Transitions in Society

Density functional methods form the basis of a diversified and very active area of present days computational atomic, molecular, solid state and even nuclear physics. A large number of computational physicists use these methods merely as a recipe, not reflecting too much upon their logical basis. One also observes, despite of their tremendous success, a certain reservation in their acceptance on the part of the more theoretically oriented researchers in the above mentioned fields. On the other hand, in the seventies (Thomas Fermi theory) and in the eighties (Hohenberg-Kohn theory), density functional concepts became subjects of mathematical physics. In 1994 a number of activities took place to celebrate the thirtieth anniversary of Hohenberg-Kohn-Sham theory. I took this an occasion to give lectures on density functional theory to senior students and postgraduates in the winter term of 1994, particularly focusing on the logical basis of the theory. Preparing these lectures, the impression grew that, although there is a wealth of monographs and reviews in the literature devoted to density functional theory, the focus is nearly always placed upon extending the practical applications of the theory and on the development of improved approximations. The logical foundation of the theory is found somewhat scattered in the existing literature, and is not always satisfactorily presented. This situation led to the idea to prepare a printed version of the lecture notes, which resulted in the present text.

Porsche - Origin of the Species

"Constantin Repin is well dead but Alexander Kuragin lives for you, my angel. I clearly said that you were closing a part of your life and I was opening another. I love you too much to deny you this opportunity. A fresh new start, away from Lintorff and all the others.' Frustrated and disgusted with his life as Lord Consort of one of the most terrifying secret societies known to mankind, a new world opened for artist Guntram de Lisle, away from the man he loved but had hurt him like no one else before. Would he take the opportunity to raise a family on his own? Would Konrad von Lintorff let him go? Would Alexander Kuragin keep his word?"--Page [4] of cover.

With their strong mechanical elements, solid construction and useful performance, few classic British sports cars are quite so practical to own today as the MGAs built from 1955 to 1962. The aim of this book is to show, in words and pictures, how MGAs altered in detail through the course of production, in order to enable owners, enthusiasts and prospective purchasers to identify the parts, finishes and equipment that are correct for their car. Color photography of outstanding specimens shows every permutation of MGA specification in remarkable detail.

The Car Book

Five new plays. *Elegy* (by Jodi Gallagher): Two sisters, unlike, yet sharing a lust for life. When one dies, the other finds herself in a void that can only be created by the loss of a loved one. A tender but frank account of a family tragedy. *So Wet* (by Samantha Bews): Silv, a twenty-something, is a professional woman on the move and determined to make every post a winner -- and that's just her social life. A witty tale of longing, laced with a touch of the erotic. *Like a Metaphor* (by Gabrielle MacDonald): A language journey, in four and a half monologues, through a series of refractions, turning points and tiny visceral moments. A woman's sensual examination of bodily experiences. *Baby X* (by Campion Decent): Georgie and Evelyn are a lesbian couple in search of a sperm donor. A madcap comedy that takes a recipe for family life, throws it in a blender with a generous dollop of queer consciousness, and celebrates the result. *Violet Inc.* (by Pam Leversha): Violet Fahrenheit: brilliant, savage, inspiring -- her spirit radiates the lovers and acolytes who surround her. Thirty years later, they are still struggling to exorcise her legacy. A vibrant journey through social and personal change.

IT'S COMING FOR YOU ONE BLINK AT A TIME It starts as a little white dot - a harmless pinprick of light on the backs of your eyelids. But the longer you keep your eyes closed, the larger it grows until even blinking causes it to increase in size. And that's when you discover that it's not a dot at all. It's alive. It has sharp teeth, snapping jaws, and it's growing at an exponential rate. Keep your eyes open at all times and you'll be safe. Just don't ever sleep. Because it's relentless, it's hungry, and it's coming for you, one blink at a time Blink Dread is a non-stop, page-turning suspense thriller from the mind of Spike Black, author of supernatural horror novels Don't Look Inside and Ghost Ahead.

Karel the Robot

Using the same format that has become so popular in Pascal, Karel the Robot has now become object-oriented. This book is intended to teach novice programmers the fundamentals of object-oriented programming. It accomplishes this goal with an analog equivalent of C++ that allows introductory computer science students to work through a programming project from start to finish. The book opens by explaining the elaborate Robot world that Karel lives in, a world filled with objects. The text continues this strong metaphor throughout. Through the metaphor, students learn the art of solving programming problems in an object-oriented paradigm. This text is suitable for any introductory or second course in computer science where C++ is used.
