Alone Together

In this volume, Robert Weisberg demystifies the phenomenon of creativity. Backed with case studies, psychological research findings, and investigations of the work of some of history's most creative personalities (Newton, Edison, Picasso, Mozart, and others), Weisberg demonstrates that creative thinking is an extension of our normal mental capacity--that the roots of 'genius' lie in all of us.

The Monk and the Philosopher

Acclaimed as one of the most exciting books in the history of American letters, this modern epic became an instant bestseller upon publication in 1974, transforming a generation and continuing to inspire millions. This 25th Anniversary Quill Edition features a new introduction by the author; important typographical changes; and a Reader's Guide that includes discussion topics, an interview with the author, and letters and documents detailing how this extraordinary book came to be. A narration of a summer motorcycle trip undertaken by a father and his son, the book becomes a personal and philosophical odyssey into fundamental questions of how to live. The narrator's relationship with his son leads to a powerful self-reckoning; the craft of motorcycle maintenance leads to an austerely beautiful process for reconciling science, religion, and humanism. Resonant with the confusions of existence, *Zen and the Art of Motorcycle Maintenance* is a touching and transcendent book of life.

Teaching Science Through Inquiry-Based Instruction

Lies! Lies!! Lies!!! The Psychology of Deceit looks beyond compulsive liars in our society and considers the ongoing flood of lies that we as human beings experience every day. Who lies? Not just children, politicians, advertisers, and salespeople. Our co-workers lie. Our friends lie. Our relatives lie. And we lie to them. Everybody lies. We learn to lie and to detect deceit as a developmental task. Dr. Ford's philosophy is that lying is part of the bridge between one's internal world (beliefs, perceptions, expectations, fantasies) and one's external world (reality). Lies work not only to deceive others but to deceive ourselves. This book shines a spotlight on an understudied phenomenon that affects us all as we raise children, choose a relationship, move forward with a career path, or buy a used car.

Building Resilience with Appreciative Inquiry

Revised edition of the authors' Psychology, [2014]

Theoretical Schools and Circles in the Twentieth-Century Humanities

Most individual differences in personality, including those that underlie the propensity to rebel, arise within the family. There is a central problem: Why do some scientists, but not others, readily accept radical ideas? Siblings raised together are almost as different in their personalities as people from different families. Sulloway claims that the influence of birth order, like that of gender, can be traced with clear and dramatic consequences. Explores a variety of influences, besides birth order, that affect personality. Considers the role of social influences, especially social attitudes and social class. The family is one of the foremost

engines of change.

Building Resilience with Appreciative Inquiry A Leadership Journey through Hope, Despair, and Forgiveness As a leader, you have work that is complex, full of ups and downs. Your ability to be resilient—to pick yourself up after setbacks and keep on going no matter the challenges—is critical not only to successful leadership but also to fostering teams, generating collaboration, and igniting your organization. In this breakthrough book, veteran consultants Joan McArthur-Blair and Jeanie Cockell show that Appreciative Inquiry can be an invaluable tool to build that resilience. Appreciative Inquiry is a time-tested, highly effective, and widely used change method that emphasizes identifying what's working well in a system and building on those strengths. Originating in the 1980s, it's been responsible for dramatic results in every conceivable type of organization. Using the authors' Appreciative Resilience model, leaders can use AI to increase their ability to weather the storms they'll inevitably face and come out stronger. A profoundly practical guide, this book features first-person accounts from leaders in all kinds of settings and situations describing how they've used AI concepts to increase their resilience, as well as a detailed description of the exercises and practices the authors use in their Appreciative Resilience Workshop. McArthur-Blair and Cockell believe that the core of resilience is the interplay among despair, hope, and forgiveness. Every leader experiences despair in those moments when there is no clear path forward. Maintaining hope that a better future is possible enables leaders to keep going. And forgiveness, of one's own shortcomings and those of others, helps leaders move from despair to hope. AI's focus on the best of what is and using that to generate the future makes it a particularly powerful aid and ally on this journey.

The word Eugenics first appears in this book. Also, in this book, Galton shows mathematically "the results of his experiments on the relations between the powers of visual imagery and of abstract thought".

