Human Resources in Healthcare

In *Health Care Policy and Practice: A Biopsychosocial Perspective*, Moniz and Gorin have updated their text to incorporate health care reform. The authors have also restructured the book to guide students through the development of the American health care system: what it is, what the policies are, and how students can influence them. The first section focuses on recent history and reforms during the Obama Administration to describe the health care system; section two examines the system's structure and policies; and the third section explores policy analysis and advocacy, and disparities in health based on demographics and inequities in access to care. It concludes with a discussion of the impact of social factors on health and health status. The new edition incorporates the CSWE EPAS competencies; it is for social work courses in health care, health care policy, and health and mental health care policy.

Health care systems worldwide are faced with the challenge of improving the quality of care. Providing evidence from health research is necessary but not sufficient for the provision of optimal care and so knowledge translation (KT), the scientific study of methods for closing the knowledge-to-action gap and of the barriers and facilitators inherent in the process, is gaining significance. Knowledge Translation in Health Care explains how to use research findings to improve health care in real life, everyday situations. The authors define and describe knowledge translation, and outline strategies for successful knowledge translation in practice and policy making. The book is full of examples of how knowledge translation models work in closing the gap between evidence and action. Written by a team of authors closely involved in the development of knowledge

Student Spreadsheets ([click here for access](#)) With this casebook, students have the opportunity to apply finance principles and concepts to settings that simulate actual work environments. In that way, the book allows instructors to create a bridge between academic learning and applied practice. Each of the 32 finance cases presents a scenario and relevant background on a healthcare organization and poses a financial management issue that students must analyze in order to recommend appropriate courses of action. The majority of cases are accompanied by spreadsheet models to help students perform the required analyses. The casebook also contains seven qualitative mini-cases created to highlight the ethical dilemmas that occasionally arise in the practice of healthcare finance. Important changes to this edition: All cases have been updated, and many have been revised extensively, including new exhibits, timely topics, and new calculations Two new cases have been added to the book: One focuses on bond refunding and the other covers revenue cycle management A new mini-case focuses on the potential ethical conflicts involved with physician-owned distributors (PODs) The PowerPoint slides have been changed to allow instructors to first present a short introduction to the case and then, after students have completed their analyses, review each case by discussing three key learning points
