Control systems are found in a wide variety of areas, including chemical processing, aerospace, manufacturing, and automotive engineering. Beyond the controller, sensors and actuators are the most important components of the control system, and students, regardless of their chosen engineering field, need to understand the fundamentals of how these components work, how to properly select them, and how to integrate them into an overall system. In Sensors and Actuators: Control System Instrumentation, bestselling author and expert Clarence de Silva outlines the fundamentals, analytical concepts, modeling and design issues, technical details, and practical applications of these devices. This text begins with a general introduction to control and various types of control systems, followed by component interconnection, signal conditioning, and performance specification and analysis. The author then systematically describes important types, characteristics, and operating principles of analog sensors, digital transducers, stepper motors, continuous-drive actuators, and mechanical transmission components, progressing from basic to more advanced concepts. Throughout the book, convenient snapshot windows summarize important and

advanced theory and concepts, accompanied by numerous examples, exercises, case studies, and end-of-chapter problems. Ideally suited to both senior undergraduate and first-year graduate courses, Sensors and Actuators: Control System Instrumentation builds a firm foundation for future work in control and can be easily followed by students from almost any engineering discipline.

Few sporting classics last 100 years and fewer still continue to attract global interest in the way the Isle of Man TT does. The Tourist Trophy originated as a car race in 1904 but has been the domain of motorcycles since 1907. It is widely regarded as the last of the great road races in motor sport, annually drawing thousands of dedicated fans to a gem of an island in the middle of the Irish Sea. Steeped in nostalgia and brimming with atmosphere, controversy and spine-chilling action, the magic of the oldest race on the international calendar is captured in a neatly-sized book packed with 120 monochrome and full colour images. TT Centenary goes right back to the original St John's Course and also includes images from the Clypse Course used for a short period in the 1950's. The awesome 37.7 mile Snaefell Mountain Course, which was the home of the British Motorcycle Grand Prix for four decades, remains the ultimate challenge to every discerning road racer.

"I read on. And then it happens. On page 89. Mary is humiliated, and I know I have to step in. There she is, in an ill-fitting, wine-colored gown that doesn't do anything for her mousy complexion, gathering up her music, when I pass by, and spill my glass of punch right on her dress. I turn, and there is Kevin, dressed in a scarlet coat and all the rest of the uniform of a British Soldier, circa 1811. 'What are you doing here?' I ask. 'Well, this is the part I'm up to in the book.'" The smart middle child in a blue-collar family identifies with Mary, the middle child in Jane Austen's Pride and Prejudice. When Alice enters Mary's world and makes changes in both their lives, she learns that first impressions aren't always right.

For nearly 80 years, shaft-drive boxer twins have traditionally formed the backbone of the BMW motorcycle line-up. For many enthusiasts of the Bavarian marque the classic BMW twin was the R90S of 1973-76. Over the decades, successive generations of durable machines - including the R100S, fully-faired R100RS, four-cylinder K-series, high-performance R1100RS and an entire family of touring and sporting models ranging from 850 to 1200cc - would ensure the BMW boxer twins a place in the Haynes "Great Bikes" series. This book covers: historical context, racing, the wartime R75 and R69S; the "75" series which enabled BMW to compete with the high-performance Japanese machines; the R90S, the "76" and Superbike performance; the R100RS, the "77" and the touring R100RT; smaller

twins, smaller potential; the R89G/S, including a Paris-Dakar version; rationalization of the boxer range, and the new twins that included four-valve heads and electronic engine management; and technical specifications from 1969 to 2003.
