TRAIN TO WIN - Military Field Manual

"This report describes a U.S. Army Research Institute (ARI) Simulator Systems Research Unit study conducted in response to a request from the U.S. Army Training and Doctrine Command (TRADOC) Army Training Modernization Directorate (ATMD). The goal of the project was to assess the feasibility of supporting the training analysis and feedback process for the U.S. Army's maneuver combat training centers (MCTCs) and selected homestation locations from a single centralized location, referred to as a Training Analysis and Feedback Center of Excellence (TAAF-X). The study refined ATMD's TAAF-X concept, identified potential implementation problems, described strategies for overcoming implementation problems, developed a TAAF-X Task database to use as an evaluation tool in analyzing the most efficient combination of strategies to

overcome implementation problems, and estimated the overall feasibility of implementing the TAAF-X concept. Additionally we examined current programs under development and their potential impact on the TAAF-X concept."--DTIC.

This book describes in detail how the Army trains to win in diverse situations and on different terrains, to overcome strenuous environments and avert all types of attacks. With that focus, the Army develops training readiness and the capabilities that support Army and joint force of the commanders. The authors expended the fundamental concepts of the Army's training doctrine. This reading focuses on training leaders, Soldiers, and Army Civilians as effectively and efficiently as

possible given limitations in time and resources. It also aims to ensure that leaders incorporate ethical aspects (such as moral-ethical decision points and personal actions) into training scenarios or routinely discuss ethics during post-training after action reviews. FM 5-0 (C1), The Operations Process, constitutes the Army's view on planning, preparing, executing, and assessing operations. It describes how commanders-supported by their staffs, subordinate commanders, and other military and civilian partners-exercise mission command during the conduct of full spectrum operations. It describes how design assists commanders with understanding complex problems and developing an operational approach to solve or manage those problems throughout the conduct of operations. This manual applies to all Army forces. The principal audience for this manual is Army commanders and unit staffs (officers, noncommissioned officers, and Soldiers). Commanders and staffs of Army headquarters serving as a joint task force or a multinational headquarters

should also refer to applicable joint or multinational doctrine for the exercise of command and control. Trainers and educators throughout the Army also use this manual.

Will help develop an Army experienced enough to be comfortable with operating anywhere, in any type of operation, under any conditions. Its principles and concepts are intended to produce agile leaders, who can rapidly and easily adapt to changing, ambiguous situations. The manual's 4 chapters address the breadth and depth of Army training concepts. FM 7-0 sets out to change the Army mindset. The Army cannot return to its pre-9-11 focus of training for offensive and defensive operations in major combat operations. Army leaders must think differently about training and leader development in an Army that must be capable of conducting simultaneous offense, defense, and stability or civil support operations in any of the 5 operational themes. This text presents the papers given at an IMechE seminar held in April 1999 that reviewed both sides of the debate concerning the wheelset. The volume should be of interest to railway engineers, industry suppliers, and all those connected with the railways and civil engineering.

As humanitarian aid organizations have evolved, there is a growing recognition that incorporating palliative care into aid efforts is an essential part of providing the best care possible. A Field Manual for Palliative Care in Humanitarian Crises represents the first-ever effort at educating and providing guidance for clinicians not formally trained in palliative care in how to incorporate its principles into their work in crisis situations. Written by a team of international experts, this pocket-sized manual identifies the needs of people affected by natural hazards, political or ethnic conflict, epidemics of life-threatening infections, and other humanitarian crises. Later chapters explore topics including pain management, skin conditions, non-communicable diseases, palliative care emergencies, the law and ethics of end of life care, and more. Concise and highly accessible, this manual is an ideal educational tool pre-deployment or during fieldwork for clinicians involved in planning and providing humanitarian aid, local care providers, and medical trainees.

This handbook covers the general area of lubrication and tribology in all its facets: friction, wear lubricants (liquid, solid, and gas), greases, lubrication principles, applications to various mechanisms, design principles of devices incorporating lubrication, maintenance, lubrication scheduling, and standardized tests; as well as environmental problems and conservation. The information contained in these two volumes will aid in achieving effective lubrication for control of friction and wear, and is another step to improve understanding of the complex factors involved in tribology. Both metric and English units are provided throughout both volumes.

Battle Focused Training, FM 7-1, is the Army's doctrinal foundation for how to train, and it is applicable to all units and organizations of the Army. It explains how the Army assesses, plans, prepares, and executes training and leader development; it is critical to all the Army does. The goal of this manual is to create leaders who know how to think and apply enduring training principles to their units and organizations. FM 7-0 introduces the training cycle, the linkage of Army training and leader development, and the three domains where training occurs—the

operational, institutional, and self-development domains. FM 7-1 defines The Army Training System, outlines who is responsible for training and training support, and describes how to conduct training. This top-to-bottom understanding of training—ranging from policy and resources allocation at Headquarters, Department of the Army to unit and organization methods—is critical to executing training successfully and to linking the three domains where training occurs. The training doctrine in this manual will shape Army training regulations and support unit and organization training plans. The emphasis is on teaching leaders to think through the training process, as opposed to simply following a prescribed method. There is no training model or strategy that can achieve warfighting readiness in a unit without intensive leadership to build both competence and confidence. FM 7-1 builds on task, condition, and standards-based training. Knowing the task, assessing the level of proficiency against the standard, and developing a sustaining or improving training plan is the essence of all Army training and development. But warfighting readiness is about more than just technical competence. It is about developing confidence through trust—soldier-to-soldier, leader-to-led, and unit-to-unit—and the will to succeed. It is about leadership. Understanding how to conduct tough, realistic training at every echelon of the Army sets the foundation for successful multi echelon, joint, interagency, and coalition operations. Leaders train the unit and organizational capabilities required to fight and win across the full spectrum of operations. This manual provides leaders with the doctrinal guidelines for how to train, and is the basis for successful

training and operations. Soldiers have never let the nation fail—it is essential to train soldiers and units to uphold the Army's nonnegotiable contract with the American people—to fight and win the nation's wars, decisively.
