Alternative and Activist New Media provides a rich and accessible overview of the ways in which activists, artists, and citizen groups around the world use new media and information technologies to gain visibility and voice, present alternative or marginal views, share their own DIY information systems and content, and otherwise resist, talk back to, or confront dominant media culture. Today, a lively and contentious cycle of capture, cooptation, and subversion of information, content, and system design marks the relationship between the mainstream ‘center’ and the interactive, participatory ‘edges’ of media culture. Five principal forms of alternative and activist new media projects are introduced, including the characteristics that make them different from more conventional media forms and content. The book traces the historical roots of these projects in alternative media, social movements, and activist art, including analyses of key case studies and links to relevant electronic resources. Alternative and Activist New Media will be a useful addition to any course on new media and society, and essential for readers interested in new media activism.

Hydrothermal Behavior of Fiber- and Nanomaterial-Reinforced Polymer Composites

A New York Times bestseller about a 1950s suburb transformed by the arrival of a divorced mother: “part American Graffiti, part early Updike” (The New York Times). On Hemlock Street, the houses are identical, the lawns tidy, and the families traditional. A perfect slice of suburbia, this Long Island community shows no signs of change as the 1950s draw to a close—until the fateful August morning when Nora Silk arrives. Recently divorced, Nora mows the lawn in slingback pumps and climbs her roof in the middle of the night to clean the gutters. She works three

jobs, and when her casseroles don't turn out, she feeds her two boys—eight-year-old Billy and his baby brother, James—Frosted Flakes for supper. She wears black stretch pants instead of Bermuda shorts, owns twenty-three shades of nail polish, and sings along to Elvis like a schoolgirl. Though Nora is eager to fit in on Hemlock Street, her effect on the neighbors is anything but normal. The wives distrust her, the husbands desire her, and the children think she's a witch. But through Nora's eyes, the neighborhood appears far from perfect. Behind every neatly trimmed hedge and freshly painted shutter is a family struggling to solve its own unique mysteries. Inspired by Nora, the residents of Hemlock Street finally unlock the secrets that will transform their lives forever. A tale of extraordinary discoveries, *Seventh Heaven* is an ode to a single mother's heroic journey and a celebration of the courage it takes to change.

AppleScript in a Nutshell is the first complete reference to AppleScript, the popular programming language that gives both power users and sophisticated enterprise customers the important ability to automate repetitive tasks and customize applications. As the Macintosh continues to expand and solidify its base in the multimedia and publishing industries, AppleScript is the tool of choice on this platform for creating sophisticated time- and money-saving workflow applications (applets). These applets automate the processing and management of digital video, imaging, print, and web-based material. AppleScript is also gaining a foothold in scientific programming, as technical organizations adopt G4 CPU-based systems for advanced computing and scientific analysis. Finally, "power users" and script novices will find that AppleScript is a great everyday Mac programming tool, similar to Perl on Windows NT or Unix. In this well-organized and concise reference, AppleScript programmers will find: Detailed coverage of AppleScript Version 1.4 and beyond on Mac OS 9 and Mac OS X. Complete descriptions of AppleScript language features, such as data types, flow-control statements, functions, object-oriented features (script objects and libraries), and other syntactical elements. Descriptions and hundreds of code samples on programming the various "scriptable" system components, such as the Finder, File Sharing, File Exchange, Network scripting, Web scripting, Apple System Profiler, the ColorSync program, and the numerous powerful language extensions called "osax" or scripting additions. Most other AppleScript books are hopelessly out of date. AppleScript in a Nutshell covers the latest updates and improvements with practical, easy to understand tips, including: Using AppleScript as a tool for distributed computing, an exciting development that Apple Computer calls "program linking over IP." Programmers can now do distributed computing with Macs over TCP/IP networks, including controlling remote applications with AppleScript and calling AppleScript methods on code libraries that are located on other machines. Using the Sherlock find application to automate web and network searching. Insights on scripting new Apple technologies such as Apple Data Detectors, Folder Actions, Keychain Access, and Apple Verifier. AppleScript in a Nutshell is a high-end handbook at a low-end price--an essential desktop reference that puts the full power of this user-friendly programming language into every AppleScript user's hands.

Citizen Kane is arguably the most admired and significant film since the advent of talking pictures. No other film is quite so interesting from both artistic and political points of view. To study it even briefly is to learn a great deal about American history, motion-picture style, and the literary aspects of motion-picture scripts. Rather than presenting a sterile display of critical methodologies, James Naremore has gathered a set of essays that represent the essential writings on the film. It gives the reader a lively set of critical interpretations, together with the necessary production information, historical background, and technical understanding to comprehend the film's larger cultural significance. Selections range from the anecdotal --Peter Bogdanovich's interview with Orson Welles--to the critical, with discussions on the scripts and sound track, and a discussion of what accounts for the film's enduring popularity. Contributors include James Naremore, Peter Bogdanovich, Jonathan Rosenbaum, Robert L. Carringer, François Thomas, Michael Denning, Laura Mulvey, Peter Wollen, and Paul Arthur.
