Looks at the history and revival of religious naturalism, a spiritual path without a supreme being. Previously a forgotten option in religious thinking, religious naturalism is coming back. It seeks to explore and encourage religious ways of responding to the world on a completely naturalistic basis without a supreme being or ground of being. In this book, Jerome A. Stone traces its history and analyzes some of the issues dividing religious naturalists. He includes analysis of nearly fifty distinguished philosophers, theologians, scientists, and figures in art and literature, both living and dead. They range from Ursula Goodenough, Gordon Kaufman, William Dean, Thomas Berry, and Gary Snyder to Jan Christiaan Smuts, William Bernhardt, Gregory Bateson, and Sharon Welch. "...Stone's book offers landscape as

well as portrait, for behind the particular figures in focus there is a wide range of religious naturalisms depicted in clear perspective and considerable depth of field. As theologian Philip Hefner observes in the foreword, Stone is an expert guide and companion to this broader landscape ... Stone's latest book belongs on any current reading list in religious naturalism and would make a fine centerpiece for an academic course or a book group on the subject." — American Journal of Theology and Philosophy "...Stone has pointed toward religious naturalism's connections to and critiques of other types of religious scholarship. He opens possibilities for dialogue with the work of thinkers in many fields, including religious humanism and ecology, along with the ethical questions these fields raise. Stone's work is an excellent introduction to the renewal of religious naturalism that invites the reader to join the discussion." — Religious Studies Review "The strength of Religious Naturalism Today is its descriptions of early religious naturalists." —CHOICE "This is a timely contribution to contemporary theology. I know of no other book that provides such a clear yet nuanced account of the origins, development, and contemporary forms of religious naturalism. Stone's achievement ensures that religious naturalism will again be a major contender in theological debates." — Mary Doak, author of Reclaiming Narrative for Public Theology

It is what it is, they say, but is it? Jed McKenna has always been more about destroying questions than answering them, so it's no surprise that Play is more Q than A. In fact, it might be viewed as a progression through the stages of self-inquiry, each of the seven vignettes taking us a bit further along on the inward journey, the early vignettes asking the questions, and the latter ones looking at those who do ask; showing us, promising us, warning us, where honest and relentless inquiry really lead. But who, Jed has asked, really wants to go where this road really leads? On this journey, who you are changes with every step, and it's all about taking the next step. In the end, Play

is what it is. Or is it? Maybe it's the journey of the examined life, or maybe it's just a playful little play. Ultimately, of course, Play, like life, like anything, is whatever it is to you.

CT imaging has become a mainstay of medical imaging. After 30 years this is a mature technology but the accumulation of innovations over the past decades have given it extraordinary capabilities and new applications continue to emerge. In this book Alex Mamourian uses early CT technology to explain the fundamentals of CT imaging and then builds on that base to explain how innovations such as slip-ring and multidetector arrays allow for rapid, high resolution imaging. This book covers complex applications such as CT cardiac imaging and dual-source dual-energy CT scanning as well as the pitfalls and artifacts that will be encountered in clinical practice. The book also includes chapters on the language of radiation dose and strategies for dose reduction that are essential for optimal CT imaging and patient safety.

The Outstretched Shadow, the first book in The Obsidian Trilogy from Mercedes Lackey and James Mallory Kellen Tavadon, son of the Arch-Mage Lycaelon, thought he knew the way the world worked. His father, leading the wise and benevolent Council of Mages, protected and guided the citizens of the Golden City of the Bells. Young Mages in training--all men, for women were unfit to practice magic--memorized the intricate details of High Magic and aspired to seats on the council. Then he found the forbidden Books of Wild Magic--or did they find him? The three slim volumes woke Kellen to the wide world outside the City's isolating walls. Their Magic was not dead, strangled by rules and regulations. It felt like a living thing, guided by the hearts and minds of those who practiced it and benefited from it. Questioning everything he has known, Kellen discovers too many of the City's dark secrets. Banished, with the Outlaw Hunt on his heels, Kellen invokes Wild Magic--and finds himself running for his life with a unicorn at his side. Kellen's life changes almost faster than he can understand or accept. Rescued by a unicorn, healed by a female Wild Mage who knows more about Kellen than anyone outside the City should, meeting Elven royalty and Elven warriors, and plunged into a world where the magical

