## **Soft Computing: Theories and Applications**

This book introduces particle physics, astrophysics and cosmology. Starting from an experimental perspective, it provides a unified view of these fields that reflects the very rapid advances being made. This new edition has a number of improvements and has been updated to describe the recent discovery of gravitational waves and astrophysical neutrinos, which started the new era of multimessenger astrophysics; it also includes new results on the Higgs particle. Astroparticle and particle physics share a common problem: we still don't have a description of the main ingredients of the Universe from the point of view of its energy budget. Addressing these fascinating issues, and offering a balanced introduction to particle and astroparticle physics that requires only a basic understanding of quantum and classical physics, this book is a valuable resource, particularly for advanced undergraduate students and for those embarking on graduate courses. It includes exercises that offer readers practical insights. It can be used equally well as a self-study book, a reference and a textbook.

## **Bibliomania, Or Book Madness**

Instant New York Times Bestseller Rob Bell, the beloved author of *Love Wins* and *What We Talk About When We Talk About God*, goes deep into the Bible to show how it is more revelatory, revolutionary, and relevant than we ever imagined—and offers a cogent

argument for why we need to look at it in a fresh, new way. In *Love Wins*, Rob Bell confronted the troubling questions that many people of faith were afraid to ask about heaven, hell, fate, and faith. Using the same inspired, inquisitive approach, he now turns to our most sacred book, the Bible. *What Is the Bible?* provides insights and answers that make clear why the Bible is so revered and what makes it truly inspiring and essential to our lives. Rob takes us deep into actual passages to reveal the humanity behind the Scriptures. You cannot get to the holy without going through the human, Rob tells us. When considering a passage, we shouldn't ask "Why did God say . . .?" To get to the heart of the Bible's meaning, we should be asking: "What's the story that's unfolding here and why did people find it important to tell it? What was it that moved them to record these words? What was happening in the world at that time? What does this passage/story/poem/verse/book tell us about how people understood who they were and who God was at that time?" In asking these questions, Rob goes beyond the one-dimensional question of "is it true?" to reveal the Bible's authentic transformative power. Rob addresses the concerns of all those who see the Bible as God's Word but are troubled by the ethical dilemmas, errors, and inconsistencies in Scripture. With *What Is the Bible?*, he recaptures the Good Book's magic and reaffirms its power and inspiration to shape and inspire our lives today.

This two-volume set of LNCS 11871 and 11872 constitutes the thoroughly refereed conference proceedings of the 20th International Conference on Intelligent Data Engineering and Automated Learning, IDEAL 2019, held in Manchester, UK, in November 2019. The 94 full papers presented were carefully reviewed and selected from 149 submissions. These papers provided a timely sample of the latest advances in data engineering and machine learning, from methodologies, frameworks, and algorithms to applications. The core themes of IDEAL 2019 include big data challenges, machine learning, data mining, information retrieval and management, bio-/neuro-informatics, bio-inspired models (including neural networks, evolutionary computation and swarm intelligence), agents and hybrid intelligent systems, real-world applications of intelligent techniques and AI.

### **Let Mt. Zion Rejoice!**

The impact of fat intake on hypercholesterolemia and related atherosclerotic cardiovascular diseases has been studied for decades. However, the current evidence base suggests that fatty acids also influences cardiometabolic diseases through other mechanisms including effects on glucose metabolism, body fat distribution, blood pressure, inflammation, and heart rate. Furthermore, studies evaluating single fatty acids have challenged the simplistic view of shared health effects within fatty acid groups categorized by degree of saturation. In addition, investigations of endogenous fatty acid metabolism,

including genetic studies of fatty acid metabolizing enzymes, and the identification of novel metabolically derived fatty acids have further increased the complexity of fatty acids' health impacts. This Special Issue aims to include original research and up-to-date reviews on genetic and dietary modulation of fatty acids, and the role and function of dietary and metabolically derived fatty acids in cardiometabolic health.

### **The West in Early Cinema**

Verhoeff investigates the emergence of the western genre, made in the first two decades of cinema (1895-1915). By analyzing many unknown and forgotten films from international archives she traces the relationships between films about the American West, their surrounding films, and other popular media such as photography, painting, (pulp) literature, Wild West Shows and popular ethnography. Through this exploration of archival material she raises new questions of historiography and provides a model for historical analysis. These first traces of the Western film reveal a preoccupation with presence and actuality that informs us about the way in which film, as new medium, took shape within the context of its contemporary visual culture. In *The West in Early Cinema* gaat Nanna Verhoeff op zoek naar de nog onbekende beginjaren van het westerngenre tijdens de eerste twee decennia van het medium film (1895-1915). Aan de hand van onbekende en vergeten films uit internationale filmarchieven traceert zij de relaties tussen films over het Westen, omringende

filmgenres uit deze periode, en andere populaire media als fotografie, schilderkunst, (pulp)literatuur, Wild West Shows en populaire etnografie. Deze sporen van het genre tonen een grote actualiteit en variatie, die laat zien op welke manier de film als nieuw medium een vorm vond binnen de toenmalige visuele cultuur.

