companion, and you can take it with you wherever you wish. The left-hand page is like a buffet table with a variety of thoughts about the Advent and Christmas seasons, the feast of the day, or various traditions and customs. The key is the right-hand page where we'll reflect on a Gospel passage. This year, the Little Blue Book will use the Gospel passages assigned for the weekday Masses of these seasons. This will give many people a chance to reflect on and pray passages from all of the Gospels that they may have seldom heard proclaimed or preached about at liturgy.

Step away from the propane tank. Surrender all of your notions about barbecue. Forget everything you've ever learned about cooking with charcoal and fire. It is all wrong. Get it right with the "Five Easy Lessons" program, which includes over 130 recipes and step-by-step instructions for setting up and cooking low and slow on a Weber Smokey Mountain, an offset smoker, or a kettle grill. This program is guided by a singular philosophy: Keep It Simple, Stupid. Do exactly as Gary says, don't even think about opening the lid before it's time, and you will learn:

- What gear you do and, more importantly, don't need
- Exactly how to start and maintain a proper fire (without lighter fluid)
- All about marinades, brines, and rubs
- To use your senses and trust your instincts (instead of thermometers)
- How to make delicious, delicious barbecue

Glass Town

Since its inception some fifty years ago, cognitive science has seen a number of sea changes. Perhaps the best known is the development of connectionist models of cognition as an alternative to classical, symbol-based approaches. A more recent - and increasingly influential - trend is that of dynamical-systems-based, ecologically oriented models of the mind. Researchers suggest that a full

understanding of the mind will require systematic study of the dynamics of interaction between mind, body, and world. Some argue that this new orientation calls for a revolutionary new metaphysics of mind, according to which mental states and processes, and even persons, literally extend into the environment. This book is a guide to this movement in cognitive science. Each chapter tackles either a specific area of empirical research or specific sector of the conceptual foundation underlying this research.

A graphic novel about the Brontë siblings, and the strange and marvelous imaginary worlds they invented during their childhood Glass Town is an original graphic novel by Isabel Greenberg that encompasses the eccentric childhoods of the four Brontë children—Charlotte, Branwell, Emily, and Anne. The story begins in 1825, with the deaths of Maria and Elizabeth, the eldest siblings. It is in response to this loss that the four remaining Brontë children set pen to paper and created the fictional world that became known as Glass Town. This world and its cast of characters would come to be the Brontës' escape from the realities of their lives. Within Glass Town the siblings experienced love, friendship, war, triumph, and heartbreak. Through a combination of quotes from the stories originally penned by the Brontës, biographical information about them, and Greenberg's vivid comic book illustrations, readers will find themselves enraptured by this fascinating imaginary world.

The World Is Open

Video Research in the Learning Sciences is a comprehensive exploration of key theoretical, methodological, and technological advances concerning uses of digital video-as-data in the learning sciences as a way of knowing about learning, teaching, and educational processes. The aim of the contributors, a community of scholars using video in their own work, is to help usher in video scholarship and supportive technologies, and to mentor video scholars, so that video research will meet its maximum potential to contribute to the growing knowledge base about teaching and learning. This volume contributes deeply to both to the science of learning through in-depth video studies of human interaction in learning environments—whether classrooms or other contexts—and to the uses of video for creating descriptive, explanatory, or expository accounts of learning and teaching. It is designed around four themes—each with a cornerstone chapter that introduces and synthesizes the cluster of chapters related to it: Theoretical frameworks for video research; Video research on peer, family, and informal learning; Video research on classroom and teacher learning; and Video collaboratories and technological futures. Video Research in the Learning Sciences is intended for researchers, university faculty, teacher educators, and graduate students in education, and for anyone interested in how knowledge is expanded using video-based technologies for inquiries about learning and teaching. A Good Childhood

Photoshop is one of those programs that's so cool you just want to dive right in and start creating--but by plunging in head-first, without any guidance, you're likely to miss a lot. There's a solution: With this book, you learn by doing, getting your feet wet immediately as you progress through a series of hands-on projects that build on your growing Photoshop knowledge. Simple step-by-step instructions, review questions at the end of each chapter, and a companion CD with all of the book's project files make learning a breeze as the Adobe Creative Team takes you on a self-paced tour of the image-editing powerhouse. Completely revised to cover all of Photoshop CS's new features (including a new file browser, nonsquare pixel support, Layer comps for creating design variations, and more), the book starts with an introductory tour of the software and then progresses on through lessons on everything from Photoshop's interface to more complex topics like color management, Web graphics, and photo retouching.