Jean Francois-Revel, a pillar of French intellectual life in our time, became world famous for his challenges to both Communism and Christianity. Twenty-seven years ago, his son, Matthieu Ricard, gave up a promising career as a scientist to study Tibetan Buddhism -- not as a detached observer but by immersing himself in its practice under the guidance of its greatest living masters. Meeting in an inn overlooking Katmandu, these two profoundly thoughtful men explored the questions that have occupied humankind throughout its history. Does life have meaning? What is consciousness? Is man free? What is the value of scientific and material progress? Why is there suffering, war, and hatred? Their conversation is not merely abstract: they ask each other questions about ethics, rights, and responsibilities, about knowledge and belief, and they discuss frankly the differences in the way each has tried to make sense of his life. Utterly absorbing, inspiring, and accessible, this remarkable dialogue engages East with West, ideas

with life, and science with the humanities, providing wisdom on how to enrich the way we live our lives.

Psychology + Revel

Using lively examples and friendly tips gleaned from his own and other researchers' experiences, and a warm, reflective writing style, Harry F Wolcott offers readers suggestions for writing up qualitative research.

Discovering the Humanities

"Savvy and insightful." --New York Times Technology has become the architect of our intimacies. Online, we fall prey to the illusion of companionship, gathering thousands of Twitter and Facebook friends, and confusing tweets and wall posts with authentic communication. But this relentless connection leads to a deep solitude. MIT professor Sherry Turkle argues that as technology ramps up, our emotional lives ramp down. Based on hundreds of interviews and with a new introduction taking us to the present day, *Alone Together* describes changing, unsettling relationships between friends, lovers, and families.

Sabbath's Theater

Discovering the Humanities helps students see context and make connections across the humanities by tying together the entire cultural experience through a narrative storytelling approach. Pearson Prentice Hall is proud to offer *Discovering the Humanities*-the new brief version of *The Humanities: Culture, Continuity, and Change* adapted by author Henry Sayre himself. *Discovering the Humanities* continues to help students see the big picture and make important connections through Henry Sayre's captivating narrative that has made the comprehensive text successful at schools across the nation. Henry Sayre took the introduction to the humanities course as a sophomore and was inspired to devote his life to the study of the humanities. He has always wanted to write a book that passes along the important and compelling stories of the humanities. Henry believes that students learn best by remembering stories, not by memorizing facts. What makes *Discovering the Humanities* special is that it tells the stories and captures the voices that have shaped and influenced human thinking and creativity.

Schools and circles have been a major force in twentieth-century intellectual movements. They fostered circulation of ideas within and between disciplines, thus altering the shape of intellectual inquiry. This volume offers a new perspective on theoretical schools in the humanities, both as generators of conceptual knowledge and as cultural phenomena. The structuralist, semiotic, phenomenological, and hermeneutical schools and circles have had a deep impact on various disciplines ranging from literary studies to philosophy, historiography, and sociology. The volume focuses on a set of loosely interrelated groups, with a strong literary, linguistic, and semiotic component, but extends to the fields of philosophy and history—the interdisciplinary conjunctions arising from a sense of conceptual kinship. It includes chapters on unstudied or less studied groups, such as Tel Aviv School of poetics and semiotics or the research group Poetics and Hermeneutics. The volume presents a significant supplement to the standard historical accounts of literary, critical, and related theory in the twentieth century. It enhances and complicates our understanding of the twentieth-century intellectual and academic history by showing schools and circles in the state of germination, dialogue, controversy, or decline, in their respective historical and institutional settings, while reaching simultaneously beyond those dense settings to the new cultural and ideological situations of the twenty-first century.

Reproducibility and Replicability in Science

The Art of War (孙子兵法), literally The Laws of War (military methods) by Master Sun is the most famous ancient Chinese treatise, dedicated to a military strategy and policy, written by Sun Tzu. As Sun Tzu said the art of war is of vital importance to the State. The treatise by Sun Tzu influenced crucially on a whole military art of the East. Although it is the first treatise on the military art, it includes clearly expressed common principles of strategy as well as tactics. A special place in a military theoretical literature belongs to comments on Sun Tzu, the earliest of which appeared in the Han era (206-220 AD), and the new ones are still being created Illustrated by D. Fisher.