### **Religious Folk Songs of the Negro**

This volume provides an accessible scientific introduction to the historical geography of Tropical Pacific Islands, assessing the environmental and cultural changes they have undergone and how they are affected currently by these shifts and alterations. The book emphasizes the roles of plants, animals, people, and the environment in shaping the tropical Pacific through a cross-disciplinary approach involving history, geography, biology, environmental science, and anthropology. With these diverse scientific perspectives, the eight chapters of the book provide a comprehensive overview of Tropical Pacific Islands from their initial colonization by native peoples to their occupation by colonial powers, and the contemporary changes that have affected the natural history and social fabric of these islands. The Tropical Pacific Islands are introduced by a description of their geological formation, development, and geography. From there, the book details the origins of the island's original peoples and the dawn of the political economy of these islands, including the domestication and trade of plants, animals, and other natural resources. Next, readers will learn about the impact of

missionaries on Pacific Islands, and the affects of Wold War II and nuclear testing on natural resources and the health of its people. The final chapter discusses the islands in the context of natural resource extraction, population increases, and global climate change. Working together these factors are shown to affect rainfall and limited water resources, as well as the ability to sustain traditional crops, and the capacity of the islands to accomodate its residents.

<https://rowman.com/ISBN/9780759112421> Research Methods in Anthropology is the standard textbook for methods classes in anthropology programs. Over the past dozen years, it has launched tens of thousands of students into the field with its combination of rigorous methodology, wry humor, commonsense advice, and numerous examples from actual field projects. Now the fourth edition of this classic textbook is ready, written in Russ Bernard's unmistakable conversational style. It contains all the useful methodological advice of previous editions and more: additional material on text analysis, an expanded section on sampling in field settings, the use of computers for fieldwork and analysis, the pros and cons of rapid assessment techniques in anthropology, dozens of new examples, and an expanded bibliography. 'Methods belong to all of us' is the watchphrase of this book. Whether you are

The book focuses on soft computing and its applications to solve real-world problems in different domains, ranging from medicine and health care, to supply chain management, image processing and cryptanalysis. It includes high-quality papers presented at the International Conference on Soft Computing: Theories and Applications (SoCTA 2018), organized by Dr. B. R. Ambedkar National Institute of Technology, Jalandhar, Punjab, India. Offering significant insights into soft computing for teachers and researchers alike, the book inspires more researchers to work in the field of soft computing.

This edition presents Jonathan Swift's most important Irish writings in both prose and verse, together with an introduction, head notes and annotations that shed new light on the full context and significance of each piece. Familiar works such as "Gulliver's Travels" and "A Tale of a Tub" acquire new and deeper meanings when considered within the Irish frameworks presented in the edition. Differing in noteworthy ways from the more traditional, canonical, Anglocentric picture conveyed by other published volumes, the Swift that emerges from these pages is a brilliant polemicist, popular satirist, political agitator, playful versifier, tormented Jeremiah, and Irish patriot.

### **Research Methods in Anthropology**

In the tradition of Eric Lott's award-winning *Love and Theft*, Hartman's new book shows how the violence of captivity and enslavement was embodied in many of the performance practices that grew from, and about, slave culture in antebellum America. Using tools from anthropology and history as well as literary criticism, she examines a wealth of material, including songs, dance, stories, diaries, narratives, and journals to provide new insights into a range of issues. She looks particularly at the presentations of slavery and blackness in minstrelsy, melodrama, and the sentimental novel; the disparity between actual slave culture and "managed" plantation amusements; the construction of slave culture in nineteenth-century ethnographic writing; the rhetorical performance of slave law and slave narratives; the dimension of slave performance practice; and the political consciousness

offolklore. Particularly provocative is her analysis of the slave pen and auction block, which transmogrified terror into theatre, and her reading of the rhetoric of seduction in slavery law and legal cases concerning rape. Persuasively showing that the exercise of power is inseparable from its display, *Scenes of Subjection* will interest readers involved in a wide range of historical, literary, and cultural studies.

How God is described today strikes many as mean, primitive, backward, illogical, tribal, and at odds with the frontiers of science. At the same time, many intuitively feel a sense of reverence and awe in the world. Can we find a new way to talk about God? Pastor and New York Times bestselling author Rob Bell does here for God what he did for heaven and hell in *Love Wins*: he shows how traditional ideas have grown stale and dysfunctional and reveals a new path for how to return vitality and vibrancy to how we understand God. Bell reveals how we got stuck, why culture resists certain ways of talking about God, and how we can reconnect with the God who is with us, for us, and ahead of us, pulling us forward into a better future—and ready to help us live life to the fullest.

## **Intelligent Data Engineering and Automated Learning - IDEAL 2019**

What was a book in early modern England? By combining book history, bibliography and literary criticism, *Material Texts in Early Modern England* explores how sixteenth- and seventeenth-century books were stranger, richer things than scholars have imagined. Adam Smyth examines important aspects of bibliographical culture which have been under-examined by critics: the cutting up of books as a form of careful reading; book destruction and its relation to canon formation; the prevalence of printed errors and the literary richness of mistakes; and the recycling of older texts in the bodies of new books, as printed waste. How did authors, including Herbert, Jonson, Milton, Nashe and Cavendish, respond to this sense of the book as patched, transient, flawed, and palimpsestic? *Material Texts in Early Modern England* recovers these traits and practices, and so crucially revises our sense of what a book was, and what a book might be.