Eating the Sun

This book highlights the state of the field in the new, provocative line of research into the cognition and behavior of the domestic dog. Eleven chapters from leading researchers describe innovative methods from comparative psychology, ethology

and behavioral biology, which are combined to create a more comprehensive picture of the behavior of *Canis familiaris* than ever before. Each of the book's three parts highlights one of the perspectives relevant to providing a full understanding of the dog. Part I covers the perceptual abilities of dogs and the effect of interbreeding. Part II includes observational and experimental results from studies of social cognition – such as learning and social referencing – and physical cognition in canids, while Part III summarizes the work in the field to date, reviewing various conceptual and methodological approaches and testing anthropomorphisms with regard to dogs. The final chapter discusses the practical application of behavioral and cognitive results to promote animal welfare. This volume reflects a modern shift in science toward considering and studying domestic dogs for their own sake, not only insofar as they reflect back on human beings.

Swordsmen of Gor

From the #1 bestselling author of *Inside of a Dog*—“an incredible journey into the olfactory world of man’s best friend” (O, The Oprah Magazine), Alexandra Horowitz’s follow-up to her New York Times bestseller explains how dogs experience the world through their most spectacular organ—the nose. In her “fascinating book...Horowitz combines the expertise of a scientist with an easy, lively writing style” (The New York Times Book Review) as she imagines what it is

like to be a dog. Guided by her own dogs, Finnegan and Upton, Horowitz sets off on a quest through the cutting-edge science behind the olfactory abilities of the dog. In addition to speaking to cognitive researchers and smell experts, Horowitz visits detection-dog trainers and training centers; she meets researchers working with dogs to detect cancerous cells and anticipate epileptic seizure or diabetic shock; and she even attempts to smell-train her own nose. As we come to understand how rich, complex, and exciting the world around us is to the canine nose, Horowitz changes our perspective on dogs forever. Readers will finish this book feeling that they have broken free of their human constraints and understanding smell as never before; that they have, for however fleetingly, been a dog. And, as The Boston Globe says about Being a Dog, “becoming more doglike, not surprisingly, can make anyone’s life a little more vivid.”

Domestic Dog Cognition and Behavior

Every day the newspapers lament the problems facing our children - broken homes, pressures to eat and drink, the stress of exams. The same issues are discussed in every pub and at every dinner party. But is life really more difficult for children than it was, and if so why? And how can we make it better? This book, which is a result of a two year investigation by the Children's Society and draws upon the work of the UK's leading experts in many fields, explores the main stresses and influences to which every child is exposed - family, friends, youth

culture, values, and schooling, and will make recommendations as to how we can improve the upbringing of our children. It tackles issues which affect every child, whatever their background, and questions and provides solutions to the belief that life has become so extraordinarily difficult for children in general. The experts make 30 specific recommendations, written not from the point of view of academics, but for the general reader - above all for parents and teachers. We expect publication to be a major event and the centre of widespread media attention.

Treatment integrity is the extent to which an intervention is implemented as its originators intended. The book presents the latest thinking on how treatment integrity contributes to evidence-based practice in educational, community, and healthcare settings. Authoritative and up to date, this volume is a much-needed resource for all professionals supervising, providing, or evaluating intervention services, including researchers and practitioners in clinical, counseling, and school psychology; child and adolescent psychiatry; social work; communication disorders; special and general education; program evaluation; and educational leadership.

The International Astronomical Union (IAU) was founded in 1919, in the wake of the First World War, together with its sister Unions in related natural sciences. It will thus turn 100 years in 2019. Written by a mixed team of insiders and outsiders, this book presents the IAU in the changing context of the historical, scientific and technological development of astronomy during the past 100 years. While much important scientific progress took place already before 1945, the book naturally focuses on the accelerating evolution during the second half of the century. In the past few decades, the previously narrow IAU focus on organising professional astronomy has broadened to include societally relevant activities such as addressing the hazard of asteroid impacts, the planetary status of Pluto in the Solar System, and the hugely successful International Year of Astronomy. Most recently, it is spearheading a combination of science literacy and public outreach. The book will be of interest to professional astronomers as well as an astronomically interested general audience. The book features live personal interviews with as many of the key actors as still possible.

