nuclear deterrent. During 1967, under heavy

pressures to control defence spending, a protracted debate was conducted within Whitehall over the future of Polaris and how to respond to the evolving ABM challenge. The volume concludes with Labour's defeat at the general election of June 1970, by which time the Royal Navy had assumed the nuclear deterrent role from the RAF, and plans had already been formulated for a UK project to improve Polaris which could both ensure its continuing credibility and rejuvenate the Anglo-American nuclear relationship. This book will be of much interest to students of British politics, Cold War history, nuclear proliferation and international relations.

So when Emily's dashing husband died on safari soon after their wedding, she felt little grief. After all, she barely knew him. Now, nearly two years later, she discovers that Philip was a far different man from the one she had married so cavalierly. His journals reveal him to have been a gentleman scholar and antiquities collector who, to her surprise, was deeply in love with his wife. Emily becomes fascinated with this new image of her dead husband and she immerses herself in all things ancient and begins to study Greek. Emily's intellectual pursuits and her desire to learn more about Philip take her to the quiet corridors of the British Museum, one of her husband's favorite places. There, amid priceless ancient statues, she uncovers a dark, dangerous secret involving stolen artifacts from the Greco-Roman galleries. And to complicate matters, she's juggling two very prominent and wealthy suitors, one of whose intentions may go beyond the marrying kind. As she sets out to solve the crime, her search leads to more surprises about Philip and

causes her to question the role in Victorian society to which she, as a woman, is relegated.
