The New York Times bestselling author of *Better* and *Complications* reveals the surprising power of the ordinary checklist. We live in a world of great and increasing complexity, where even the most expert professionals struggle to master the tasks they face. Longer training, ever more advanced technologies—neither seems to prevent grievous errors. But in a hopeful turn, acclaimed surgeon and writer Atul Gawande finds a remedy in the humblest and simplest of techniques: the checklist. First introduced decades ago by the U.S. Air Force, checklists have enabled pilots to fly aircraft of mind-boggling sophistication. Now innovative checklists are being adopted in hospitals around the world, helping doctors and nurses respond to everything from flu epidemics to avalanches. Even in the immensely complex world of surgery, a simple ninety-second variant has cut the rate of fatalities by more than a third. In riveting stories, Gawande takes us from Austria, where an emergency checklist saved a drowning victim who had spent half an hour underwater, to Michigan, where a cleanliness checklist in intensive care units virtually eliminated a type of deadly hospital infection. He explains how checklists actually work to prompt striking and immediate improvements. And he follows the checklist revolution into fields well beyond medicine, from disaster response to investment banking, skyscraper construction, and businesses of all kinds. An intellectual adventure in which lives are lost and saved and one simple idea makes a tremendous

The International Handbook of Research in Medical Education is a review of current research findings and contemporary issues in health sciences education. The orientation is toward research evidence as a basis for informing policy and practice in education. Although most of the research findings have accrued from the study of medical education, the handbook will be useful to teachers and researchers in all health professions and others concerned with professional education. The handbook comprises 33 chapters organized into six sections: Research Traditions, Learning, The Educational Continuum, Instructional Strategies, Assessment, and Implementing the Curriculum. The research orientation of the handbook will make the book an invaluable resource to researchers and scholars, and should help practitioners to identify research to place their educational decisions on a sound empirical footing.

THE FIELD OF RESEARCH IN MEDICAL EDUCATION The discipline of medical education began in North America more than thirty years ago with the founding of the first office in medical education at Buffalo, New York, by George Miller in the early 1960s. Soon after, large offices were established in medical schools in Chicago (University of Illinois), Los Angeles (University of Southern California) and Lansing (Michigan State University). All these first generation offices mounted master's level programs in medical education, and many of their graduates went on to found offices at other schools.

The U.S. healthcare system is now spending many millions of dollars to improve "patient safety" and "inter-professional practice." Nevertheless, an estimated 100,000 patients still succumb to preventable medical errors or infections every year. How can health care providers reduce the terrible financial and human toll of medical errors and injuries that harm rather than heal? Beyond the Checklist argues that lives could be saved and patient care enhanced by adapting the relevant lessons of aviation safety and teamwork. In response to a series of human-error caused crashes, the airline industry developed the system of job training and information sharing known as Crew Resource Management (CRM). Under the new industry-wide system of CRM, pilots, flight attendants, and ground crews now communicate and cooperate in ways that have greatly reduced the hazards of commercial air travel.

Download File PDF Skills Performance Checklists For Clinical Nursing Skills And Techniques 8e

The coauthors of this book sought out the aviation professionals who made this transformation possible. *Beyond the Checklist* gives us an inside look at CRM training and shows how airline staff interaction that once suffered from the same dysfunction that too often undermines real teamwork in health care today has dramatically improved. Drawing on the experience of doctors, nurses, medical educators, and administrators, this book demonstrates how CRM can be adapted, more widely and effectively, to health care delivery. The authors provide case studies of three institutions that have successfully incorporated CRM-like principles into the fabric of their clinical culture by embracing practices that promote common patient safety knowledge and skills. They infuse this study with their own diverse experience and collaborative spirit: Patrick Mendenhall is a commercial airline pilot who teaches CRM; Suzanne Gordon is a nationally known health care journalist, training consultant, and speaker on issues related to nursing; and Bonnie Blair O'Connor is an ethnographer and medical educator who has spent more than two decades observing medical training and teamwork from the inside.

"This book could easily become the "go to" text for standardized patient utilization and the backbone for implementation strategies in learning programs. It is a must-have for all disciplines interested in adding the human simulation experience to their programs."--Nursing Education Perspectives "Today there is an explosion in the use of simulation in nursing and health professions education. The contributors to this text are experts in this format of teaching. They are the designers of the learning spaces, the authors of simulation cases and evaluation methods, the experts who program the human patient simulators and who teach the patient actors to enact the clinical scenarios. I consider this a "handbook" on the design, evaluation and practice of simulation for clinical education. If you are a faculty member with concerns about how your students will make the transition from student to professional, use simulation in your curriculum and learn for yourself that pretending is simulation for life but simulation is pretending for the delivery of exquisite clinical care." Gloria F. Donnelly, PhD, RN, FAAN Dean and Professor Drexel University College of Nursing and Health Professions Human simulation is changing the face of clinical education in the health professions. Its use has expanded beyond medical school to encompass nursing and mental health clinical education. This comprehensive guide to establishing and managing a human simulation lab has been written by nationally acclaimed simulation experts and is geared for undergraduate, graduate, and professional settings.
