Emergency Management in Health Care

Aimed at health care professionals, this book looks beyond traditional information systems and shows how hospitals and other health care providers can attain a competitive edge. Speaking practitioner to practitioner, the authors explain how they use information technology to manage their health care institutions and to support the delivery of clinical care. This second edition incorporates the far-reaching advances of the last few years, which have moved the field of health informatics from the realm of theory into that of practice. Major new themes, such as a national information infrastructure and community networks, guidelines for case management, and community education and resource centres are added, while such topics as clinical and blood banking have been thoroughly updated.

Construction Planning and Scheduling

Nurses are already nurse managers. They must manage patient caseloads and care plans as well as supervise aides, technicians, and other care providers. But moving from this type of organic management to a defined nurse manager role is not a natural progression. Nurse managers must command a vast, diverse, and robust skill set, and those skills must first be defined, explained, and operationalized for success. In an environment that offers new managers little support, where do they turn? The Nurse Manager's Survival Guide (4th Ed.) provides an overview of a nurse manager's major roles and responsibilities—all the

fundamentals needed for success in one easy-to-use, consolidated, practical reference. From tips on building the right team to budgeting basics, time-management tools, and advice on taking care of one's self (and their team), author Tina Marrelli supplies the resources nurse managers need to excel in day-to-day operations.

TRB's Airport Cooperative Research Program (ACRP) Report 25, Airport Passenger Terminal Planning and Design comprises a guidebook, spreadsheet models, and a user's guide in two volumes and a CD-ROM intended to provide guidance in planning and developing airport passenger terminals and to assist users in analyzing common issues related to airport terminal planning and design. Volume 1 of ACRP Report 25 explores the passenger terminal planning process and provides, in a single reference document, the important criteria and requirements needed to help address emerging trends and develop potential solutions for airport passenger terminals. Volume 1 addresses the airside, terminal building, and landside components of the terminal complex. Volume 2 of ACRP Report 25 consists of a CD-ROM containing 11 spreadsheet models, which include practical learning exercises and several airport-specific sample data sets to assist users in determining appropriate model inputs for their situations, and a user's guide to assist the user in the correct use of each model. The models on the CD-ROM include such aspects of terminal planning as design hour determination, gate demand, check-in and passenger and baggage screening, which require complex analyses to support planning decisions. The CD-ROM is also available for download from TRB's website as an ISO image.

Business Intelligence, Analytics, and Data Science

This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

Introduction to Recreation Services for People With Disabilities continues to reflect a broad-based explanation of the role of practitioners in the interrelated fields of therapeutic recreation, inclusive recreation, and special recreation. This fourth edition represents a major revision, including the most current research and thinking about the interdisciplinary fields of recreation and disability studies. This book is intended to be an introductory text for all students in parks and recreation/leisure studies departments. Every student, whether she or he intends to work in a provincial park or a state hospital, a community recreation center or a community mental health center, a public school or a cruise ship, needs a basic level of knowledge about people with disabilities. The central theme of this book is that people with disabilities are people who have the same needs and wants as anyone else and deserve the right to be at the center of their services. Each person with a disability is a person first, not a disability. Recreation services must be centered around the person who is being served. That is, whether treatment-oriented recreation therapy, goal-oriented special recreation, or activity-oriented inclusive recreation, it is the person and not the professional or even the activity that must be at the center of service delivery. It is our hope that you will begin to see people with disabilities as people as you learn about recreation and therapeutic recreation services. If you emerge from this book (or your class) with

this person-centered knowledge, then you will have learned a lot about how to provide recreation services to people with disabilities. Whether or not you happen to be a person with a disability, our more earnest hope is that you will emerge with a commitment to ensure that people with disabilities are treated as people who are at the center of their programs and services. This means that you will become an advocate, maybe even a zealot, on behalf of people with disabilities. You will encourage friends and colleagues to use people-first and respectful language. You will refrain from jokes that perpetuate stereotypes. You will be part of a new breed of recreation and therapeutic recreation professionals who celebrate differences and strive to provide person-centered and responsive services.

Handbook of Research on Energy-Saving Technologies for Environmentally-Friendly Agricultural Development

Technology in today's world has continued to develop into multifaceted structures. The performance of computers, specifically, has significantly increased leading to various and complex problems regarding the dependability of these systems. Recently, solutions for these issues have been based on soft computing methods; however, there lacks a considerable amount of research on the applications of these techniques within system dependability. Soft Computing Methods for System Dependability is a collection of innovative research on the applications of these processing techniques for solving problems within the dependability of computer system performance. This book will feature comparative experiences shared by researchers regarding the development of these technological solutions. While highlighting topics including evolutionary computing, chaos theory, and artificial neural networks, this book is ideally designed for researchers, data scientists, computing engineers, industrialists, students, and academicians in the field of computer science.
