This Atlas depicts in a clear manner the use of regional skin, muscle and musculocutaneous flaps as well as donor sites from distant regions of the body where vascularized skin, muscle, bone, and nerves can be harvested and transferred to the head and neck. Otolaryngologists, plastic surgeons and general surgeons use both regional and free flaps to reconstruct damage to the head and neck caused by cancer and trauma. This Atlas provides the surgeon with techniques for mastering different donor sites needed to find solutions to virtually every reconstruction problem. It provides detailed descriptions of the anatomy and harvesting techniques of the major regional and free-flap donor sites currently employed in head and neck reconstruction.

Reconstructive Facial Plastic Surgery

There is a paradigm shift in plastic and reconstructive surgery from the interest of developing new surgical techniques into the application of new technologies via research based studies on stem cells, tissue engineering and new field of reconstructive transplantation such as e.g. face, hand or larynx transplants. This approach is relatively novel and introduced to plastic surgery within past decade. Thus there is an urgent need to facilitate access to this new knowledge which was not traditionally a part of plastic surgery curriculum. The most efficient way of introducing these new approaches is via presentation of pertinent to different fields (stem cell, transplantation, nerve regeneration, tissue engineering) experimental models which can be used as a tool to develop technologies of interest by different groups of surgeons. These surgical specialities which will be interested and benefit from the book include: plastic and reconstructive surgeons, microsurgeons, hand surgeons, orthopaedic surgeons, neurosurgeons and transplant surgeons.

Reconstructive and Plastic Surgery of the External Genitalia

Written by leading psychologists, psychiatrists, and plastic surgeons, this volume provides a thorough understanding of the psychological issues involved in reconstructive and cosmetic surgery. The book examines the relationships among physical appearance, body image, and psychosocial functioning, reviews the literature on the psychological functioning of plastic surgical patients, and offers clinically effective recommendations on psychological assessment and care of specific patient groups. Major sections detail the psychological issues surrounding specific disfigurements and reconstructive procedures and cosmetic surgery of the face and body. These chapters include brief questionnaires for psychological assessment of patients. Concluding chapters discuss bioethical, professional, and legal issues.
