Applied Pharmacology for the Dental Hygienist

This book will give the dental student a lucid and concise account of the basic principles of pharmacology, made understandable by dentally relevant examples and the practical aspects of drug use in dentistry. It is a new edition of the highly successful Clinical Pharmacology in Dentistry. The title has been changed and the contents restructured to take account of two important recent developments - the greater emphasis on basic science in dentistry teaching, and the increased pressure on dentists to have a wide knowledge of the uses and interactions of drugs.

Pharmacology and Therapeutics for Dentistry - E-Book

The ADA Dental Drug Handbook contains the latest information from dental pharmacology's leading experts. Intended for use by practicing dentists, students, dental educators, it covers the drugs most commonly used in the dental practice, with information about dosage, possible interactions, potential complications and more. This book contains five sections; the main section focuses on drugs used by the dentist, and other sections include pediatric

management, dental office emergencies, handling patients with specific medical conditions, and useful tables. Each chapter starts with a brief overview of the category and contains easy-to-use monographs with sample prescriptions, contraindications, precautions, drug interactions, common side effects, and more. This easy-to-read, spiral bound reference covers drugs used in dentistry, such as analgesics, antibiotics, antifungals, antivirals, anxiolytics, fluorides, local anesthetics and corticosteroids; smoking cessation, salivary management and oral lesion treatments; OTC products with the ADA Seal of Acceptance; ADA Guidelines on procedures such as general anesthesia, antibiotic prophylaxis and medication-related osteonecrosis of the jaw; diabetic events; drug management for pediatrics, emergency situations, and special care patients such as pregnant patients and the elderly.

Treatment Planning in Dentistry - E-Book

Prescribing for children is problematic. Children are not small adults in terms of their physiology, and they cannot be subjects in clinical trials. This makes prescribing for them something of an art and a daunting one at that for trainees. Will Carroll (co-editor of the Illustrated Textbook of Paediatrics amongst other titles for paediatrics trainees) with a team of

fellow paediatricians and a hospital pharmacist have sought to demystify prescribing for children. The team has identified what from their experience are the most common drugs prescribed to children and have addressed each one, adding detail about how each medicine works. Each chapter follows the ABCDE structure covering Absorption, Biological effects, Clearance, Dosing and side Effects in children. This book is a succinct, portable reference, modelled closely on Hitchings et al.: The Top 100 Drugs. Written in conjunction with a hospital pharmacist for drug expertise. User-friendly double-page-spread approach. Each drug entry preceded by clinical pharmacology information with consistent headings: Why and when; Absorption; Biology. Each drug presented in consistent categories: Clearance; Dosing; Administration; Side effects and interactions; Monitoring and Cost.

Essentials of Pharmacology For Dentistry

Practical Procedures in Aesthetic Dentistry

This book provides essential knowledge for creating treatment plans for adult dental patients. Treatment planning strategies are presented to help with balancing the ideal with the practical, with emphasis placed on the central role of the patient — whose needs should drive the treatment planning process. The focus is on planning of treatment, not on the comprehensive details of every treatment modality in dentistry. CD-ROM bound into book presents five cases of varying difficulty with interactive exercises that allow users to plan treatment. What's the Evidence? boxes link clinical decision-making and treatment planning strategies to current research. In Clinical Practice boxes highlight specific clinical situations faced by the general dentist. Review Questions and Suggested Projects, located at the end of each chapter, summarize and reinforce important concepts presented in the book. Key Terms and Glossary highlights the terms that are most important to the reader. Suggested Readings lists included at the end of most chapters provide supplemental resources. Chapter on Treatment Planning for Smokers and Patients with Oral Cancer addresses the dentist's role in managing patients with oral cancer, recognizing oral cancer and differential diagnosis of oral lesions, planning treatment for patients undergoing cancer therapy, and smoking cessation strategies. Chapter on Treatment Planning for the Special Care/Special Needs Patient examines the role of the general dentist in the management of patients with a variety of conditions including physical handicaps, mental handicaps, head trauma, hemophilia, and patients' needs before, during, or after major surgery. Chapter on Treatment Planning for the Alcohol and Substance Abuser discusses the challenges of treating this patient population, as well as how to recognize the problem, delivery of care, scope of treatment, and behavioral/compliance issues. Expanded content on Ethical and Legal Issues in Treatment Planning reflects new accreditation guidelines. Dental Team Focus boxes highlight the relevance of chapter content to the dental team. Ethics Topics boxes emphasize the ethical topics found within each chapter. International Tooth Numbering is listed alongside the U.S. tooth numbers in examples and illustrations.

The top 100 drugs and the five most important intravenous fluids are presented using a clear, consistent layout across double-page spreads. Drugs are arranged alphabetically and also listed by organ system and clinical indication, providing multiple pathways into the information. Clinical pharmacology is discussed under the headings: common indications; mechanisms of action; important adverse effects; warnings; and important interactions. Practical prescribing is discussed under the headings: prescription; administration; communication; monitoring; and cost. A clinical tip is presented for every drug. Single-best-answer questions are provided for self-assessment and to

show how information from several drugs may be integrated.
