Ethical Values and the Integrity of the Climate Change Regime

Adaptation to Climate Change in Southern Africa

The re-emergence of China as an economic superpower during its systemic transition is an astonishing phenomenon. China and Post-Socialist Development is the first comprehensive attempt to frame China's advancements within the context of the East Asian developmental miracle, against the background of post-socialist transformation, asking how has it happened and where does China go from here? In this book the author argues that as China transits from central planning to market, it tries to imitate the institutions and policies of Japan and South Korea during their high growth periods of the second half of the twentieth century. China's approach - broadly in opposition to the neo-liberal doctrine - has brought impressive results, leading the author to make important predictions about the future. This book is for everybody who is interested in China, development and post-socialist transformation.

An Introduction to Changing India

The book examines the issues of sustainability in general. It addresses various socioeconomic determinants of ecological footprints in different world's nations, regions, and cultures. Major socioeconomic determinants of ecological footprints are fleshed out using Comparative Model Analysis and rigorous Multiple Regression Analysis. The study exposes the inequitable distribution of the world's ecological footprints and also heightens the concern about ecological imbalances and overshoots. It explains how sustainable development can be promoted and achieved in regional, national, and local jurisdictions. The study provides information that will likely help various governments and policy-makers determine if a given nation, region, or culture is on a sustainable path. It helps government leaders, planners, policy-makers, and even students of sustainability make a difference in mitigating the effects of various environmental stressors. If this book makes people and policy-makers in different countries, regions, and cultures think globally but act locally, then the objectives are well-served.

Justice, Sustainability, and Security

This book explores issues related to poverty in South Asia in a two-pronged manner-by focusing on injustice created and perpetuated by the unjust nature of a social order as its source and then providing concrete suggestions about how policymakers may move to challenge these injustices. Drawing research inputs

from studies across various South Asian countries, the book redefines poverty as a process where certain sections of the society are excluded from equal participation in development opportunities as well as decision-making. It further identifies a variety of operational ideas for policymakers, political activists and civil society advocacy groups committed to build a more just and poverty free society in South Asia

The Political Economy of Caribbean Development

Justice, Sustainability, and Security not only enhances our knowledge of these issues, but it teases out our moral dimensions and offer prescriptions for how governments and global actors might craft their policies to better consider their effects on the global human condition.

The Developing Person Through Childhood and Adolescence

Illustrates the indicators affecting international politics, economics, and society using maps and graphics.

Wealth and Welfare States

Adverse climate impacts are already evident across Southern Africa and pose a serious threat to the development prospects of the region's societies. Sustainable development in this region will depend on the rapid development and implementation of

effective adaptation measures. This volume identifies the new socioeconomic and political boundaries to development that result from ongoing climate change in Southern Africa. The collected papers explore the region's potential for a transition to development strategies that combine meaningful socioeconomic investment and adaptation measures while also improving livelihoods in the region. The chapters are backed up by detailed case studies which underscore the urgent need for national governments and multilateral agencies to develop strategies to support Southern Africa's societies in adapting to climate change.

An Introduction to the Human Development and Capability Approach

Global Environmental Issues, second edition builds on the popularity of the first edition, viewing global environmental problems as complex issues with a network of causes, influenced by a range of actors with differing priorities. The book recognises that science underpins much of what happens in society and therefore it is important to be able to interpret the environmental and social consequences of scientific developments. In addition to discussing the main biophysical causes, the book illustrates how socio-economic and political factors determine why and how people use land, resources and technology, and how this in turn affects natural resource management. This edition includes new chapters on the politics of science, International environmental regulation and treaties, environmental issues in a

globalised world and natural resource management. Global Environmental Issues, second edition is essential reading for upper level undergraduates and Masters students within departments of Environmental Science and Geography. Includes case studies from around the world to provide a real life context for the issues tackled in each chapter Considers both the results of human actions and natural environmental change in order to provide balanced, in-depth debate Includes coverage of contemporary 'hot topics' such as biodiversity, globalization and sustainable development Chapters authored by experts in the field Includes new chapters on The politics of science, International environmental regulation and treaties , Environmental issues in a globalised world and Natural Resource Management Expanded sections include negotiating multilateral environmental agreements, GM crops, biofuels and marine and freshwater resources

Challenging the Injustice of Poverty

This report on Argentina's Assessment of Development Results (ADR) focuses on the following three thematic areas: fostering democratic governance; achieving the Millennium Development Goals (MDGs) and reducing poverty under a human development perspective; and ensuring environmental sustainability. Reflecting on the characteristics of Argentina's economic history, its current juncture and prospects, the ADR examined the past with a forward-looking perspective.