Converging and diverging views on the mind, the self, consciousness, the unconscious, free will, perception, meditation, and other topics. Buddhism shares with science the task of examining the mind empirically; it has pursued, for two millennia, direct investigation of the mind through penetrating introspection. Neuroscience, on the other hand, relies on third-person knowledge in the form of scientific observation. In this book, Matthieu Ricard, a Buddhist monk trained as a molecular biologist, and Wolf Singer, a distinguished neuroscientist--close friends, continuing an ongoing dialogue--offer their perspectives on the mind, the self, consciousness, the unconscious, free will, epistemology, meditation, and neuroplasticity. Ricard and Singer's wide-ranging conversation stages an enlightening and engaging encounter between Buddhism's wealth of experiential findings and neuroscience's abundance of experimental results. They discuss, among many other things, the difference between rumination and meditation (rumination is the scourge of meditation, but psychotherapy depends on it); the distinction between pure awareness and its contents; the Buddhist idea (or lack of one) of the unconscious and neuroscience's precise criteria for conscious and unconscious processes; and the commonalities between cognitive behavioral therapy and meditation. Their views diverge (Ricard asserts that the third-person approach will never encounter consciousness as a primary experience) and converge (Singer points out that the neuroscientific understanding of perception as reconstruction is very like the Buddhist all-discriminating wisdom) but both keep their vision trained on understanding fundamental aspects of human life.

One of the pathways by which the scientific community confirms the validity of a new scientific discovery is by repeating the research that produced it. When a scientific effort fails to independently confirm the computations or results of a previous study, some fear that it may be a symptom of a lack of rigor in science, while others argue that such an observed inconsistency can be an important precursor to new discovery. Concerns about reproducibility and replicability have been expressed in both scientific and popular media. As these concerns came to light, Congress requested that the National Academies of Sciences, Engineering, and Medicine conduct a study to assess the extent of issues related to reproducibility and replicability and to offer recommendations for improving rigor and transparency in scientific research. Reproducibility and Replicability in Science defines reproducibility and replicability and examines the factors that may lead to non-reproducibility and non-replicability in research. Unlike the typical expectation of reproducibility between two computations, expectations about replicability are more nuanced, and in some cases a lack of replicability can aid the process of scientific discovery. This report provides recommendations to researchers, academic institutions, journals, and funders on steps they can take to improve reproducibility and replicability in science.

Growing out of an International Society of the Study of Behavioral Development-sponsored symposium, this book discusses the basic assumptions that led the

contributors to conduct research in the field of narrative development. This collection gathers their research reflections and varying approaches to narrative and its development. It illustrates each type of approach and highlights their respective motives. The book presents some of the basic motivating assumptions of each approach and provides insight into what holds each set of assumptions together, potentially transforming them into actions. This book will serve as an excellent text for courses emphasizing multiple approaches to the study of narrative. The editor has organized this volume in accordance with the six main points of the symposium: * Specification of the Domain--how narratives are defined in terms of textual structures, knowledge thereof, interactive moves, sociocultural conventions, and the like. * The Individual's Involvement in the Developmental Process--the relationship between some internal or external forces and the organism's own active participation in the developmental process. * The Course of Development--if it is continuous or discontinuous; whether it proceeds in an additive fashion or whether regressive phases occur; and what changes at different points in the developmental process signify. * The Goal of Development--the implicit notion of a telos, a target or end-point that needs to occur in the developmental process. * Mechanisms of Development--the forces and/or conditions that both instigate the developmental process and keep it moving toward its telos. * Methodology--where and how to look in the establishment of a developmental framework. This book is an indispensable text in the fields of narrative and/or discourse, linguistics, language studies, psychology, and education in general.

He is relentlessly defiant. He is exceedingly libidinous. His appetite for the outrageous is insatiable. He is Mickey Sabbath, the aging, raging powerhouse whose savage effrontery and mocking audacity are at the heart of Philip Roth's astonishing new novel. Sabbath's Theater tells Mickey's story in the wake of the death of his mistress, an erotic free spirit whose adulterous daring exceeds even his own. Once a scandalously inventive puppeteer, Mickey is now in his mid-sixties and besieged by ghosts - of his mother, his beloved brother, his vanished first wife, his mistress of thirteen years. Bereft and grieving, he embarks on a turbulent journey back into his past, one that brings him to the brink of madness and extinction. But no matter how ardently he courts death, he is too exuberantly alive to succeed at dying. Sabbath's Theater is a comic creation of epic proportions, and Mickey Sabbath is its gargantuan hero. This book presents Philip Roth at the peak of his powers.
