The Economic Studies

Common Property Resources and the Rural Poor in Sub-Saharan Africa

Presents opposing views on a wide variety of issues affecting the world as a whole.

Analysis of Institutional Innovation in the Natural Resources and Environmental Realm

Sociology of Natural Resources

The number of people added to the human race every year is equal to the population of Mexico, and the overwhelming majority of them are born in conditions of growing poverty. In forty years the world's population has doubled, and experts predict it will nearly double again in the next fifty. Meeting the needs of so many people will require a five- to tenfold increase in economic activity, and doubts are growing that the earth can sustain this. Churches, like the human family as a whole, are deeply divided over what to do about it. The author makes a lucid survey of the various "perils" of the population question, and gives an overview of responses already being made by churches and the ecumenical family.

Institutional Economics

This third edition is designed to be of interest to students of environmental and natural resource economics. New chapters, an expanded emphasis on international concerns, domestic topics, and fresh coverage of older topics are covered in an applications-orientated approach.

Abstracts on Rural Development in the Tropics

Based on papers presented at a conference on the economic and environmental aspects of natural resources and population. Issued as a supplement to Population and development review.

Institutional and Legal Aspects of the Environment in Latin America

Since the beginning of the twentieth century, the world's population has increased threefold. Sharply diverging rates of population growth have been accompanied by increasing disparities in income and quality of life across nations. These papers examine the relationship between physical and human resources and population within this context of mass poverty, historically unprecedented population growth, and environmental deterioration. This multidisciplinary analysis, which originated in a study week organized by the Pontifical Academy of Sciences, establishes a reference base that is factual, amply documented, and as scientifically indisputable as possible.

Natural Resources Management Policies, Laws, and Institutional Framework in Malawi

In recent years, global change has become increasingly important in technological, ecological and political spheres. This companion examines the environmental events of recent times, and investigates long-term trends as well as broader issues of global change.

Relations of Institutional Factors to Economic Equilibrium and Long-time Trend

The Role of Institutional Factors in Resource Management: the Case of Botswana

Monthly Bibliography

The discipline of institutional economics has gained increasing prominence in recent years, because standard economic explanations can often not come to grips with major contemporary policy issues, such as economic reform in affluent, but dysfunctional economies, the transformation of the failed socialist command economies and the governance problems of the new industrial economies. Institutional economists point out that rule systems matter greatly to explaining these problems and that institutional innovation is central to finding sustained solutions. Institutions must underpin increasingly complex webs of human interaction because interaction and coordination depend on tenuous links of trust. This major book provides an accessible introduction to the burgeoning discipline of institutional economics, and to the central issues of private property rights and their competitive use. The book develops the issue from fundamental premises about human cognition and motivation. It includes policy-oriented discussions of: * the logical basis of institutions and why institutions matter * the institutional arrangements underpinning domestic markets and international exchange where human action is coordinated by private choice * the institutional arrangements underpinning business organizations * the functions of government and the relative merits of private and public choice, as well as solutions to controlling the opportunistic use of political power * possible reforms in heavily regulated mature economies that have to meet the challenge from new competitors * the reasons for the collapse of the socialist institutional system * the influence of globalization on institutional development during the modernization process in third-world countries This text breaks new ground in that it summarises the contemporary institutional literature in a cohesive manner. The book will not only be welcomed by the student of economics but will also be essential to jurists, business managers, anthropologists, sociologists, political scientists, social historians and moral philosophers.

The Oxford Companion to Global Change

Selected Readings on Economic Growth in Relation to Population Increase, Natural Resources Availability, Environmental Quality Control, and Energy Needs

The Journal of Developing Areas

Indian Economy and the Institutional Set-up

Legal, Regulatory and Institutional Aspects of Environmental and Natural Resources Management in Ghana

Covers teen pregnancy, poverty, unemployment, voting trends, racial segregation, and health care.

Technical and Institutional Change in Renewable Resource Development (with Application for Traditional Fisheries)

Market Institutions, Transaction Costs, and Social Capital in the Ethiopian Grain Market

The Environmental Implications of Population Dynamics

An analysis of how decentralization reforms are changing local institutions for natural resource management in mainland Southeast Asia. The focus is on mountainous areas where impoverished populations struggle to preserve meagre resources, remaining biodiversity and food security.

