Anti-corruption Training Programmes in Central and Eastern Europe

REGINE is a research project on regularisation practices in the European Union. The aim of the project is to provide a thorough mapping of practices relating to the regularisation of third country nationals illegally resident in EU Member States. Two additional non-EU countries - Switzerland and the US - will also be covered to gain insights in regularisation practices and the impact of regularisations elsewhere. In examining regularisation practices, the project also investigates the relationship of regularisation policies to the overall migration policy framework, including to protection issues and refugee policies. Moreover, the project examines the political position of different stakeholders towards regularisation policies on the national level. Finally, the project examines potential options for policies on regularisation on the European level, incorporating Member States as well as other stakeholders' views on possible instruments on the European level.

Health Care Law-making in Central and Eastern Europe

The Routledge Handbook of Archaeological Human Remains and Legislation

The book provides a critical overview of innovation policy in Europe and a synopsis of the current institutional framework of Europe shaped after the Europe2020 strategy and in view of the upcoming Horizon2020 agenda. What emerges is a rather gloomy outlook for the future of Europe's innovation, unless EU institutions and Member States will decide to streamline existing policies and build a "layered" model of innovation, in which governments act as investors in key enabling infrastructure such as ICT and education; as enablers of large technology markets where researchers and entrepreneurs can meet; and as purchasers of innovation when key societal challenges are at stake. The book contains proposals for the future innovation strategy of the EU and a specific analysis of areas such as the unitary patent, the transfer of technology (particularly as far as climate-related technologies and IP markets are concerned), standardization, and the digital agenda.

BNA's Eastern Europe Reporter

The Comprehensive Economic and Trade Agreement (CETA) is a challenging project that will kick-start enormous changes in trade policy-making as well as in market openness in Canada. It will mark the EU's efforts to re-make the Atlantic Economy. This book provides deep insights into the ambiguity of the project and addresses the implications of a rapidly changing global economy for trade policy. Offering analysis of the financial industry, banking, trade policy, climate change strategy, and the Euro exchange rate, this book should be of interest to students and policy-makers alike.

Legal Obstacles to the Application of Nature Conservation Legislation

The study is based on information provided by the health administrations of 25 out of 32 member states of the who, european region, the material collected represents precise, up-to-date and complete data on the most important features of health legislation of europe and its evolution during a span of 13 years. The country profiles have been systematically presented to permit an easy reference to the main items for comparison purposes and to show how they relate to one another in several countries.

REGINE - Regularisations in Europe

Planning Control in Western Europe

Recent advances in techniques and understanding in the fields of genetics, embryology and reproductive biology have opened up new ways to treat a wide range of medical problems. They range from new options for infertility treatment and pre-implantation genetic diagnosis to stem-cell-based therapies for debilitating diseases. Since all these approaches involve the manipulation of human gametes, embryos or embryonic cells, and could also permit more contentious uses, they have stimulated a controversial debate as to what aims are desirable and to what extent experiments on human embryos are morally permissible, if permissible at all. The situation is further complicated by the fact that scientific projects are increasingly realized through international co-operation and that patients are increasingly ready to seek morally contentious medical treatment wherever it is available and thus to bypass national legislation. In view of this situation the Europäische Akademie assembled a temporary interdisciplinary project group in which scientists from universities and non-university research organizations in Europe working on the relevant subjects were brought together and charged with establishing a knowledge base and providing suggestions for long-term solutions that would be acceptable for society. Presented here are the results of this project, ranging from a discussion of the theoretical and practical possibilities in human-embryo experimentation and its alternatives in research on adult stem cells, a comparison of the situations and prospects of regulation of embryo research in Europe, a survey of European public attitudes, and a philosophical analysis of the arguments and argumentative strategies used in the debate.

Integrated Pollution Control in Europe and North America

Comprehensive sexuality education: the challenges and opportunities for scaling-up

Recent years have witnessed a significant acceleration in the revision of forest laws around the world. Forest law increasingly recognizes the multiple interests involved in or affected by forest management, with greater attention given to the environmental and social roles of forest resources and to their sustainable management and use. In addition, renewed emphasis is being placed on the involvement of a wider range of public and private actors. Issues in which forest laws have been reoriented include local forest and private management, the environmental functions of forests, forest management planning and forest utilization contracts.

