2015 Uniform Mechanical Code

This comprehensive code comprises all building, plumbing, mechanical, fuel gas and electrical requirements for one- and two-family dwellings and townhouses up to three stories. The IRC contains many important changes such as: An updated seismic map reflects the most conservative Seismic Design Category (SDC) based on any soil type and a new map reflects less conservative SDCs when Site Class A, B or D is applicable. The townhouse separation provisions now include options for using two separate fire-resistant-rated walls or a common wall. An emergency escape and rescue opening is no longer required in basement sleeping rooms where the dwelling has an automatic fire sprinkler system and the basement has a second means of egress or an emergency escape opening. The exemption for interconnection of smoke alarms in existing areas has been deleted. New girder/header tables have been revised to incorporate the use of #2 Southern Pine in lieu of #1 Southern Pine. New tables address alternative wood stud heights and the required number of full height studs in high wind areas.

A practical, comprehensive resource for commercial interior design *Designing Commercial Interiors* is the industry standard reference, now fully revised and expanded to reflect the latest developments in commercial interior design. This book guides you through the entire design process, from planning to execution, to teach you the vital considerations that will make your project a success. This new third edition includes new: Sustainability concepts for a variety of commercial spaces Coverage of accessibility, security, safety, and codes—and how these factors influence commercial design Chapters on design research, project process, and project management Drawings and photographs of design applications Supplemental instructor's resources Commercial interior design entails a much more complex set of design factors than residential design, and many of these considerations are matters of safety and law. This book walks you through the process to give you a solid understanding of the myriad factors in play throughout any commercial project, including how the global marketplace shapes designers' business activities. Whether it's a restaurant, office, lodging, retail, healthcare, or other facility, the interior designer's job is much more complicated when the project is commercial. *Designing Commercial Interiors* is an exhaustive collection of commercial design skills, methods, and critical factors for professionals, instructors, and those preparing for the NCIDQ exam.

The IECC addresses energy efficiency on several fronts including cost savings, reduced energy usage, conservation of natural resources and the impact of energy usage on the environment. Key changes include: Log homes designed in accordance with the standard ICC 400, Standards on the Design and Construction of Log Structures, are exempt from the building thermal envelope requirements of the IECC. The maximum allowable fenestration U-factors in Table R402.1.2 (for the prescriptive compliance path) for climates zones 3 through 8 have been reduced from the values in the 2015 edition. The ICC/RESNET 380 standard has been included as one of standards that can be used for determining the air leakage rate of a building or dwelling unit. The Energy Rating Index compliance alternative index values have been increased slightly however, the method for determining an index is now required to be in accordance with standard ICC/RESNET 301. Revisions to interior and exterior lighting power budgets and better clarity for

lighting controls. Clarity that regardless of design methodology, system commissioning is required. New limits on heated or cooled vestibules. Mechanical provisions reorganized based on equipment type rather than design methodology.
