No writer has had a greater influence on the American West than Edward Abbey (1927-89), author of twenty-one books of fiction and nonfiction. This long-awaited biographical memoir by one of Abbey's closest friends is a tribute to the gadfly anarchist who popularized environmental activism in his novel *The Monkey Wrench Gang* and articulated the spirit of the arid West in *Desert Solitaire* and scores of other essays and articles. In the course of a twenty-year friendship Ed Abbey and Jack Loeffler shared hundreds of campfires, hiked thousands of miles, and talked endlessly about the meaning of life. To read Loeffler's account of his best pal's life and work is to join in their friendship. Born and raised in Pennsylvania, Abbey came west to attend the University of New Mexico on the G.I. Bill. His natural inclination toward anarchism led him to study philosophy, but after earning an M.A. he rejected academic life and worked off and on for years as a backcountry ranger and fire lookout around the Southwest. His 1956 novel *The Brave Cowboy* launched his literary career, and by the 1970s he was recognized as an important, uniquely American voice. Abbey used his talents to protest against the mining and development of the American West. By the time of his death he had become an idol to environmentalists, writers, and free spirits all over the West. "Ed Abbey and Jack Loeffler were like Don Quixote and Sancho Panza. Loeffler delivers his friend, warts and all on a platter full of reverence and irreverence and carefully researched factual information, interspersed with hearty laughter and much serious consideration of all life's Great Questions. Jack's story elucidates and demythifies the Abbey legend, giving us powerful flesh and blood instead."--John Nichols

This textbook guides the reader towards various aspects of growth and international trade in a Diamond-type overlapping generations framework. Using the same model type throughout the book, timely topics such as growth with bubbles, debt reduction in rich countries and policies to mitigate climate change are explored. The first part starts from the “old” growth theory and bridges to the “new” growth theory (including R&D and human capital approaches). The second part presents an intertemporal equilibrium theory of inter and intra-sectoral trade and concludes by analyzing the debt mechanics inducing the huge imbalances among eurozone countries. The book is primarily addressed to graduate students wishing to proceed to the analytically more demanding journal literature.

In *Elite Transition*, Patrick Bond examines the economic and social compromises that have been, and are being, made between the past and present powers in South Africa. A former adviser to the ANC, Bond investigates how groups such as the ANC went from being a force of liberation for all people to a vehicle now perceived as serving the economic interests of an elite few. Bond covers a range of socioeconomic factors under both the old and new South Africa, highlighting the reasons for the transition's 'development' failure and drawing on case studies on key issues: social contracts, black economic empowerment, housing and corporate power. He explores the idea that progressive policymaking is being compromised by the new petit bourgeoisie and ruling elite, and assesses the view that, as change slows down, official policy is increasingly one of lower expectations.

J. D. Bernal's monumental work, *Science in History*, was the first full attempt to analyse the reciprocal relations of science and society throughout history, from the perfection of the flint hand-axe to the hydrogen bomb. In this remarkable study he illustrates the impetus given to (and the limitations placed upon) discovery and invention by pastoral, agricultural, feudal, capitalist, and socialist systems, and conversely the ways in which science has altered economic, social, and political beliefs and practices. In this first volume Bernal discusses the nature and method of science before describing its emergence in the Stone Age, its full formation by the Greeks and its continuing growth (probably influenced from China) under Christendom and Islam in the Middle Ages. Andrew Brown, Bernal's biographer, with a nice sense of paradox, has said of him, he 'was steeped in history, in part

because he was always thinking about the future.' He goes on to say, 'Science in History is an encyclopaedic, yet individual and colourful account of the emergence of science from pre-historic times. There is detailed coverage of the scientific revolution of the Enlightenment, the Industrial Age and the first two-thirds of the twentieth century. . . The writing flows and is devoid of the tortured idioms that mar so many academic histories of science. After reading it, it is easy to agree with C. P. Snow's orotund observation that Bernal was the last man to know science. Faber Finds are reissuing the illustrated four volume edition first published by Penguin in 1969. The four volumes are: Volume 1: The Emergence of Science, Volume 2: The Scientific and Industrial Revolutions, Volume 3: The Natural Sciences in Our Time, Volume 4: The Social Sciences: Conclusion. 'This stupendous work . . . is a magnificent synoptic view of the rise of science and its impact on society which leaves the reader awe-struck by Professor Bernal's encyclopaedic knowledge and historical sweep.'
