*Revolution and Its Past* is a comprehensive study of China from the last quarter of the eighteenth century through to 2018. A fascinating and dramatic narrative, the book compels interest both as a history of an ancient civilization developing into a modern nation-state and as an account of how the Chinese as a people have struggled and continue to work to find their identity in the modern world. Beginning in the last two decades of the reign of the Qianlong emperor (1736–1795), the book provides a baseline that allows readers to understand China's rapid decline in the nineteenth and part of the twentieth century, and extends into the present day, a time when China has the second largest economy in the world and aims to become a leading global power by 2050. The vast changes that have swept over China between these times are probed through the lens of the broad and important theme of "identities." This fourth edition has been updated throughout, providing a more thorough examination of recent history since 1960, and increasing coverage of such topics as "new Qing history," frontier and ethnicity, women and their roles, environmental concerns and issues, and globalization. Supported by

maps, images, tables, online eResources and suggestions for further reading, and written in an engaging, concise, and authoritative style, *Revolution and Its Past* is the ideal textbook for all students of the history of modern China.

In *OBJECT THINKING*, esteemed object technologist David West contends that the mindset makes the programmer—not the tools and techniques. Delving into the history, philosophy, and even politics of object-oriented programming, West reveals how the best programmers rely on analysis and conceptualization—on thinking—rather than formal process and methods. Both provocative and pragmatic, this book gives form to what’s primarily been an oral tradition among the field’s revolutionary thinkers—and it illustrates specific object-behavior practices that you can adopt for true object design and superior results. Gain an in-depth understanding of: Prerequisites and principles of object thinking. Object knowledge implicit in eXtreme Programming (XP) and Agile software development. Object conceptualization and modeling. Metaphors, vocabulary, and design for object development. Learn viable techniques for: Decomposing complex domains in terms of objects. Identifying object relationships, interactions, and constraints. Relating object behavior to internal structure and implementation design. Incorporating object thinking into XP and Agile practice.
