This book tells dozens of stories of such discoveries, of the treasured old tractor parked in a shed since 1927, of the pristine model unearthed at an estate sale, of the broken-down old beauty stashed in a barn where generations of children have made

their secret hideaways. These are the classic tractors that are often as hard to find as a needle in a haystack—but far more fun to discover, as all of these delightful stories make abundantly clear.

Dictionary of Civil Engineering

Based on 25 years of research that combed every historical and anthropological record of Native American ways, this unprecedented culinary dictionary documents the food uses of 1500 plants by 220 Native American tribes from early times to the present. Like anthropologist Daniel E. Moerman's previous volume, *Native American Medicinal Plants*, this extensive compilation draws on the same research as his monumental *Native American Ethnobotany*, this time culling 32 categories of food uses from an extraordinary range of species. Hundreds of plants, both native and introduced, are described. The usage categories include beverages, breads, fruits, spices, desserts, snacks, dried foods, and condiments, as well as curdling agents, dietary aids, preservatives, and even foods specifically for emergencies. Each example of tribal use includes a brief description of how the food was prepared. In addition, multiple indexes are arranged by tribe, type of food, and common names to make it easy to pursue specific research. An essential reference for anthropologists, ethnobotanists, and food scientists, this will also make fascinating reading for anyone interested in the history of wild and cultivated local foods and the remarkable practical botanical knowledge of Native American forbears.

Farmall Regular and F-Series

I am pleased to present a work which marks a milestone in the history of public works and, more precisely, in that of permanent structures—a comprehensive dictionary of Civil Engineering terms. Since the beginning of time, Man has always tried to find a means to clear the obstacles which nature erected to displace him. With the first tree trunk thrown across a river, man sought to improve the crossing structure. After the invention of the wheel, and to satisfy his thirst for conquest (Roman ways), and comfort (aqueducts), man built bridges that became a preremptory necessity to move quickly. Thus, Man started to build wooden and masonry works. With the passing centuries, the builders became masters in the art of building masonry works. Then came the Industrial Revolution and the advent of the steel (1864), which was closely followed by the invention of the reinforced concrete (1855). The need for railways and improving the road network inspired great works of crossing such as viaducts and tunnels. The boom of the railway network and the development of the car required the construction of an increasing number of new structures. This phenomenon continues today with hundreds of structures built each year throughout the world.

The authors chronicle changes and improvements and provide hard-to-find information on design and development of the models, serial numbers, codes, production numbers, and anything else an F series enthusiast could want to know. Indispensable to anyone restoring a Farmall F series tractor, the book also provides a clear and fascinating picture of an icon of agricultural history and the machinery of Americana. The stock market crashed and the countrys fields turned to dust, and the tractor, that workhorse of American agriculture, was one more casualty. But in the face of disaster, International Harvester kept improving on its successful Farmall tractor and finally arrived at the F series, which includes some of the finest and best-loved tractors of all time. These are the tractors that pulled American farmers out of the Great Depression. Archival and modern color photographs and detailed text follow the series from the F-12, F-14, and the vastly popular F-20 that replaced the Farmall Regular to huge machines like the F-30, which was better-suited to breaking the Great Plains.