Discrimination on Grounds of Sexual Orientation and Gender Identity in Europe - 2nd Edition

This book provides a practical handbook for legislation. Written by a team of experts, practitioners and scholars, it invites national institutions to apply its

teachings in the context of their own drafting manuals and laws. Analysis focuses on general principles and best practice within the context of the different systems of government in Europe. Questions explored include subsidiarity, legitimacy, efficacy, effectiveness, efficiency, proportionality, monitoring and regulatory impact assessment. Taking a practical approach which starts from evidence-based rationality, it represents essential reading for all practitioners in the field of legislative drafting.

Drafting Legislation

The book deals with the main themes in implementing international space law vis-à-vis private enterprise theme by theme, with a specific focus on Europe in view of the complicating roles of ESA and the European Union in this context.

Texts adopted at the third part of the 2004 ordinary session of the Parliamentary Assembly, 21-25 June 2004

Following on from the first volume, this unique book is the only collection of native analyses of the status of legislation in 30 European jurisdictions plus the EU. Each chapter, written by a national authority in the legislative field, presents and critically assesses: - the national constitutional environment and its connection with EU law; - the nature and types of legislation; - the legislative process; - the drafting process; - jurisprudence conventions; - the training of drafters. The book opens with a comparative chapter on these six themes, and concludes with an analysis of trends and best practices in Europe. Legislation in Europe is a necessary addition to law and policy libraries, law-making institutions and agencies, and an invaluable tool for constitutional and drafting academics and practitioners.

Embryo Research in Pluralistic Europe

Strengthening and Developing Voluntary Farmers' Organizations in Eastern and Central Europe

Methodologies and legislative frameworks regarding the archaeological excavation, retrieval, analysis, curation and potential reburial of human skeletal remains differ throughout the world. As work forces have become increasingly mobile and international research collaborations are steadily increasing, the need for a more comprehensive understanding of different national research traditions, methodologies and legislative structures within the academic and commercial sector of physical anthropology has arisen. The Routledge Handbook of Archaeological Human Remains and Legislation provides comprehensive

information on the excavation of archaeological human remains and the law through 62 individual country contributions from Europe, Asia, Africa, North America, South America and Australasia. More specifically, the volume discusses the following: What is the current situation (including a brief history) of physical anthropology in the country? What happens on discovering human remains (who is notified, etc.)? What is the current legislation regarding the excavation of archaeological human skeletal remains? Is a license needed to excavate human remains? Is there any specific legislation regarding excavation in churchyards? Any specific legislation regarding war graves? Are physical anthropologists involved in the excavation process? Where is the cut-off point between forensic and archaeological human remains (e.g. 100 years, 50 years, 25 years)? Can human remains be transported abroad for research purposes? What methods of anthropological analysis are mostly used in the country? Are there any methods created in that country which are population-specific? Are there particular ethical issues that need to be considered when excavating human remains, such as religious groups or tribal groups? In addition, an overview of landmark anthropological studies and important collections are provided where appropriate. The entries are contained by an introductory chapter by the editors which establish the objectives and structure of the book, setting it within a wider archaeological framework, and a conclusion which explores the current European and world-wide trends and perspectives in the study of archaeological human remains. The Routledge Handbook of Archaeological Human Remains and Legislation makes a timely, much-needed contribution to the field of physical anthropology and is unique as it combines information on the excavation of human remains and the legislation that guides it, alongside information on the current state of physical anthropology across several continents. It is an indispensable tool for archaeologists involved in the excavation of human remains around the world.