Assessment of Development Results - Argentina

Climate change is now recognised as one of the greatest challenges facing the international community and when coupled with energy production and use - the most significant contributor to climate change - and the related security problems the double threat to international security and human development is of the highest order. This wide-ranging book brings together leading thinkers from academia, government and civil society to examine and address the global insecurity and development challenges arising from the twin thrust of climate change and the energy supply crunch. Part one considers energy. It analyses the challenges of meeting future energy demands and the ongoing and future security-related conflicts over energy. Coverage includes security and development concerns related to the oil and gas, nuclear, bio-fuels and hydropower sectors, ensuring energy access for all and addressing sustainable consumption and production in both developed and rapidly industrializing countries such as India, China, Brazil and South Africa. Part two analyses how climate change contributes to global insecurity and presents a consolidated overview of the potential threats and challenges it poses to international peace and development. Coverage includes future water scenarios including a focus on scarcity in the Middle East, food security, biodiversity loss, land degradation, the changing economics of climate change, adaptation and the special case of small

island states. The final part lays out the potential avenues and mechanisms available to the international community to address and avert climate and energy instability via the multilateral framework under the United Nations. It also addresses mechanisms for resource and knowledge transfer from industrialized to developing countries to ensure a low-carbon energy transition by focusing on the rapid deployment of clean energy technologies and ways to tackle income and employment insecurity created by the transition away from traditional energy sources. This book offers the most comprehensive international assessment of the challenges and solutions for tackling the global insecurity arising from climate change and energy provision and use. It is essential reading for students, researchers and professionals across international relations, security, climate change and the energy sectors.

The Crisis in Honduras

This book is a multidisciplinary approach to Africa's international relations in an era of globalization and the shifting of power from the West. It moves beyond colonization, marginalization, imperialism to look at the forces and dynamics that are reshaping Africa's external relations today.

Global Environmental Issues

Food Movements Unite! Strategies to transform our food systems The present corporate food regime dominating the planet's food systems is

environmentally destructive, financially volatile and socially unjust. Though the regime's contributions to the planet's four-fold food-fuel-finance and climate crises are well documented, the "solutions" advanced by our national and global institutions reinforce the same destructive technological path, the same global market fundamentalism, and the same unregulated consolidation of corporate power in the food system that brought us the crisis in the first place. A dynamic global food movement has risen up in the face of this sustained corporate assault on our food systems. Around the world, local food justice activists have taken back pieces of the food system through local gardening, organic farming, community-supported agriculture, farmers markets, and locally-owned processing and retail operations. Food sovereignty advocates have organized locally and internationally for land reform, the end of destructive free trade agreements, and support for family farmers, women and peasants. Protests against—and viable alternatives to—the expansion of GMOs, agrofuels, land grabs and the oligopolistic control of our food, are growing everywhere every day, giving the impression that food movements are literally "breaking through the asphalt" of a reified corporate food regime. The social and political convergence of the "practitioners" and "advocates" in these food movements is also well underway, as evidenced by the growing trend in local-regional food policy councils in the US, coalitions for food sovereignty spreading across Latin America, Africa, Asia and Europe, and the increasing attention to practical-political solutions to the food crisis appearing in academic literature and the popular media. The global

food movement springs from strong commitments to food justice, food democracy and food sovereignty on the part of thousands of farmers unions, consumer groups, faith-based, civil society and community organizations across the urban-rural and north-south divides of our food systems. This magnificent “movement of movements” is widespread, highly diverse, refreshingly creative—and politically amorphous. Food Movements Unite! is a collection of essays by food movement leaders from around the world that all seek to answer the perennial political question: What is to be done? The answers—from the multiple perspectives of community food security activists, peasants and family farm leaders, labor activists, and leading food systems analysts—will lay out convergent strategies for the fair, sustainable, and democratic transformation of our food systems. Authors will address the corporate food regime head on, arguing persuasively not only for specific changes to the way our food is produced, processed, distributed and consumed, but specifying how these changes may come about, politically.

Environmental Change, Adaptation and Migration

The Arab Human Development Report aims at building human development in the Arab world. Gender inequality is generally recognized as one of the main obstacles to development in the Arab Region. This volume of the report focuses on the history and contemporary dynamics of Arab women's economic, political, and social empowerment. It

details the processes in which gender impacts on Arab development while suggesting means of overcoming some of the challenges and building more equitable societies.

