Cell Mates

Explores the principles and practical considerations of spatial sound recording and reproduction. Particular emphasis is given to the increasing importance of multichannel surround sound and 3D audio, including binaural approaches, without ignoring conventional stereo. The enhancement of spatial quality is arguably the only remaining hurdle to be overcome in pursuit of high quality sound reproduction. The rise of increasingly sophisticated spatial sound systems presents an enormous challenge to audio engineers, many of whom are confused by the possibilities and unfamiliar with standards, formats, track allocations, monitoring configurations and recording techniques. The author provides a comprehensive study of the current state of the art in spatial audio, concentrating on the most widely used approaches and configurations. Anyone wishing to expand their understanding of these cutting-edge technologies will want to own this book.

This autobiography describes the hours before and after Terry Waite was taken hostage in January 1987 in Beirut. Waite analyzes his thoughts and feelings immediately prior to captivity - what was the nature of his role as envoy for the Archbishop of Canterbury? What was his relationship with the Americans and Colonel Oliver North? The book looks at Waite from his upbringing in Styal, Cheshire, until after his release in November 1991, when he had become one of the best-known figures of his time. It is an account of his years in solitary confinement and of the inner strengths which enabled him to survive.

Jones Telecommunications & Multimedia Encyclopedia

A hands-on introduction to programming with Visual Basic for DOS, including a disk containing all the program code covered. This book takes a painless approach that first-time users will find reassuring--a quick-start, step-by-step tutorial on object-oriented programming; dozens of easy-to-follow sample programs; helpful icons highlighting special tips and warnings; and a rich supply of screen images.

Keene on Chess

A coverage of the Transputer Development System (TDS), an integrated programming environment which facilitates the programming of transputer networks in OCCAM. The book explains transputer architecture and the OCCAM programming model and incorporates a TDS user guide and reference manual.

Transputer Development System

The main links with your PC and the outside world are the centronic port, used for connecting the printer, the RS232 port, used for the mouse, and the games port for a joystick. This book explores how these input/output (I/O) ports can be put to use through a range of other interfacing applications. This is especially useful for laptop and palmtop PCs which cannot be fitted with internal I/O cards. A novel approach is taken by this book, combining the hardware through which the ports can be explored, and the software programming needed to carry out a

range of experiments. Circuits are provided for simple testing tools, and three experimental boards - which can also be purchased ready-made. A huge range of applications are considered, turning the PC into a flexible core of a variety of systems. External devices considered include opto-isolator drivers, power drivers, LED drivers, relay drivers, special driver ICs, and methods of driving opto-isolated zero-crossing solid state relays, stepper motors, sound generating devices and displays. Ways of gathering information from the outside world are given, as well as connection to digital devices, remote control and digital communication. As well as teaching in this field, Pei An has written numerous articles for magazines such as Electronics World and Electronics Today International. A hands-on guide to exploring your PC's input/output ports Covers the hardware and software aspects of interfacing An exciting project-based approach to an important subject area

PC Interfacing

This influential text was fully revised and updated for the second edition with the addition of substantial new material, and takes the reader, in a logical sequence, through the main areas of ergonomics relevant to design, in a way that allows ergonomics to be integrated with all aspects of the design process.

Corporal Punishment of Children in Theoretical Perspective

Spies betray people. That's what we do. It becomes a - a habit. Difficult to break - even when it's not - not strictly necessary. Wormwood Scrubs Prison, London, 1961. One of Britain's most notorious double agents, George Blake, is serving a forty-two year sentence when he strikes up an unlikely friendship with Irish petty criminal, Sean Bourke. Both men are eccentric outsiders. Each sees in each other the possibility of escape and not just from prison. But once on the

outside their mutual dependence faces mounting pressures from MI5, the KGB and indeed from themselves. Simon Gray's absorbing and deftly funny play explores how personal freedom is an illusion and how even friendship must have careful boundaries in a world where deception is a reflex response. *Cell Mates* premiered at the Yvonne Arnaud Theatre, Guildford, in January 1995 before transferring to the Albery Theatre, London. The play was revived at the Hampstead Theatre, London, in November 2017.

The Freshman

The Occupied Royal Palaces Estate is held in trust for the nation and is used to support the official duties of the Sovereign. The Department for Culture, Media and Sport (DCMS) is ultimately responsible for the upkeep of the Estate but in 1991 delegated to the Royal Household the responsibility for running and maintaining the Estate. The Household does so through the Property Services Department and receives grant-in-aid, £15 million in 2007-08, broadly the same level of funding as in 2000-01, which is a reduction of 19 per cent in real terms. This report

examines how the Property Section plans and delivers its maintenance work and the impact the Property Section's running costs and income generated from the Estate had on the funding available to spend on maintenance. The DCMS does not currently have a clear basis for assessing the extent to which its aim of maintaining the Palaces to a standard consistent with their royal, architectural and historic status is being achieved. The Property Section has identified a backlog of maintenance work, but there is not yet an agreement between the parties about how the backlog should be measured or how to manage it. The Property Section has recently strengthened its approach to planning maintenance work and put in place the key elements of a sound maintenance strategy. In 2007-08 the Property Section generated almost £3 million from visitors to Windsor Castle and from renting out accommodation on the estate. The Royal Household's approach to generating income could be strengthened by developing a formal Estate strategy.

The Peninsular Journal Of Medicine And The Collateral Sciences, Volume 5

Despite being commonplace in American households a generation ago, corporal punishment of children has been subjected to criticism and shifting attitudes in recent years. Many school districts have banned it, and many child advocates recommend that parents no longer spank or strike their children. In this book, social theorist Michael Donnelly and family violence expert Murray A. Straus tap the expertise of

social science scholars and researchers who address issues of corporal punishment, a subject that is now characterized as a key issue in child welfare. The contributors discuss corporal punishment, its use, causes, and consequences, drawing on a wide array of comparative, psychological, and sociological theories. Together, they clarify the analytical issues and lay a strong foundation for future research and interdisciplinary collaboration. /DIV