National Space Legislation in Europe

Comparative Study of Atomic Legislation in Europe

APEC-OECD Co-operative Initiative on Regulatory Reform Proceedings of the Fourth APEC-OECD Workshop on Regulatory Reform Vancouver, Canada, October 2003

East Europe

This book is the first comprehensive account of the International Labour Organization's 100-year history. At its heart is the concept of global social policy,

which encompasses not only social policy in its national and international dimensions, but also development policy, world trade, international migration and human rights. The book focuses on the ILO's roles as a key player in debates on poverty, social justice, wealth distribution and social mobility subjects and as a global forum for addressing these issues. The study puts in perspective the manifold ways in which the ILO has helped structure these debates and has made – through its standard-setting, technical cooperation and myriad other activities – practical contributions to the world of work and to global social policy.

Europe, Canada and the Comprehensive Economic Partnership Agreement

Adult Education in Continental Europe

Many people in Europe are stigmatised because of their sexual orientation or gender identity and cannot fully enjoy their universal human rights. Some of them are victims of violence, others have fled to Europe from countries where they risk being persecuted. Organisations representing lesbian, gay, bisexual and transgender (LGBT) persons have been denied registration or banned from organising peaceful meetings in some states in Europe. Too few politicians have taken a firm stand against homophobic and transphobic expressions, discrimination and violence. This report presents the results of the largest socio-legal study ever carried out on discrimination on grounds of sexual orientation and gender identity in the 47 member states of the Council of Europe. Six thematic chapters give a broad overview of the human rights situation of LGBT persons and recommendations are provided for developing and implementing effective measures to address discrimination. The report is intended as a tool for dialogue with authorities and other stakeholders. It constitutes a baseline study for further action in both legislative and policy fields to ensure that all LGBT people can effectively exercise their human rights.

Guide to Legislation on Restrictive Business Practices, Europe and North America

From credit-card purchases to electronic fingerprints, the amount of personal data available to government and business is growing exponentially. All industrial societies face the problem of how to regulate this vast world of information, but their governments have chosen distinctly different solutions. In *Protectors of Privacy*, Abraham L. Newman details how and why, in contrast to the United States, the nations of the European Union adopted comprehensive data privacy for both the public and the private sectors, enforceable by independent regulatory agencies known as data privacy authorities. Despite U.S. prominence in data technology, Newman shows, the strict privacy rules of the European Union have been adopted far more broadly across the globe than the self-regulatory approach championed by the United States. This rift has led to a series of trade and security disputes between the United States and the European Union. Based on many interviews with politicians, civil servants, and representatives from business and NGOs, and supplemented with archival sources, statistical analysis, and examples, *Protectors*

of Privacy delineates the two principal types of privacy regimes-comprehensive and limited. The book presents a theory of regulatory development that highlights the role of transgovernmental networks not only in implementing rules but also in actively shaping the political process surrounding policymaking. More broadly, Newman explains how Europe's institutional revolution has created in certain sectors the regulatory capacity that allows it to challenge U.S. dominance in international economic governance.

Highlights of Current Legislation and Activities in Mid-Europe

Regional Policy and Planning in Europe explores the ways regional policy and planning systems across Europe have been influenced by: * economic and monetary union * the impending enlargement of the European Union * the devolution of administrative power from central government to regional authorities * the increased importance of environmental and urban issues. Presenting a comprehensive overview of the economic basis of integration, this book examines the evolution of various systems of government, planning and forms of devolution.

National Space Legislation in Europe

Transformation and Migration in Central and Eastern Europe

This volume, developed by the Observatory together with OECD, provides an overall conceptual framework for understanding and applying strategies aimed at improving quality of care. Crucially, it summarizes available evidence on different quality strategies and provides recommendations for their implementation. This book is intended to help policy-makers to understand concepts of quality and to support them to evaluate single strategies and combinations of strategies.

Protectors of Privacy

Most of the European countries are confronted with health care system reforms. In Central and Eastern Europe, however, the countries face specific challenges. Whereas "socialist" governments traditionally have been deeply involved in all facets of health care, the general process of initiated market-oriented reforms has also affected the nature and scope of government intervention in health care. Stimulated by the successes of concepts such as decentralisation, deregulation, and privatisation in order to create a more flexible market economy, policy-makers also began to apply such notions to the health care sector. The experiences in the early 1990s however, revealed certain devastating effects of transposing the general concept of market competition to the field of health care. One valuable lesson of those developments was that liberalising relations in health care necessitates a certain degree of government intervention. Furthermore, the nature and scope of Central and Eastern European health care reforms differed from country to country with no uniform "blueprint" for reform, derived from emulating Western European experiences, being readily available. Nevertheless, previous experiences in reforming health care may provide us with valuable lessons. Their significance needs, nonetheless, to be reviewed in accordance with specific

national setting.