Peaceful Islamist Mobilization in the Muslim World

This book investigates the ethical values that inform the global carbon integrity system, and reflects on alternative norms that could or should do so. The global carbon integrity system comprises the emerging international architecture being built to respond to the climate change. This architecture can be understood as an 'integrity system'- an inter-related set of institutions, governance arrangements, regulations and practices that work to ensure the system performs its role faithfully and effectively. This volume investigates the ways ethical values impact on where and how the integrity system works, where it fails, and how it can be improved. With a wide array of perspectives across many disciplines, including ethicists, philosophers, lawyers, governance experts and political theorists, the chapters seek to explore the positive values driving the global climate change processes, to offer an understanding of the motivations justifying the creation of the regime and the way that social norms impact upon the operation of the integrity system. The collection focuses on the nexus between ideal ethics and real-world implementation through institutions and laws. The book will be of interest to policy makers, climate change experts, carbon taxation regulators,

academics, legal practitioners and researchers.

The World Trade Organization (WTO) is often accused of, at best, not paying enough attention to human rights or, at worst, facilitating and perpetuating human rights abuses. This book weighs these criticisms and examines their validity, incorporating legal arguments as well as some economic and political science perspectives. After introducing the respective WTO and human rights regimes, and discussing their legal and normative relationship to each other, the book presents a detailed analysis of the main human rights concerns relating to the WTO. These include the alleged

democratic deficit within the Organization and the impact of WTO rules on the right to health, labour rights, the right to food, and on questions of poverty and development. Given that some of the most important issues within the WTO concern its impact on poor people within developing States, the book asks whether rich States have an obligation to the people of poorer States to construct a fairer trading system that better facilitates the alleviation of poverty and development. Against this background, the book examines the current Doha round proposals as well as suggestions for reform of the WTO to make it more 'human rights-friendly'.

The Routledge International Handbook of Globalization Studies

In *Peaceful Islamist Mobilization in the Muslim World: What Went Right*, Julie Chernov Hwang presents a compelling and innovative new theory and framework for examining the variation in Islamist mobilization strategies in Muslim Asia and the Middle East.

Violent Societies

This updated Fifth Edition of Scott Sernau's acclaimed text provides a sociological framework for analyzing inequality within the United States in the context of global stratification and a rapidly changing world economy. With insightful analysis, the text provides an accessible introduction to stratification systems and the structural and personal realities of growing class divides. Using examples drawn straight from

today's headlines, Sernau explores each dimension of inequality as he analyzes the relationship between changing global power and growing inequalities within countries. Throughout, a focus on social action and community engagement encourages students to become involved, active learners in the classroom and engaged citizens in their communities.

The Penguin State of the World Atlas

The world is on the brink of the greatest crisis it has ever faced: a spiraling lack of fresh water.

Groundwater is drying up, even as water demands for food production, for energy, and for manufacturing are surging. Water is already emerging as a headline geopolitical issue—and worsening water security will soon have dire consequences in many parts of the global economic system. Directed by UN Secretary General Ban Ki-Moon at the 2008 Davos Annual Meeting, the World Economic Forum assembled the world's foremost group of public, private, non-governmental-organization and academic experts to examine the water crisis issue from all perspectives. The result of their work is this forecast—a stark, non-technical overview of where we will be by 2025 if we take a business-as-usual approach to (mis)managing our water resources. The findings are shocking. Perhaps equally stunning are the potential solutions and the recommendations that the group presents. All are included in this landmark publication. *Water Security* contains compelling commentary from leading decision-makers, past and present. The commentary is supported by analysis from leading

academics of how the world economy will be affected if world leaders cannot agree on solutions. The book suggests how business and politics need to manage the energy-food-water-climate axis as leaders negotiate the details of the climate regime that replace Kyoto Protocols.

The State of the World Atlas

The Routledge International Handbook of Globalization Studies offers students clear and informed chapters on the history of globalization and key theories that have considered the causes and consequences of the globalization process. There are substantive sections looking at demographic, economic, technological, social and cultural changes in globalization. The handbook examines many negative aspects – new wars, slavery, illegal migration, pollution and inequality – but concludes with an examination of responses to these problems through human rights organizations, international labour law and the growth of cosmopolitanism. There is a strong emphasis on interdisciplinary approaches with essays covering sociology, demography, economics, politics, anthropology and history. The Handbook written in a clear and direct style will appeal to a wide audience. The extensive references and sources will direct students to areas of further study.

Blame it on the WTO?