beings he has learned about as abstract concepts are flesh and blood creatures-Kellen both revels in and fears his new freedom. Especially once he learns about Demons. He'd always thought they were another abstract concept-a stand-in for ultimate evil. But if centaurs and dryads are real, then Demons surely are as well. And the one thing all the Mages of the City agreed on was that practicing Wild Magic corrupted a Mage. Turned him into a Demon. Would that be Kellen's fate? Deep in Obsidian Mountain, the Demons are waiting. Since their defeat in the last great War, they've been biding their time, sowing the seeds of distrust and discontent between their human and Elven enemies. Very soon now, when the Demons rise to make war, there will be no alliance between High and Wild Magic to stand against them. And all the world will belong to the Endarkened. WELCOME TO THE NEW DEEP SPACE 9 After the destruction of the original space station by a rogue faction of the Typhon Pact, Miles O'Brien and Nog have led the Starfleet Corps of Engineers in designing and constructing a larger, more advanced starbase in the Bajoran system. Now, as familiar faces such as Benjamin Sisko, Kasidy Yates, Ezri Dax, Odo, and Quark arrive at the new station, Captain Ro Laren will host various heads of state at an impressive dedication ceremony. The dignitaries include not only the leaders of allies—such as Klingon Chancellor Martok, Ferengi Grand Nagus Rom, the Cardassian castellan, and the Bajoran first minister—but also those of rival powers, such as the Romulan praetor and the Gorn imperator. But as Ro's crew prepares to open DS9 to the entire Bajor Sector and beyond, disaster looms. A faction has already set in action a shocking plan that, if successful, will shake the Alpha

and Beta Quadrants to the core. And what of Kira Nerys, lost aboard a runabout when the Bajoran wormhole collapsed? In the two years that have passed during construction of the new Deep Space 9, there have been no indications that the Celestial Temple, the Prophets, or Kira have survived. But since Ben Sisko once learned that the wormhole aliens exist nonlinearly in time, what does that mean with respect to their fate, or that of the wormhole . . . or of Kira herself?

These eight stories are linked by a date and a motif. All of them have to do with love. Love and its conditions on the night of March 19, 1929. In his second book and his only collection of stories, Peter Høeg proves himself to be a true storyteller in the tradition of Karen Blixen and Joseph Conrad. These beautifully constructed tales deal with love, the classic arts and sciences, and the confrontation of Western and non-Western cultures. Moving from a railroad car in the Congo to a sailboat in Lisbon's harbor to an upper-class apartment in Copenhagen, they include the tales of a young, disillusioned mathematician who comes face-to-face with his culture's distortion of Africa; an esteemed judge who runs off with the young man he has just sentenced to prison for his homosexual tendencies; and a town--sealed off from the plague--that is infiltrated by a troupe of traveling actors.

She thought she'd have more time. Laurie Notaro figured she had at least a few good years left. But no—it's happened. She has officially lost her marbles. From the kid at the pet-food store checkout line whose coif is so bizarre it makes her seethe "I'm going to kick his hair's ass!" to the hapless Sears customer-service rep on the receiving end of her Campaign of Terror, no one is safe from Laurie's wrath. Her cranky side seems to have eaten the rest

of her-inner-thigh Chub Rub and all. And the results are breathtaking. Her riffs on e-mail spam (“With all of these irresistible offers served up to me on a plate, I WANT A PENIS NOW!!”), eBay (“There should be an eBay wading pool, where you can only bid on Precious Moments figurines and Avon products, that you have to make it through before jumping into the deep end”), and the perils of St. Patrick’s Day (“When I’m driving, the last thing I need is a herd of inebriates darting in and out of traffic like loaded chickens”) are the stuff of legend. And for Laurie, it’s all true. From the Trade Paperback edition.

What statistical evidence shows us about our misguided educational policies Uneducated Guesses challenges everything our policymakers thought they

knew about education and education reform, from how to close the achievement gap in public schools to admission standards for top universities. In this explosive book, Howard Wainer uses statistical evidence to show why some of the most widely held beliefs in education today—and the policies that have resulted—are wrong. He shows why colleges that make the SAT optional for applicants end up with underperforming students and inflated national rankings, and why the push to substitute achievement tests for aptitude tests makes no sense. Wainer challenges the thinking behind the enormous rise of advanced placement courses in high schools, and demonstrates why assessing teachers based on how well their students perform on tests—a central pillar of recent education reforms—is woefully misguided. He explains why college rankings are often lacking in hard evidence, why essay questions on tests disadvantage women, why the most grievous errors in education testing are not made by testing organizations—and much more. No one concerned about seeing our children achieve their full potential can afford to ignore this book. With forceful storytelling, wry insight, and a wealth of real-world examples, *Uneducated Guesses* exposes today's educational policies to the light of empirical evidence, and offers solutions for fairer and more viable future policies.

Choice Recommended Read Leo B. Hendry is one of the foremost developmental psychologists of his

generation. His diverse range of interests have included studies on young people's involvement in competitive sports, investigations into teacher and pupil relations in school, adolescents' leisure pursuits and their family relations, parenting styles, youth workers and mentoring, youth unemployment, adolescent health behaviours, and transition to early adulthood. His research interests now include work on ageing and retirement. *Developmental Transitions across the Lifespan* is the first collection of Hendry's works, and essentially joins the dots to provide an overarching perspective on lifespan development through a dynamic systems theory approach. Underpinned by empirical research, this collection of journal articles and book chapters is linked by a contemporary commentary which not only contextualises each piece within today's research climate, but builds to provides an unorthodox, comprehensive but above all compelling perspective on human development from childhood to old age. Leo B. Hendry's research output has been significant and influential. This is an important book that will provide students and researchers in developmental psychology not only with an opportunity to view his contribution holistically, but in connecting his range of research interests, provides a new contribution to our understanding of lifespan development in its own right.
