Bred in France to perform the duties of a setter and spaniel, the Brittany is one of the world's most versatile hunting breeds. Beyond the dog's field abilities are his exceptional qualities as a companion dog: handsome, affectionate, industrious, comical, and protective. For a family with children and for the active owner, the Brittany is an ideal choice. Author Richard G. Beauchamp, a world authority on sporting breeds, award-winning writer, and international judge, provides insightful chapters into the breed's development in Europe and the United States and its characteristics as a pet and working dog. New owners will welcome the well-prepared chapter on finding a reputable breeder and selecting a healthy, sound puppy. Chapters on puppy-proofing the home and yard, purchasing the right supplies for the puppy as well as house-training, feeding, and grooming are illustrated with photographs of handsome adults and puppies. In all, there are over 135 full-color photographs in this useful and reliable volume. The author's advice on obedience training will help the reader better mold and train into the most well-mannered dog in the neighborhood. The extensive and lavishly illustrated chapter on healthcare provides up-to-date detailed information on selecting a qualified veterinarian, vaccinations, preventing and dealing with parasites, infectious diseases, and more. Sidebars throughout the text offer helpful hints, covering topics as diverse as historical dogs, breeders, or kennels, toxic plants, first aid, crate training, carsickness, fussy eaters, and parasite control. Fully indexed.

### **Federal Statutes Annotations**

The intense concentration of human activity in urban areas leads to changes in both the quantity and quality of runoff that eventually reaches our streams, lakes, wetlands, estuaries and coasts. The increasing use of impervious surfaces designed to provide smooth and direct pathways for stormwater run-off, has led to greater runoff volumes and flow velocities in urban waterways. Unmanaged, these changes in the quantity and quality of stormwater can result in considerable damage to the environment. Improved environmental performance is needed to ensure that the environmental values and beneficial uses of receiving waters are sustained or enhanced. Urban Stormwater - Best-Practice Environmental Management Guidelines resulted from a collaboration between State government agencies, local government and leading research institutions. The guidelines have

been designed to meet the needs of people involved in the planning, design or management of urban land uses or stormwater drainage systems. They provide guidance in ten key areas: \*Environmental performance objectives \*Stormwater management planning \*Land use planning \*Water sensitive urban design \*Construction site management \*Business surveys \*Education and awareness \*Enforcement \*Structural treatment measures \*Flow management Engineers and planners within local government, along with consultants to the development industry, should find the guidelines especially useful. Government agencies should also find them helpful in assessing the performance of stormwater managers. While developed specifically for application in Victoria, Australia, the information will be of value to stormwater managers everywhere.

The provision of safe food to airline passengers is now a multi-billion dollar industry worldwide. As the aviation industry continues to grow year on year, so do passenger food service expectations, with increasing demand for wider choice and greater quality. Often neglected and under-regulated, food safety should be of paramount importance amid this growth. In this much needed book Erica Sheward makes a compelling case for better management of food safety for all aspects of the aircraft food supply chain.

Endnotes is a journal/book series published by a discussion group based in Germany, the UK and the US. It is primarily oriented towards conceptualising the conditions of possibility of a communist overcoming of the capitalist mode of production--and of the multiple structures of domination which pattern societies characterised by that mode of production--starting from present conditions. As such it has been concerned with debates in communist theory, and particularly the problematic of "communisation"; the question of gender and its abolition; the analysis of contemporary struggles, movements and political economy; the dynamics of surplus population and its effects on capital and class; capitalist formations of "race"; value-form theory and systematic dialectics; the revolutionary failures and impasses of the 20th Century. Endnotes 3 (Gender, Race, Class and Other Misfortunes) includes: The global economic crisis as a 'holding pattern', and the forms of struggle that have responded to it: Occupy, Arab Spring, Movement of Square; The logic of gender; Detailed analysis of UK riots and student struggles; Jasper Bernes on logistics and counter-logistics; Chris Chen on race and the 'limit point of capitalist equality'; and Reworking of key concepts in revolutionary theory: spontaneity, mediation and rupture.

"The Residential Design Codes are a Western Australian institution with a long tradition and a high level of acceptance in local government, industry and the community. The WAPC recognises the value of the R-Codes in their present form while believing that greater diversity in housing, more responsiveness to place and climate and more support for innovation is required. To this end new provisions for housing and planning whether or not as part of the R-Codes will be developed. In the meantime the R-Codes must be kept up-to-date .. This edition of the R-Codes embodies many minor changes and improvements [since ] 2002. From now on the R-Codes will be published in ring-binders new pages will be issued for insertion " - Updating the R-Codes [April 2008 cover sheet]

This book is not just about air travel. It is about the emergent social world of flying. It concerns air space and behavior in the air the way someone else might look at cities and street behavior. Economic, political, and cultural aspects are all considered. . . . Airports have now become specific places in their own right that, in a certain sense, now. . . are very much like cities. Frequent flying also has produced its very own culture. Rules of behavior are subscribed to in the air. Unique behaviors at terminals and in the passenger cabin have emerged that contrast with life on the ground. In chapters below I explore these interesting aspects of etiquette, eroticism, and bi-coastalism, a human activity that is only possible because of our present society's evolution. . . . Only now have we begun to appreciate our emergent global culture. The world is shrinking just as the opportunities for travel expand. -from the Introduction