Over the centuries Britain's soil has yielded countless spectacular hoards of ancient coins and other artefacts, affording us priceless insights into our ancestors' lives – and it is not only such large finds that await discovery but also many thousands of individual pieces. Wonderfully, discoveries both minor and momentous are frequently made not by teams of professionals but by amateur archaeologists and metal-detector enthusiasts, for whom this book is intended as a helpful companion. It provides a catalogue of commonly encountered coins, dating from ancient times until the modern day, explaining their historical context, how they might have come to be lost and where they may be found today.

Wherever there is greenery, photosynthesis is working to make oxygen, release energy, and create living matter from the raw material of sunlight, water, and carbon dioxide. Without photosynthesis, there would be an empty world, an empty sky, and a sun that does nothing more than warm the rocks and reflect off the sea. *Eating the Sun* is the story of a world in crisis; an appreciation of the importance of plants; a history of the earth and the feuds and fantasies of warring scientists; a celebration of how the smallest things, enzymes and pigments, influence the largest things, the oceans, the rainforests, and the fossil fuel economy. Oliver Morton offers a fascinating, lively, profound look at nature's greatest miracle and sounds a much-needed call to arms—illuminating a potential crisis of climatic chaos and explaining how we can change our situation, for better or for worse.

Exploring the Southern Sky

On the brutal planet known as Counter Earth, an alien threat looms . . . Fresh from his exploits in the Steel Worlds, home of the Kurii, a savage alien race intent on conquering Gor, Tarl Cabot has been returned to an isolated beach, at coordinates apparently specified by the Priest-Kings, the masters of Gor and the enemy of the Kurii. His only companions are his beautiful new slave Cecily and Ramar, a ferocious sleen bred in the Steel Worlds to hunt and kill. But why has he been returned to such a remote spot? Did the Priest-Kings wish their former agent to serve them once more? Did the Kurii intend to use Cabot to further their own ends? The truth, as Tarl will learn, is darker and deeper than either of these possibilities. Rediscover this brilliantly imagined world where men are masters and women live to serve their every desire. *Swordsmen of Gor* is the 29th book in the Gorean Saga, but you may enjoy reading the series in any order.

Merchants of Peace

This book explores the key issues relating to links between exchange rate instability and domestic inflation, including real exchange rate and interest rate manifestations, and the co-variability of exchange rates and commodity prices. The common theme throughout is the behaviour of asset prices and interest rates in international markets. A number of interrelated questions regarding the interactions of exchange rates, interest rates and commodity prices are posed: * Why is purchasing power parity invariably controversial? * Despite overwhelming evidence that sterilised central bank interventions are impotent, why do major industrialised countries (such as the G-7) continue to look for accords to stem exchange rate volatility? * Why are the currencies of resource-based economies

depreciating when the commodity prices are holding up? * Has the link between exchange rates and commodity prices collapsed? * In a world of increasing globalisation, why are interest rate movements so poorly correlated across countries?

It's a Sistah Thing

We can't shoot good pictures without good lighting, no matter how good the newest cameras are. Shooting under available light gives exposure, but lacks depth, contrast, contour, atmosphere and often separation. The story could be the greatest in the world, but if the lighting is poor viewers will assume it's amateurish and not take it seriously. Feature films and TV shows, commercials and industrial videos, reality TV and documentaries, even event and wedding videos tell stories. Good lighting can make them look real, while real lighting often makes them look fake. Lighting for Cinematography, the first volume in the new CineTech Guides to the Film Crafts series, is the indispensable guide for film and video lighting. Written by veteran gaffer and cinematographer David Landau, the book helps the reader create lighting that supports the emotional moment of the scene, contributes to the atmosphere of the story and augments an artistic style. Structured to mimic a 14 week semester, the chapters cover such things as lighting for movement, working with windows, night lighting, lighting the three plains of action and non-fiction lighting.
