This book constitutes the thoroughly refereed post-conference proceedings of the 13th International Conference on Wired/Wireless Internet Communications, WWIC 2015, held in Malaga, Spain, in May 2015. The 31 papers presented in this volume were carefully reviewed and selected from 43 submissions. They focus on the efficient integration of new network approaches with the traditional wired infrastructure. The topics addressed are: design and evaluation of protocols, dynamics of the integration, performance tradeoffs, and the need for new performance metrics and cross-layer interactions.

This book contains the refereed proceedings of the First Scandinavian Conference on Information Systems (SCIS), held in Rebild, Denmark, in August 2010. The conference was held in conjunction with the traditional IRIS seminar for information systems research in Scandinavia, and its objective was to extend and formalize part of the seminar to a full conference by presenting high-quality research with a particular view on the Scandinavian research community. At the same time, SCIS aims to continue with the Scandinavian information systems research tradition, which has for several decades placed emphasis on the relevance of practical results for users, industry and society at large. The 10 papers accepted for SCIS were presented in one single track and cover topics like requirements engineering, organizational integration, IT governance, adaption of standard software, and outsourcing. Each submitted paper was reviewed by three program committee members from Scandinavia, USA, and Australia; and this thorough selection process resulted in an

acceptance rate of 25%.

This book contains a detailed study of the applicable international law relevant to peace operations in the context of collapsed states, the establishment of safe havens or in an enforcement role in general. It discusses the interaction and legal relationship of non government organisations, the military, UN agencies and the warring parties under international law and in practice. The book also deals with issues concerning implication of contemporary peace operations for military forces in terms of force structure, operating procedures and training. The book focuses on the critical issues of the interim administration of law and order in complex operations, and the reconstruction of a local capability in this regrad. Many contemporary operational challenges are analysed: Bosnia, the Middle East and, in particular, a detailed study of Somalia based on the author's inside knowledge, experience and access to information acquired on the ground in Somalia.

There is an urgent need to develop and improve low cost technologies for wastewater treatment. Simultaneously treating wastewater and producing duckweed in a pond system is, therefore, an

attractive solution contributing to both environmental protection and food production. Duckweed has excellent qualities: a high protein content, a high growth rate and is an easy crop to handle. The small plant turns nitrogen from wastewater into a food source. This thesis reports on the effect of different operational variables, like anaerobic pre-treatment, the combination of algae and duckweed ponds and pond depth. Improved nitrogen removal was obtained through the combination of duckweed ponds with algae ponds. Duckweed pond systems could be designed with shallow depth without affecting nitrogen removal efficiency. This research is the result of the cooperative effort between the EIDENAR, Univalle, Cali, Colombia and the UNESCO-IHE Institute for Water Education in Delft, the Netherlands.

A big cat overthrows the Indian state and establishes a reign of terror over the residents of a Himalayan town. A developmental legislation aimed at providing employment and commanding a huge budget becomes 'unimplementable' in a region bedeviled by high levels of poverty and unemployment. Paper Tiger provides a lively ethnographic account of how such seemingly bizarre scenarios come to be in present-day India. This book presents a unique explanation for why and how progressive laws in India can do what

they do and not, ever so often, what they are supposed to do. On the basis of detailing the everyday bureaucratic life on India's Himalayan borderland, it proposes an ethnographically derived concept - paper tiger - as a modality for the study of the state. This accessible monograph shifts the very frames of thought through which we will henceforth understand the implementation of law and the workings of the developmental Indian state.

Considering the key evolutions within the access network technologies as well as the unprecedented levels of bandwidth demands by end users, this book condenses the relentless research, design, and deployment experience of state-of-the-art access networks. Furthermore, it shares the critical steps and details of the developments and deployment of these emergent technologies; which is very crucial particularly as telecommunications vendors and carriers are looking for cost-effective ultra-broadband "last-mile" access solutions to stay competitive in the "post bubble" era. The book is written to provide a comprehensive overview of the major broadband access technologies and deployments involving internationally recognized authors and key players. Due to its scope and depth, the proposed book is able to fill an important gap of today's available literature.

The role of government, institutions and society has been radically transformed in the last two decades. This book examines how the New Development Paradigm is put into practice in Pakistan and other underdeveloped countries. It focuses upon the role NGOs, institutions and local goverments play in development related activity, and examines the attempts to alter the gender balance, considered to be one of the main reasons for lack of development. Essentially, the book offers a critique of the new theories which constitute the New Development Paradigm and addresses a wide audience ranging from the scholar and activist to journalists and general readers.

Since its formal inception in 1996, FECOFUN has grown into a social movement organization, representing approximately 3.5 million forest users in Nepal. It has been instrumental in advocating for forest user rights and lobbying government officials and politicians. Recent contentious actions include marches, demonstrations, signature campaigns, court cases, and petitions. Through these kinds of engagements FECOFUN is beginning to shape a new space within civil society where questions of property rights and control over resources can be more effectively debated and negotiated by forest users as Nepalese constituents and citizens.

Based on detailed multi-disciplinary analyses of more than 800 recorded handover interactions, audits of written handover documentation, interviews and survey responses, the contributing authors identify features of effective and ineffective clinical handovers in diverse hospital contexts. The authors then translate their descriptive findings into practical protocols, communication strategies and checklists that clinicians, managers and policy makers can apply to improve the safety and quality of clinical handovers. All the contributors are affiliated with the International Research Centre for Communication in Healthcare (IRCCH), an international multidisciplinary organisation of over 90 healthcare professionals from more than 17 countries committed to improving improving communication in healthcare systems around the world. 'The authors have created a new and tightly woven systems safety net that will, if implemented, significantly reduce the occurrence of errors resulting from cumulative communication failures.' -H.