In a world where armed conflict, repression, and

authoritarian rule are too frequent, human rights and peace-building present key concepts and agendas for the global and local struggle for peace and development. But are these agendas congruent? Do they support each other? Many organizations, states, and individuals have experienced how priorities of one agenda create friction with the other. For instance, are justice and reconciliation incompatible goals? If not, do they lead to counteracting initiatives? How can local and international actors develop support to societies that search a way out of violence and repression without violating universal moral standards, in an imperfect and resource-scarce situation? This study departs from the view that both human rights and peace-building are agendas with specific and unique contributions. In order to deal with overlapping claims that the two agendas sometimes formulate, in both conflict and post-conflict situations, this study suggests specific approaches in order to create synergy effects of agenda cooperation.

Assessment of Development Results

Global Warming and the Risen Lord

This book examines key emergent trends related to aspects of power, sovereignty, conflict, peace, development, and changing social dynamics in the African context. It challenges conventional IR precepts of authority, politics and society, which have proven to be so inadequate in explaining African

processes. Rather, this edited collection analyses the significance of many of the uncharted dimensions of Africa's international relations, such as the respatialisation of African societies through migration, and the impacts this process has had on state power; the various ways in which both formal and informal authority and economies are practised; and the dynamics and impacts of new transnational social movements on African politics. Finally, attention is paid to Africa's place in a shifting global order, and the implications for African international relations of the emergence of new world powers and/or alliances. This edition includes a new preface by the editors, which brings the findings of the book up-to-date, and analyses the changes that are likely to impact upon global governance and human development in policy and practice in Africa and the wider world post-2015.

Social Inequality in a Global Age

This book investigates the relationships between political violence, social violence and economic violence using examples from South Africa, Northern Ireland, Lebanon and Syria. It examines the cultural impact of war and argues that a culture of violence can explain the high levels of violence which are frequently found in post-war societies.

Global Basic Rights

An assessment of the capacity of the EU to coordinate actors and policies with regards to global development. The authors argue that the EU and its

member states have the potential to act for global development when they are able to improve policy and actor coherence, such as through better linking of bilateral and community programmes.

Arab Human Development Report 2009

This book explores the role of the welfare state in the overall wealth and wellbeing of nations and in particular looks at the American welfare state in comparison with other developed nations in Europe and elsewhere. It is widely believed that the welfare state undermines productivity and economic growth, that the United States has an unusually small welfare state, and that it is, and always has been, a welfare state laggard. This book shows that all rich nations, including the United States, have large welfare states because the socialized programs that comprise the welfare state—public education and health and social insurance—enhance the productivity of capitalism. In public education, the most productive part of the welfare state, for most of the 19th and 20th centuries, the United States was a leader. Though few would argue that public education is not part of the welfare state, most previous cross national analyses of welfare states have omitted education. Including education has profound consequences, undergirding the case for the productivity of welfare state programs and the explanation for why all rich nations have large welfare states, and identifying US welfare state leadership. From 1968 through 2006, the United States swung right politically and lost its lead in education and opportunity, failed to adopt universal

health insurance and experienced the most rapid explosion of health care costs and economic inequality in the rich world. The American welfare state faces large challenges. Restoring its historical lead in education is the most important but requires investing large sums in education, beginning with universal pre-school and in complementary programs that aid children's development. The American health insurance system is by far the most costly in the rich world, yet fails to insure one sixth of its population, produces below average results, crowds out useful investments in children, and is the least equitably financed. Achieving universal coverage will increase costs. Only complete government financing is likely to restrain long term costs. In memory of Robert J. Lampman Colleague, Co-author, Friend and Mentor

The European Union and Global Development

Aimed at undergraduates and post-graduates in the social sciences, as well as development practitioners, this textbook provides an introduction to the human development and capability approach; it also clarifies key concepts and fosters debate on a number of critical issues. The book offers new perspectives on a wide range of topics, which include the conceptualisation and measurement of well-being and inequality; the role of markets and economic growth in promoting development; the importance of democracy and public debate; culture and religion; health; equality and justice; and the connections between social and economic policy in addressing

poverty and inequality. Case studies from across the world are used to illustrate concepts and highlight the relevance of the approach in addressing contemporary development challenges. A set of questions accompanies each chapter for seminar discussion to help readers assimilate central points and apply the approach to diverse realities. This book provides a comprehensive introduction to the human development and capability approach for students and practitioners world-wide.

Food Movements Unite!

The contributors present empirical and theoretical insights on current debates on environmental change, adaptation and migration. While focusing on countries subject to environmental degradation, it calls for a regional perspective that recognises local actors and a systematic link between development studies and migration research.

