In the bestselling tradition of *The Fred Factor* and *What the CEO Wants You to Know*, bestselling author and quality guru Subir Chowdhury (*The Power of Six Sigma*), tackles a question that has haunted him in his consulting work with companies for years. Why is it that some companies improve 50x, while others improve only incrementally? The ideas and training, after all, is the same. What is the difference? That is the question he tackles in this compelling and empowering new book. In *The Difference*, Subir Chowdhury looks at what distinguishes a company that adopts his quality training processes, and improves 5x, versus a company that adopts the same training and consulting, but increases their profits and quality 50x. The difference, he claims, is this short, engaging, and insightful book, is the people in your workplace, on your staff, in your executive offices. The best processes and training programs in the world will not lead to world-class operations, unless a company first looks to the people who make up their workforce. Only by creating a "caring mindset" -- a culture built upon straightforwardness, honest and openness; a management structure that thinks about the concerns of their people; a workplace that inspires accountability and engagement; and managers and employees who tackle the challenges they face with perseverance and resolve, can companies flourish and excel.

World Economic Forum Founder and Executive Chairman Klaus Schwab offers a practical companion and field guide to his previous book, *The Fourth Industrial Revolution*. Today, technology is changing everything--how we relate to one another, the way we work, how our economies and governments function, and even what it means to be human. One need not look hard to see how the incredible advances in artificial intelligence, cryptocurrencies, biotechnologies, and the internet of things are transforming society in unprecedented ways. But the Fourth Industrial Revolution is just beginning, says Schwab. And at a time of such tremendous uncertainty and such rapid change, he argues it's our actions as individuals and leaders that will determine the trajectory our future will take. We all have a responsibility - as citizens, businesses, and institutions - to work with the current of progress, not against it, to build a future that is ethical, inclusive, sustainable and prosperous. Drawing on contributions from 200 top experts in fields ranging from machine learning to geoengineering to nanotechnology, to data ethics, Schwab equips readers with the practical tools to leverage the technologies of the future to leave the world better, safer, and more resilient than we found it.

H1N1 ("swine flu"), SARS, mad cow disease, and HIV/AIDS are a few examples of zoonotic diseases--diseases transmitted between humans and animals. Zoonotic diseases are a growing concern given multiple factors: their often novel and unpredictable nature, their ability to emerge anywhere and spread rapidly around the globe, and their major economic toll on several disparate industries. Infectious disease surveillance systems are used to detect this threat to human and animal health. By systematically collecting data on the occurrence of infectious diseases in humans and animals, investigators can track the spread of disease and provide an early warning to human and animal health officials, nationally and internationally, for follow-up and response. Unfortunately, and for many reasons, current disease surveillance has been ineffective or untimely in alerting officials to emerging zoonotic diseases. Sustaining Global Surveillance and Response to Emerging Zoonotic Diseases assesses some of the disease surveillance systems around the world, and recommends ways to improve early detection and response. The book presents solutions for improved coordination between human and animal health sectors, and among governments and international organizations. Parties seeking to improve the detection and response to zoonotic diseases--including U.S. government and international health policy makers, researchers, epidemiologists, human health clinicians, and veterinarians--can use this book to help curtail the threat zoonotic diseases pose to economies, societies, and health.

**Shaping the Future of the Fourth Industrial Revolution**

Parkinson's disease (PD) is the second most common neurodegenerative disorder results due to loss of dopamine producing brain cells. Knowledge relating to PD condition has been known since 5000BC, however no effective therapeutic strategies are available till today. Therefore it is important for neurobiologists to work further by taking advantage of modern scientific

methods and develop appropriate therapeutic strategies. Efforts in this direction are worthy as they will reduce the burden of PD among elderly, who are already burdened with age related systemic degenerative processes. This book is a humble effort in that progressive direction. It has chapters covering multiple aspects relating to etiology, pathophysiology of PD, available and futuristic therapeutics strategies. Therefore it will be of interest to common man, biomedical researchers and clinicians. This is one small step in a direction "to reduce the burden of neurological disease."

CREATING GOOD HEALTH! This book follows Volume I, First-Aid & Common Conditions. It takes you on a similar journey to quickly understand and utilize the most well-known and accepted methods of natural, holistic, alternative medicines available today. It is your handy reference manual to readily find complementary methods of treating dozens of Dis-Ease Conditions for you and your loved ones of all ages. Revealed is a system of medicine successfully and widely practiced in many countries around the world that have been difficult to source in the US? until now. You'll learn how to get to the bottom of issues rather than masking symptoms. You will find a number of resources that can be brought to your alternative practitioner as options?to be explored together. All packaged in a simple, easy-to-understand format that gives you power over your health choices. The information is straightforward and compares available protocols. For a limited time, this First Edition comes with a FREE companion book, THE ALTERNATIVE CONTINUED, Secrets to Success. With purchase, you will receive a link for this easily downloadable bonus book with an additional 150+ pages of extended descriptions of remedies and practitioner protocols. Learn the benefits of alternative, holistic medicine, take control of your healthcare, get to the bottom of what's ailing you, and learn alternative options available to you. Inside this book, you'll

discover: Insights to little-known therapies? Solutions for achieving a new level of health? Protocols rarely revealed? "The best person to heal you is YOU and I created THE ALTERNATIVE to be your guide." - The Author If you already embrace a holistic lifestyle you will be pleasantly surprised with the tools revealed in this book that can be added to your knowledge base. Be empowered in your health choices by taking action today to learn a new way to be the best you can be. Holistic health methods may be the answer you have been looking for. "It can be liberating to transition from medical management to self-directed health and wellness." - Statements made in this book not evaluated by the FDA.

## **Parkinson's Disease**

### **Text Book of Materia Medica**

"Mucuna pruriens" is a bean that grows in the tropics. It is very rich in natural levodopa that is better tolerated and more potent than the synthetic levodopa in Sinemet or Stalevo. Two prestigious neurologists have patented extracts of mucuna seeds as a treatment for Parkinson's. Meanwhile, patients have recorded their positive experiences with mucuna; they buy it online (no prescription needed) and use it in secrecy without consulting their neurologist. Neither the patients nor the doctors (most of them) have clear ideas about this plant, its ingredients (not only levodopa), the proportions in which it is absorbed, or how to manage it. "Mucuna versus Parkinson: Natural Levodopa Treatment" is so far the most complete and up-to-date monograph on the subject, it describes the theoretical and practical approaches to the use of this plant as a treatment option for Parkinson's disease. Also included are more than one hundred of references.
