## **Corporate Finance**

Islamic Finance has experienced rapid growth in recent years, showing significant innovation and sophistication, and producing a broad range of investment products which are not limited to the complete replication of conventional fixed-income instruments, derivatives and fund structures. Islamic Finance represents an elemental departure from traditional interest-based and speculative practices, relying instead on real economic transactions, such as trade, investment based on profit sharing, and other solidary ways of doing business, and aims to incorporate Islamic principles, such as social justice, ecology and kindness, to create investment products and financial markets which are both ethical and sustainable. Products created according to Islamic principles have shown a low correlation to other market segments and are relatively independent even from market turbulences like the subprime crisis. Therefore, they have become increasingly popular with secular Muslims and non-Muslim investors, as highly useful alternative investments for the diversification of portfolios. In *Islamic Capital Markets: Products and Strategies*, international experts on Islamic Finance and Sharia'a Law focus on the most imminent issues surrounding the evolution of Islamic capital markets and the development of Sharia'a-compliant products. The book is separated into four parts, covering: General concepts and legal issues, including Rahn concepts in Saudi Arabia, the Sharia'a process in product development and the integration of social responsibility in financial communities; Global Islamic capital market trends, such as the evolution of Takaful products and the past, present and future of Islamic derivatives; National and regional experiences, from the world's largest Islamic financial market, Malaysia, to Islamic finance in other countries, including Germany, France and the US; Learning from Islamic finance after the global financial crisis; analysis of the risks and strengths of Islamic capital markets compared to the conventional system, financial engineering from an Islamic perspective, Sharia'a-compliant equity investments and Islamic microfinance. *Islamic Capital Markets: Products and Strategies* is the complete investors' guide to Islamic finance.

The focus of this book is the P versus NP Question and the theory of NP-completeness. It also provides adequate preliminaries regarding computational problems and computational models. The P versus NP Question asks whether or not finding solutions is harder than checking the correctness of solutions. An alternative formulation asks whether or not discovering proofs is harder than verifying their correctness. It is widely believed that the answer to these equivalent formulations is positive, and this is captured by saying that P is different from NP. Although the P versus NP Question remains unresolved, the theory of NP-completeness offers evidence for the intractability of specific problems in NP by showing that they are universal for the entire class. Amazingly enough, NP-complete problems exist, and furthermore hundreds of natural computational problems arising in many different areas of mathematics and science are NP-complete.

Dynamic Business Law: The Essentials is appropriate for the one-semester Business Law course. It contains the basics of business law but does not get bogged down in the kind of details that are more appropriate in an upper-level law class. The text provides an examination of the basic questions, concepts, and legal rules of business law. Emphasis on the BUSINESS in business law. Dynamic Business Law: The Essentials emphasizes the tie of legal issues back to the core business curriculum. This will help both students and faculty. Faculty need to know how this is integrated as they are constantly 'defending' the inclusion of this course in the business curriculum. And students need to understand how the concepts tie to their future business careers. Emphasis on TEACHING. Many professors teaching this course are attorneys first and academics second. They do not have a lot of time to prepare or think about how to apply this information effectively for their business students. Dynamic Business Law: The Essentials contains a helpful instructor's manual, particularly for the many adjuncts teaching this course. Emphasis on CRITICAL THINKING. Neil Browne, one of the co-authors of this text, has written a successful text on critical thinking. His framework is included in Dynamic Business Law: The Essentials as well - to help students learn how to frame and reframe a question/issue. Critical thinking questions are also included at the end of each case, to tie in this component even further.
