Education and Development in Zimbabwe

"Poverty increased in Zimbabwe in all sectors of the economy during the 1990s. This book provides reasons for the increase in poverty using several analytical techniques including nonparametric and parametric statistical methods. This book is part of a series of studies completed under the Poverty Dynamics in Africa Initiative designed to make use of the vastly improved household survey data in Africa. This series intends to enhance understanding of poverty trends in the region, and to frame more successful poverty-reducing policies for the future."

The universality of the problematics with urban education, together with the importance of understanding the context of improvement interventions, brings into sharp focus the importance of an undertaking like the International Handbook of Urban Education. An important focus of this book is the interrogation of both the social and political factors that lead to different problem posing and subsequent solutions within each region.

This book offers a pluralistic vision of the way economists have dealt with the question of power in society over the last two centuries. Economists' ideas about power are examined from political, theoretical and policy-making points of view, with additional discussion of the active participation of economists in the management of power. The book is organized into four main conceptions of power relations: i) Power as embedded in political institutions; ii) Power as emerging from the asymmetric relations caused by the unequal distribution of income and wealth; iii) Power as associated to the monopolistic or oligopolistic position held by some firms in the market; and iv) Power as the management of economic policies by the state. Mosca brings together contributions from a range of scholars to analyse how economists have considered the role of power, putting the discussion into a much needed historical context.

Becoming Zimbabwe is the first comprehensive history of Zimbabwe, spanning the years from 850 to 2008. In 1997, the then Secretary General of the Zimbabwe Congress of Trade unions, Morgan Tsvangirai, expressed the need for a "more open and critical process of writing history in ZimbabweThe history of a nation-in-the-making should not be reduced to a selective heroic tradition, but should be a tolerant and continuing process of questioning and

re-examination.' Becoming Zimbabwe tracks the idea of national belonging and citizenship and explores the nature of state rule, the changing contours of the political economy, and the regional and international dimensions of the country's history. In their Introduction, Brian Raftopoulos and Alois Mlambo enlarge on these themes and Gerald Mazarire's opening chapter sets the pre-colonial background. Sabelo Ndlovu tracks the history up to WWII and Alois Mlambo reviews developments in the settler economy and the emergence of nationalism leading to UDI in 1965. The politics and economics of the UDI period, and the subsequent war of liberation, are covered by Joseph Mtisi, Munyaradzi Nyakudya and Teresa Barnes. After independence in 1980, Zimbabwe enjoyed a period of buoyancy and hope. James Muzondidya's chapter details the transition 'from buoyancy to crisis', and Brian Raftopoulos concludes the book with an analysis of the decade-long crisis and the global political agreement which followed. economy in Zimbabwe. It challenges scholars to think about the role of education, its funding and the egalitarian approach to widening access to education. The nexus between education, democracy and policy change is a complex one. The book provides an illuminating account of the constantly evolving notions of national identity, language and citizenship from the Zimbabwean experience. The book discusses educational successes and challenges by examining the ideological effects of social, political and economic considerations on Zimbabwe's colonial and postcolonial education. Currently, literature on current educational challenges in Zimbabwe is lacking and there is very little published material on these ideological effects on educational development in Zimbabwe. This book is likely to be one of the first on the impact of social, political and economic meltdown on education. The book is targeted at local and international academics and scholars of history of education and comparative education, scholars of international education and development, undergraduate and graduate students, and professors who are interested in educational development in Africa, particularly Zimbabwe. Notwithstanding, the book is a valuable resource to policy makers, educational administrators and researchers and the wider community. Shizha and Kariwo's book is an important and illuminating addition on the effects of social, political and economic trajectories on education and development in Zimbabwe. It critically analyses the crucial specifics of the Zimbabwean situation by providing an in depth discourse on education at this historical juncture. The book offers new insights that may be useful for an understanding

of not only the Zimbabwean case, but also education in other African countries. Rosemary Gordon, Senior Lecturer in Educational Foundations, University of Zimbabwe Ranging in temporal scope from the colonial era and its elitist legacy through the golden era of populist, universal elementary education to the disarray of contemporary socioeconomic crisis; covering elementary through higher education and touching thematically on everything from the pernicious effects of social adjustment programmes through the local deprofessionalization of teaching, this text provides a comprehensive, wide ranging and yet carefully detailed account of education in Zimbabwe. This engagingly written portrayal will prove illuminating not only to readers interested in Zimbabwe's education specifically but more widely to all who are interested in how the sociopolitical shapes education- how ideology, policy, international pressures, economic factors and shifts in values collectively forge the historical and contemporary character of a country's education. The conference was held in Harare, Zimbabwe 25th - 29th August 1997. CapBIT '97 was the first time that the IFIP Technical Committee for Education had held a conference in a developing country. When the Computer Society of Zimbabwe offered to host the event, we determined that the location and conference topic reflect the importance of issues facing countries at all stages of development—especially Information Technologies (IT) development. Information Technologies have become, within a short time, one of the basic building blocks of modern industrial society. Understanding IT, and mastering basic skills and concepts of IT, are now regarded as part of the core education of all people around the world, alongside reading and writing. IT now permeates the business environment and underpins the success of modern corporations as well as providing government with cost-effective civil service systems. At the same time, the tools and technologies of IT are of value in the process of learning, and in the organisation and management of learning institutions.

processes from various angles in an effort to understand how peri-urban areas develop, function, and how their residents survive. Peri-urban dwellers currently face numerous challenges, including land tenure insecurity, poor infrastructure and services, land use conflicts, stringent planning law and land use planning regulations. This work seeks to address the “knowledge gap” on peri-urban development processes in Africa, and is also intended to inform urban policy practice in the African Cities and beyond. Offering policy makers valuable insights on the peri-urban space, it provides guidance for decision-making in the contexts of service delivery, land management, housing, new town development and place marketing, among others.

resources, neither of which were achieved. The seeds of economic decline were sown soon after independence in unsustainably high government spending, which was financed by private savings, stifling private investment and inhibiting employment creation. The burden of adjustment was borne disproportionately by the rural poor, who fared worse than those already in urban employment. Zimbabwe's experience provides valuable lessons for countries struggling with the trade offs between growth-orientated and redistributive policies.

"An Inquiry into the Nature and Causes of the Wealth of Nations (generally referred to by the short title The Wealth of Nations) is the masterpiece of the Scottish economist and moral philosopher Adam Smith. It was first published in 1776. It is an account of economics at the dawn of the Industrial Revolution, as well as a rhetorical piece written for the generally educated individual of the 18th century - advocating a free market economy as more productive and more beneficial to society. The book is often considered to have laid the basic groundwork for modern economic theory" -- from Wikipedia.