Institutions and the Control of Natural Resources

Contributed articles presented at the International Conference on "Issues of Population Stabilisation and Development held in the Universe, Bhubaneswar from 8th-10th February, 2002, jointly organized by Council of Cultural Growth and Cultural Relations on population explosion and its reproductive aspects in India.

Environmental and Natural Resource Economics

Population Perils and the Churches' Response

Resources, Environment, and Population

Innovation in natural resource management

Population Pressure and Natural Resource Management

Resources and Population

Taking Sides

The Ethical Foundations of the Market Economy

The globe is now inhabited by 6 billion people, twice as many as in 1960. Understanding the effects this population growth has on the environment will be paramount in developing policies that will mitigate the negative environmental effects. This report discusses the relationship between population and environmental change, the forces that mediate this relationship, and how population dynamics specifically affect climate change and land-use change. The author outlines both sides of the policy debate that have emerged—those who would limit fertility and population growth in the developing world and those who call for reduced consumption in the developed world. She concludes by calling for policymakers to pay increased attention to the role of population and forsake the search for one-step solutions to environmental problems.

The Future of Environmental Institutions in Asia

Population Stabilisation and Development

International agricultural research is expanding beyond the development of annual crop technologies for individual farms to the development of longer-term natural resource management techniques for entire landscapes. But technologies of practices with a long lag time between investment and returns are unlikely to be adopted by farmers unless they have secure rights to the underlying resources (property rights). Similarly, technologies that span multiple farms are unlikely to be adopted unless neighbors and groups work together (collective action). But little is known about the way property rights and collective action in developing countries

mediate the adoption of technologies by farmers and groups. To address this information gap, this volume brings together international experts in economics, sociology, and natural resource management to examine the links among property rights, collective action, and technological change for a variety of technologies across a range of community contexts in the developing world.

Selected Water Resources Abstracts

Legal, Regulatory and Institutional Aspects of Environmental and Natural Resources Management in Malaysia

This publication presents one of the first attempts to integrate two emerging bodies of economic research: institutional economics and organizational theory. It begins within the framework of neoclassical economics, and then extends the boundaries of this framework to offer answers to questions that have so far remained puzzles in neoclassical economics. The integrated approach of this publication also challenges the dominant paradigm in economics over the last 15 years that views the market as the best mechanism for carrying out transactions. The market is not the only transaction mechanism; other modes of organization are also important. However, this way of thinking does not involve a simple reintroduction of the confrontation between the 'government' and the 'market'. On the contrary, the integrated approach tries to open the 'blackbox' of the role of institutions in daily life and the diversity of modes of organization. Through this integrated approach, the book hopes to contribute to a better insight to real world problems. Dr. Louis H.G. Slangen is Associate Professor of Agricultural Economics and Rural Policy at Wageningen University. His teaching, research and supervising MSc and PhD theses are in the field of resource economics, economics of land-use, new institutional economics and economic organisation theory. His publication record consists of about 30 articles in refereed journals, 15 chapters in books, and 10 books. He has a long and extensive experience in various types of research projects for various Dutch Ministries and the European Union. Dr. Laura A. Loucks is Senior Researcher and Lecturer in Institutional Economics and Organization Theory at Wageningen University. Her research focuses on new and emerging institutions for sustainable fisheries management. She has been a consultant to the Canadian Department of Fisheries and Oceans as well as the Dutch Ministry of Agriculture, Nature and Food Quality. Her research on fisheries co-management agreements has been published in several books and in *Marine Policy*, one of the leading journals on marine management issues. Dr. Arjen H.L. Slangen has been Assistant Professor of International Business at the Erasmus University Rotterdam, and is currently Assistant Professor of International Strategy at the University of Amsterdam. His research examines how national institutional environments influence the foreign entry strategies and performance of multinational enterprises. He has published in leading international business and management journals such as the *Journal of International Business Studies* and the *Journal of Management Studies*.
