Elliot, S. Maria, Household bacteriology

Emotions, Technology, and Digital Games explores the need for people to experience enjoyment, excitement, anxiety, anger, frustration, and many other emotions. The book provides essential information on why it is necessary to have a greater understanding of the power these emotions have on players, and how they affect players during, and after, a game. This book takes this understanding and shows how it can be used in practical ways, including the design of video games for teaching and learning, creating tools to measure social and emotional development of children, determining how empathy-related thought processes affect ethical decision-making, and examining how the fictional world of game play can influence and shape real-life experiences. Details how games affect emotions—both during and after play Describes how we can manage a player’s affective reactions Applies the emotional affect to making games more immersive Examines game-based learning and education Identifies which components of online games support socio-emotional development Discusses the impact of game-based emotions beyond the context of games

For millions of people worldwide, nurses are the difference between life and death, self-sufficiency and dependency, hope and despair. But a lack of understanding of what nurses really do -- one perpetuated by popular media's portrayal of nurses as simplistic archetypes -- has devalued the profession and contributed to a global shortage that constitutes a public health crisis. Today, the thin ranks of the nursing workforce contribute to countless preventable deaths. This fully updated and expanded edition of *Saving Lives* highlights the essential roles nurses play in contemporary health care and how this role is marginalized by contemporary culture. Through engaging prose and examples drawn from television, advertising, and news coverage, the authors detail the media's role in reinforcing stereotypes that fuel the nursing shortage and devalue a highly educated sector of the contemporary workforce. Perhaps most important, the authors provide a wealth of ideas to help reinvigorate the nursing field and correct this

imbalance. As American health care undergoes its greatest overhaul in decades, the practical role of nurses -- that as autonomous, highly skilled practitioners -- has never been more important. Accordingly, *Saving Lives* addresses both the sources of, and prescription for, misperceptions surrounding contemporary nursing.

Elliot Gray

At twenty-seven, Anne Elliot is no longer young and has few romantic prospects. Eight years earlier, she had been persuaded by her friend Lady Russell to break off her engagement to Frederick Wentworth, a handsome naval captain with neither fortune nor rank. What happens when they encounter each other again is movingly told in Jane Austen's last completed novel. Set in the fashionable societies of Lyme Regis and Bath, *Persuasion* is a brilliant satire of vanity and pretension, but, above all, it is a love story tinged with the heartache of missed opportunities.

Virginia Burrus explores one of the strongest and most disturbing aspects of the Christian tradition, its excessive preoccupation with shame. While Christianity has frequently been implicated in the conversion of ancient Mediterranean cultures from shame- to guilt-based, and thus in the emergence of the modern West's emphasis on guilt, Burrus seeks to recuperate the importance of shame for Christian culture. Focusing on late antiquity, she explores a range of fascinating phenomena, from the flamboyant performances of martyrs to the imagined abjection of

Christ, from the self-humiliating disciplines of ascetics to the intimate disclosures of Augustine. Burrus argues that Christianity innovated less by replacing shame with guilt than by embracing shame. Indeed, the ancient Christians sacrificed honor but laid claim to their own shame with great energy, at once intensifying and transforming it. Public spectacles of martyrdom became the most visible means through which vulnerability to shame was converted into a defiant witness of identity; this was also where the sacrificial death of the self exemplified by Christ's crucifixion was most explicitly appropriated by his followers. Shame showed a more private face as well, as Burrus demonstrates. The ambivalent lure of fleshly corruptibility was explored in the theological imaginary of incarnational Christology. It was further embodied in the transgressive disciplines of saints who plumbed the depths of humiliation. Eventually, with the advent of literary and monastic confessional practices, the shame of sin's inexhaustibility made itself heard in the revelations of testimonial discourse. In conversation with an eclectic constellation of theorists, Burrus interweaves her historical argument with theological, psychological, and ethical reflections. She proposes, finally, that early Christian texts may have much to teach us about the secrets of shame that lie at the heart of our capacity for humility, courage, and transformative love.

Reflections Upon a Pamphlet, Entitled, John Elliot's Saving Grace in All Men Proved to be No Grace

Scholars from psychology, neuroscience, economics, animal behavior, and evolution describe the latest research on the causes and consequences of overconsumption. Our drive to consume—our desire for food, clothing, smart phones, and megahomes—evolved from our ancestors' drive to survive. But the psychological and neural processes that originally evolved to guide mammals toward resources that are necessary but scarce may mislead us in modern conditions of material abundance. Such phenomena as obesity, financial bubbles, hoarding, and shopping sprees suggest a mismatch between our instinct to consume and our current environment. This volume brings together research from psychology, neuroscience, economics, marketing, animal behavior, and evolution to explore the causes and consequences of consumption. Contributors consider such topics as how animal food-storing informs human consumption; the downside of evolved “fast and frugal” rules for eating; how future discounting and the draw toward immediate rewards influence food consumption, addiction, and our ability

to save; overconsumption as social display; and the policy implications of consumption science. Taken together, the chapters make the case for an emerging interdisciplinary science of consumption that reflects commonalities across species, domains, and fields of inquiry. By carefully comparing mechanisms that underlie seemingly disparate outcomes, we can achieve a unified understanding of consumption that could benefit both science and society.