Anti-corruption in Southeast Europe

Legislation in Europe

The EU has been the region of the world where the most climate policies have been implemented, and where practical policy experimentation in the field of the environment and climate change has been taking place at a rapid pace over the last twenty-five years. This has led to considerable success in reducing pollution, decoupling emissions from economic growth and fostering global technological leadership. The objective of the book is to explain the EU's climate policies in an accessible way, to demonstrate the step-by-step approach that has been used to develop these policies, and the ways in which they have been tested and further improved in the light of experience. The book shows that there is no single policy instrument that can bring down greenhouse gas emissions, but the challenge has been to put a jigsaw of policy instruments together that is coherent, delivers emissions reductions, and is cost-effective. The book differs from existing books by the fact it covers the EU's emissions trading system, the energy sector and other economic sectors, including their development in the context of international climate policy. Set against the backdrop of the 2015 UN Climate Change conference in Paris, this accessible book will be of great relevance to students, scholars and policy makers alike.

Error Prevention and Well-Being at Work in Western Europe and Russia

The book deals with the main themes in implementing international space law vis-à-vis private enterprise theme by theme, with a specific focus on Europe in view of the complicating roles of ESA and the European Union in this context.

Trends in Forestry Law in Europe and Africa

A variety of psychological traditions and methodological approaches formed a body of human error research in different parts of Europe. This book overviews some of the traditions that have grown in West European countries and Russia, with a strong emphasis on contextual approaches. For the very first time, West European readers will have access to a Russian literature in this area. Western and Eastern psychologists are linked by common psychological roots but disciplines evolved in completely different conditions regarding the material possibilities to collect data, diffuse ideas, and finance research, not to mention the respective political, legal, and socioeconomic frameworks. Authors outline and illustrate the convergence

that emerged between the two traditions. This book is a unique reference text for graduate students and university libraries. Its rich content, and its empirical approaches will also be of interest to those who are undertaking research and practising in the fields of human error, safety, reliability, human factors, industrial hygiene, safety and health at work, and the legal profession.

Legislation in Europe

Exchange of Information Between Member States of the Council of Europe on Legislative Activities in Certain Legal Fields During

The Octopus programme is a technical co-operation programme against corruption and organised crime initiated by the Council of Europe in 1996. This publication contains a number of papers which discuss training and education policies to strengthen efforts to combat corruption within public administration systems in central and eastern European countries, using case studies to consider experiences and best practice examples from the Czech Republic, Kosovo, Latvia, Lithuania, Poland, the Russian Federation, Serbia and Ukraine.

Health Legislation in Europe

This book constitutes the first thorough academic analysis of legislative drafting. By placing the study of legislation and its principles within the paradigm of Flyvberg's phronetic social sciences, it offers a novel approach which breaks the tradition of unimaginative past descriptive reiterations of drafting conventions. Instead of prescribing rules for legislation, it sets out to identify efficacy as the main aim of the actors in the policy, legislative and drafting processes, and effectiveness as the main goal in the drafting of legislation. Through the prism of effectiveness as synonymous with legislative quality, the book explores the stages of the drafting process; guides the reader through structure and sections in their logical sequence, and introduces rules for drafting preliminary, substantive and final provisions. Special provisions, comparative legislative drafting and training for drafters complete this thorough analysis of the drafting of legislation as a tool for regulation. Instead of teaching the reader which drafting rules prevail, the book explores the reasons why drafting rules have come about, thus encouraging readers to understand what goal is served by each rule and how each rule applies. The book is aimed at academics and practitioners who draft or use statutory law in the common or civil law traditions.
