"What is a person? Surprisingly little attention is given to this question in psychology. For much of the past century, psychology has tended to focus on the systematic study of processes rather than on the persons who enact and embody them. In contrast to the reductionist picture of much mainstream theorizing, which construes persons as their mental lives, behaviours or neurophysiological particulars, The Psychology of Personhood presents persons as irreducibly embodied and socially situated beings. Placing the study of persons at the centre of psychology, this book presents novel insights on the typical, everyday actions and experiences of persons in relation to each other and to the broader society and culture. Leading scholars from diverse academic disciplines paint an integrative portrait of the psychological person within evolutionary, historical, cultural, developmental and everyday contexts"--

Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

The Chinese are inordinately proud of having invented, among a whole host of other things, the compass (without which the world would have got lost), paper (without which books would not exist), the printing press (ditto), porcelain (no pretty matching chinaware), silk (no decadence), pasta (what would the Italians eat?), the wheelbarrow (how would civilisation have fared without it?) and the bristle toothbrush. A guide to understanding the Chinese which dispels or confirms preconceived prejudices with humor and insight.

From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

This is a text for a one-quarter or one-semester course in probability, aimed at students who have done a year of calculus. The book is organised so a student can learn the fundamental ideas of probability from the first three chapters without reliance on calculus. Later chapters develop these ideas further using calculus tools. The book contains more than the usual number of examples worked out in detail. The most valuable thing for students to learn from a course like this is how to pick up a probability problem in a new setting and relate it to the standard body of theory. The more they see this happen in class, and the more they do it themselves in exercises, the better. The style of the text is deliberately informal. My experience is that students learn more from intuitive explanations, diagrams, and examples than they do from theorems and proofs. So the emphasis is on problem solving rather than theory.

This edited book examines European external interventions in human security, in order to illustrate the evolution and nature of the European Union as a global political actor. In 2003, the EU deployed its first external mission under the European Security and Defence Policy (ESDP) with a military force to the former Yugoslav Republic of Macedonia. Since then it has instigated over 18 civilian and military missions to deal with humanitarian crises all over the world. This book presents a series of eight case studies of external interventions by the EU covering the Balkans, Africa, the Middle East, Afghanistan and Indonesia, to illustrate the nature of the EU as a global actor. Using the concept of human security to assess the effectiveness of these missions in meeting the EU's aim of being a 'force for good in the world', this study addresses two key issues: the need for an empirical assessment of EU foreign and security policies based on EU intervention in conflict and post-conflict situations and the idea of 'human security' and how this is applied in European foreign policy. This book will be of great interest to students of European Security, EU politics, human security, post-conflict reconstruction, and IR in general. Mary Kaldor is Co-Director of the Centre for the Study of Global Governance, London School of Economics and Political Science (LSE). Prior to this she worked at Sussex University as Jean Monnet Reader in Contemporary European

Studies. Mary Martin is a Research Fellow at the Centre for the Study of Global Governance, the London School of Economics. From 2006-2009 she was co-ordinator of the Human Security Study Group. The novel 'Crimes of a Guilty Land' follows the Hart and Beauchamp families through some turbulent years of the nineteenth century. It opens in the summer of 1825 when young Roger Hart, while enjoying his first visit to the beach in Rhode Island, witnesses a tragedy. The events of that day will haunt him for the rest of his life. Many years later, just prior to the Civil War, Roger Hart becomes involved in a risky undertaking to begin to teach the children of slave families in Virginia. That experience leads him to Harpers Ferry and the disastrous John Brown raid on the US Armory in 1859. There he meets the Beauchamp family who became involved in the John Brown affair with tragic results. The Hart and Beauchamp families find themselves bound together with romance and violence as the Civil War devastates the town of Harpers Ferry and as family members find themselves caught up in the Petersbug Battle of the Crater. Both of the families also become involved with a freed slave family that includes a young boy named Brownie. Ten years after the war, Roger finds himself describing all of those events to a curious Brownie. Brownie is anxious to hear his family's story while Hart is determined to pass on to the boy a sense of goodness and a respect for tolerance along with the need for an education. Hart succeeds, and Brownie grows to become a highly regarded teacher. The reader first meets Brownie as he looks back on his life. It is 1941 and America is at war again. But for Brownie, now a retired teacher in West Virginia, an old struggle is still being waged in this country as he witnesses the continued indignity and cruelty of segregation. A moment of violence causes him to reflect on his own life experience and he is drawn to write down his remembrances of his family's involvement in the struggles during the final years of slavery, the John Brown raid at Harpers Ferry, and then the Civil War and its aftermath. He reflects on how his family has experienced drama and tragedy as well as romance and humor during encounters with intolerance - including racial, religious and economic. Brownie recalls the last words of John Brown as he went to the executioner's gallows. Brown wrote on a slip of paper that "...the crimes of this guilty land will never be purged away but with blood." But after so much blood shed over so many years, Brownie is led to question how much progress has been made during his life time, and then on what a seventy five year old man might be able to contribute to changing things.

Jet skis are immensely popular coastal 'playthings' - but they need careful handling and maintenance. This is a highly illustrated hands-on manual providing advice , hints and tips on choosing, driving, handling, maintaining and repairing a jet ski - the complete owner's manual. Many owners will prefer to service and maintain their own machine (much like they would with an outboard motor), rather than take it to a service agent, and the step by step photos in this book will enable them to do just this. This is a brand new, highly illustrated step-by-step guide for the jet ski owner (of which there are many in the UK alone) which provides helpful advice on all the aspects of ownership, handling and maintenance. There is no other book on the market which does this.
