## **Books and Pamphlets, Including Serials and Contributions to Periodicals**

Over 220,000 entries representing some 56,000 Library of Congress subject headings. Covers all disciplines of science and technology, e.g., engineering, agriculture, and domestic arts. Also contains at least 5000 titles published before 1876. Has many applications in libraries, information centers, and other organizations concerned with scientific and technological literature. Subject index contains main listing of entries. Each entry gives cataloging as prepared by the Library of Congress. Author/title indexes.

**PL/I Structured Programming**

**MTS, Michigan Terminal System**

## **OS and DOS PL/I Language Reference Manual**

This comprehensive VSAM tutorial covers all important aspects of VSAM, including VSAM's role in some of the most common software products used in the IBM mainframe environment. It also includes useful questions and answers for self-study ranging from straightforward short answer questions to the analysis and development of theoretical concepts, and more.

### **Newsletter**

The primary purpose of this book is to serve as a reference for an overall view of higher level languages. The book brings together in one place, and in a consistent fashion, fundamental information on programming languages, including history, general characteristics, similarities, and differences. A second purpose of the book is to provide specific basic information on all the significant, and most of the minor, higher level languages developed in the United States. The third purpose of the book is to provide history and perspective for this particular aspect of the programming field. - Preface.

### **User's Memo**

The record of each copyright registration listed in the Catalog includes a description of the work copyrighted and data relating to the copyright claim (the

name of the copyright claimant as given in the application for registration, the copyright date, the copyright registration number, etc.).

### **Computer Methods for Literary Research**

This classic textbook by Eberhard Sturm is the only up-to-date PL/I book currently available in the English language which shows the range of the new PL/I on the computer platforms OS/2, Windows, AIX and z/OS – the basis being the new PL/I compiler from IBM. The language was extended by the package concept, abstract data types, attributes to communicate with C programs and more than a hundred BUILTIN functions. The book provides the basis for certification as an “IBM Certified PL/I Programmer/Developer”. Suitable for self-study, it introduces all areas of the language. It is a useful source of ideas and information for those programmers who already have a certain level of experience as well as those who only want to discover the variety of new language features.
