Medical Law and Ethics

Concepts and Cases in Nursing Ethics maps the ethical landscape of contemporary nursing. The book is the product of a collaboration between philosopher-ethicist Michael Yeo, nurse-ethicist Anne Moorhouse, and six representatives of various areas of professional nursing. It thus combines philosophical and ethical analysis with nursing knowledge and experience in a manner that is both understandable and relevant. The book is organized around six main concepts in nursing ethics: beneficence, autonomy, confidentiality, truth-telling, justice, and integrity. A chapter is devoted to the elucidation of each of these concepts. In each chapter, historical background and conceptual analysis are supplemented by case studies that exemplify issues and show how the concept applies in nursing practice. In this new edition, the materials in each chapter have been updated to reflect recent developments in nursing and more generally in health care. In addition, a totally new chapter on ethical theory has been added. Complete with bibliographies and study questions for further analysis of cases, this book is ideally suited for textbook use. It will help both practitioners and students to deal better with the clinical problems and issues that are encountered in the field. However, its simple prose and clear exposition of complex issues will make Concepts and Cases in Nursing Ethics attractive to anyone concerned about health care.

Thirty years ago, English jurist Patrick Devlin wrote: "Is it not a pleasant tribute to the medical profession that by and large it has been able to manage its relations with its patients without the aid of lawyers and law makers". Medical interventions at the beginnings and the endings of life have rendered that assessment dated if not defeated. This book picks up some of the most important of those developments and reflects on the legal and social consequences of this metamorphosis over the past ten years, and will be of interest to students of law, sociology and ethics who want a considered and critical introduction to, and reflection on, key issues in these pivotal moments of human life.

Issues in Medical Law and Ethics

What should happen when doctors and parents disagree about what would be best for a child? When should courts become involved? Should life support be stopped against parents' wishes? The case of Charlie Gard, reached global attention in 2017. It led to widespread debate about the ethics of disagreements between doctors and parents, about the place of the law in such disputes, and about the variation in approach between different parts of the world. In this book, medical ethicists Dominic Wilkinson and Julian Savulescu critically examine the ethical questions at the heart of disputes about medical treatment for children. They use the Gard case as a springboard to a wider discussion about the rights of parents, the harms of treatment, and the vital issue of limited resources. They discuss other prominent UK and international cases of disagreement and conflict. From opposite sides of the debate Wilkinson and Savulescu provocatively outline the strongest arguments in favour of and against treatment. They analyse some of the distinctive and challenging features of treatment disputes in the 21st century and argue that disagreement about controversial ethical questions is both inevitable and desirable. They outline a series of lessons from the Gard case and propose a radical new 'dissensus' framework for future cases of disagreement. This new book critically examines the core ethical questions at the heart of disputes about medical treatment for children. The contents review prominent cases of disagreement from the UK and internationally and analyse some of the distinctive and challenging features around treatment disputes in the 21st century. The book proposes a radical new framework for future cases of disagreement around the care of gravely ill people.