Slow sand filtration is typically cited as being the first "engineered" process in drinking-water treatment. Proven modifications to the conventional slow sand filtration process, the awareness of induced biological activity in riverbank filtration systems, and the growth of oxidant-induced biological removals in more rapid-rate filters (e.g. biological activated carbon) demonstrate the renaissance of biofiltration as a treatment process that remains viable for both small, rural communities and major cities. Biofiltration is expected to become even more common in the future as efforts intensify to decrease the presence of disease-causing microorganisms and disinfection by-products in drinking water, to minimize microbial regrowth potential in distribution systems, and where operator skill levels are emphasized. Recent Progress in Slow Sand and Alternative Biofiltration Processes provides a state-of-the-art assessment on a variety of biofiltration systems from studies conducted around the world. The authors collectively represent a perspective from 23 countries and include academics, biofiltration system users, designers, and manufacturers. It provides an up-to-date perspective on the physical, chemical, biological, and operational factors affecting the performance of slow sand filtration (SSF), riverbank filtration (RBF), soil-aquifer treatment (SAT), and biological activated carbon (BAC) processes. The main themes are: comparable

This volume discusses the interactions between viruses and their host cells, and explores the roles of host and viral genes and non-coding RNAs in the virus replication cycle. During infection, viruses express a variety of genes, encoding proteins and RNAs that serve to subjugate the cell – by redirecting cellular processes to support viral replication and, at the same time, by mitigating the cellular response to infection. In this book, experts discuss these

interactions in depth, and elaborate on our current understanding of virus-cell interactions for a diverse range of viruses, including positive and negative sense RNA viruses, DNA viruses, and a vector-borne virus. The roles of non-coding RNAs are also discussed. While each class of viruses has distinct replication requirements, this volume reveals unique features and commonalities in viral replication cycles. Accordingly, it represents a valuable source of information for researchers and clinicians alike.

Renowned choral conductor and educator Andr J. Thomas has crafted a book that the conductor of any choral ensemble-be it church, high school, university, or professional-will want close at hand when preparing to program any concert spiritual. Understanding the Spiritual, the first of the book's two sections, includes an exploration of the beginnings of the spiritual, its role in society and its transition into art music. Issues of interpretation-text, diction, rhythm and tempo-are addressed in the second section, Performing the Spiritual. In addition to interviews with noted conductors Dr. Anton Armstrong and Prof. Judith Willoughby as to matters of performance and selection, the centerpiece of this section is Dr. Thomas's personal reflections on several spiritual arrangements, including his rehearsal techniques (with specific examples and measure-

This book is a critical biography of Grant Allen, (1848-1899), the first for a century, based on all the surviving primary sources. Born in Kingston, Ontario, into a cultured and affluent family, Allen was educated in France and England. A mysterious marriage while he was an Oxford undergraduate wrecked his academic career and radicalized his views on sexual and marital questions, as did a three-year teaching stint in Jamaica. Despite his lifelong ill health and short life, Allen was a writer of extraordinary productivity and range. About half - more than 30 books and many hundreds of articles - reflects interests which ran from Darwinian biology to cultural travel guides. His prosperity, however, was underpinned by fiction; more than 30 novels, including *The Woman Who Did*, which has attracted much recent attention from feminist critics and

This book represents the first multidisciplinary scientific work on a deep volcanic maar lake in comparison with other similar temperate lakes. The syntheses of the main characteristics of Lake Pavin are, for the first time, set in a firmer footing comparative approach, encompassing regional, national, European and international aquatic science contexts. It is a unique lake because of its permanently anoxic monimolimnion, and furthermore, because of its small surface area, its substantially low human influence, and by the fact that it does not have a river inflow. The book reflects the scientific research done on the general limnology, history, origin, volcanology and geological environment as well as on the geochemistry and biogeochemical cycles. Other chapters focus on the biology and microbial ecology whereas the sedimentology and

Insightful, thought-provoking, challenging, and hopeful—this volume will be a source of knowledge, a stimulus for discussion, and a call to reconsider the many and varied viewpoints of the African American church.

### **Ocean of Sound**

The aim of this edited volume is to introduce the scientific community to paleoenvironmental studies of estuaries, to highlight the types of information that can be obtained from such studies, and to promote the use of paleoenvironmental studies in estuarine management. Readers will learn about the the application of different paleoecological approaches used in estuaries that develop our understanding of their response to natural and human influences. Particular attention is given to the essential steps required for undertaking a paleoecological study, in particular with regard to site selection, core extraction and chronological techniques, followed by the range of indicators that can be used. A series of case studies are discussed in the book to demonstrate how paleoecological studies can be used to address key questions, and to sustainably manage these important coastal environments in the future. This book will appeal to professional scientists interested in estuarine studies and/or paleoenvironmental