Africa and International Relations in the 21st Century

Over 50 full-colour world maps and graphics break down hardcore statistics to provide a compelling analysis of all the political, social, economic and ecological nightmares that keep us awake at night. The world's car population has grown five times as fast as the human population over the last 50 years. Wal-Mart's sales revenue exceeds the GDP of 150 countries. Climate change may put 2.7 billion at risk of armed conflict. Germany generates more tourists

than anywhere else. Americans use 160 times more water than people in Rwanda. If you want to get behind the headlines and understand the world - from urbanization to globalization, terrorism to tourism, military spending to human rights - The State of the World Atlas is unmatched.

Radical Human Ecology

Human ecology - the study and practice of relationships between the natural and the social environment - has gained prominence as scholars seek more effectively to engage with pressing global concerns. In the past seventy years most human ecology has skirted the fringes of geography, sociology and biology. This volume pioneers radical new directions. In particular, it explores the power of indigenous and traditional peoples' epistemologies both to critique and to complement insights from modernity and postmodernity.

China and Post-Socialist Development

Studies of the global political economy have rarely engaged with development in the Caribbean, the thought of its indigenous intellectuals, or the non-sovereign territories of the region. Matthew Bishop compares the development of the independent English-speaking islands of St Lucia and St Vincent and their non-sovereign French neighbours, Martinique and Guadeloupe. By explaining how distinctive patterns of British and French colonialism and decolonisation came to bear on them, he

investigates how very different patterns of development have subsequently ensued, often with startling consequences in this era of globalization and crisis. By engaging with the empirical reality of the Caribbean, his study sheds light on a range of wider debates relating to development, indigenous thought, post-colonial sovereignty, small states, and the contemporary evolution of the global political economy.

Human Development Report 2007/2008

This year's Human Development Report explains why we have less than a decade to change course and start living within our global carbon budget, and how climate change will create long-run low human development traps, pushing vulnerable people into a downward spiral of deprivation.

a wide range of educational and professional backgrounds and to develop understanding of a diversity of approaches and traditions at different levels. This second edition includes: a complete update of the text, with increased coverage of major topics including ecosystems; production and consumption; business; urban sustainability; governance; new media technologies; conservation; leadership; globalization and global crises; sustainability literacy and learning; more examples from the Global South and North America, while retaining its unique coverage of first world countries; chapter aims at the start and summaries at the end of each chapter; glossary of key terms; a new chapter on Conservation with a focus on behaviour change and values; a brand new website which includes discussion of how projects are done on the ground, additional exercises and online cases, test questions and recommended readings and films. Offering boxed examples from the local to the global, Understanding Sustainable Development is the most complete guide to the subject for course leaders, undergraduates and postgraduates.

World Regional and Cultural Footprints and Environmental Sustainability

For every chapter, the Study Guide will include a "Preview" and "At A Glance" sections (both provide an overview of and objectives for the chapter). Each major topic includes a progress test, comprised of multiple-choice, matching, and/or true/false questions. The Guide also contains "Graphic

Organizers," which encourage students to complete graphs, charts, and flow diagrams that ultimately provide a visual synopsis of text material. End-of-chapter material includes "Something To Think About" sections, which contain thought provoking questions designed to encourage critical thinking and application of the material.

Climate Change and Energy Insecurity

Politically, as well as philosophically, concerns with human rights have permeated many of the most important debates on social justice worldwide for fully a half-century. Henry Shue's 1980 book on Basic Rights proved to be a pioneering contribution to those debates, and one that continues to elicit both critical and constructive comment. Global Basic Rights brings together many of the most influential contemporary writers in political philosophy and international relations - Charles Beitz, Robert Goodin, Christian Reus-Smit, Andrew Hurrell, Judith Lichtenberg, Elizabeth Ashford, Thomas Pogge, Neta Crawford, Richard Miller, David Luban, Jeremy Waldron and Simon Caney- to explore some of the most challenging theoretical and practical questions that Shue's work provokes. These range from the question of the responsibilities of the global rich to redress severe poverty to the permissibility of using torture to gain information to fight international terrorism. The contributors explore the continuing value of the idea of "basic rights" in understanding moral challenges as diverse as child labor and global climate change.

New Security Threats and Crises in Africa

The Arab Human Development Report

Global Warming and the Risen LORD moves beyond the old debates about climate change to a new conversation focusing on the tremendous opportunities there are and the biblical and spiritual resources we have been given to meet this threat. Filled with inspirational stories and sobering scientific research, Rev. An Unlikely Dilemma

“An Introduction to Changing India” provides a comprehensive view of the rapid changes occurring in India, particularly in the fields of culture, politics, economics and technology, population, environmental issues and gender. Having carried out anthropological research on kinship, gender issues, politics, class and caste, population issues and the appropriation of information technology in India since the 1990s, the authors draw from their own fieldwork and extensive reading of research reports in order to provide a comprehensive picture of Indian life.
