"Law for Nurses and Midwives, 7th edition gives undergraduate and postgraduate nursing and midwifery students a concise introduction to the law as it pertains health care provision in Australia. As students will already appreciate, nursing and midwifery practice involves making decisions with and for others. This often requires evaluation of best interests and obligations and an assessment of what will best protect or enhance a patient or client's wellbeing. Understanding the application of current legal statutes - particularly those relating to negligence and consent - as they apply to professional practice is therefore essential for all nurses and midwives. Law for Nurses and Midwives, 7th edition provides students with information and knowledge necessary to make well informed and considered decisions - both for themselves and for those under their care. "--Publisher.

How is the task of giving a presentation accomplished? In this insightful book Johanna Rendle-Short unpacks this seemingly simple task to show the complexity that underlies it. Examining the academic presentation as a case in point, she details how seminar presenters interact with the audience and objects around them to produce a coherent whole. Through detailed examination of talk-in-interaction the book throws light on one instance of talk as situated practice, demonstrating both the ordinariness of the academic presentation, and its intricate complexity. While audience members recognize that a seminar is underway, this book shows how this recognition comes about. The Academic Presentation will greatly interest scholars of talk and interaction analysis, situated talk, ethnomethodology and conversation analysis.

Pierre Bernard Milius owes his fame to the Nicolas Baudin expedition of 1800–1804. On 19 October 1800, Baudin and his large group of scientists left Le Havre in two ships, the *Géographe* and the *Naturaliste* to survey the coast of New Holland and the southern part of New Guinea and conduct scientific investigations as well as collect living and preserved specimens of plants and animals. Milius was promoted to commander of the *Géographe* following the death of Baudin. The journal of Pierre Bernard Milius is a rare opportunity to bring to life an important but lesser-known chapter in the history of the discovery and exploration of Australia. Milius first touched land in Australia in Geographe Bay in the south-west, and then in the Swan River district where he took a longboat ashore and was wrecked on

Cottesloe Beach. Here he repaired his boat using local resources such as 'stringy bark for caulking' and resin and gum for sealing the seams. At Cottesloe, Milius noted children's footprints in the sand and shell-fish debris that pointed to the presence of Aboriginal people.
