Educational Programs that Work

The classic story about the power of words Donavan Allen doesn't collect coins, comics, or trading cards like most kids. He collects words—big words, little words,

soft words, and silly words. Whenever Donovan finds a new word, he writes it on a slip of paper and puts it in his word jar. But one day, Donovan discovers that his word jar is full. He can't put any new words in without taking some of the old words out—and he wants to keep all his words. Donovan doesn't know what to do, until a visit to his grandma provides him with the perfect solution.

Every teacher wants engaged students. No student wants to be bored. So why isn't every classroom teeming with discussion and activity centred on the day's learning expectations? Engagement by Design gives you a framework for making daily improvements in engaging your students, highlighting opportunities that offer the greatest benefit in the least amount of time. You'll learn how focusing on relationships, clarity, and challenge can make all the difference in forging a real connection with students. Engagement by Design puts you in control of managing

your classroom's success and increasing student learning, one motivated student at a time.

The Skilled Facilitator

What type of questioning invigorates and sustains productive discussions? That's what Jackie Acree Walsh and Beth Dankert Sattes ask as they begin a passionate exploration of questioning as the beating heart of thoughtful discussions. Questioning and discussion are important components of classroom instruction that work in tandem to push learning forward and move students from passive participants to active meaning-makers. Walsh and Sattes argue that the skills students develop through questioning and discussion are critical to academic achievement, career success, and active citizenship in a democratic society. They also have great potential to engage students at the highest levels of thinking and learning. The extent to which this potential is realized, of course, depends on individual teachers who embrace these practices, make them their own, and realize that this process requires a true partnership with students. With that in mind, *Questioning for Classroom Discussion* presents and analyzes the DNA of productive discussions—teacher-guided, small-group, and student-driven.

The framework for teaching is a research-based set of components of instruction that are grounded in a constructivist view of learning and teaching. The framework may be used for many purposes, but its full value is realized as the foundation for professional conversations among practitioners as they seek to enhance their skill in the complex task of teaching. The framework may be used as the foundation of a school's or district's recruitment and hiring, mentoring, coaching, professional

development, and teacher evaluation processes, thus linking all those activities together and helping teachers become more thoughtful practitioners. The actions teachers can take to improve student learning are clearly identified and fall under four domains of teaching responsibility: Planning and Preparation, the School Environment, Instruction, and Professional Responsibilities. Within the domains are 22 components and 76 descriptive elements that further refine our understanding of what teaching is all about. The framework defines four levels of performance--Unsatisfactory, Basic, Proficient, and Distinguished--for each element, providing a valuable tool that all teachers can use. This second edition has been revised and updated and also includes frameworks for school specialists, such as school nurses, counselors, library and media specialists, and instructional coaches. Comprehensive, clear, and applicable to teaching across the K-12 spectrum, the framework for teaching described in this book is based on the PRAXIS III: Classroom Performance Assessment criteria developed by Educational Testing Service and is compatible with INTASC standards.

the same. Major concepts of the Common Core State Standards are included. For example, deep conceptual understanding, the importance of student intellectual engagement, and the precise use of language have always been at the foundation of the Framework for Teaching, but are more clearly articulated in this edition. The language has been tightened to increase ease of use and accuracy in assessment. Many of the enhancements to the Framework are located in the possible examples, rather than in the rubric language or critical attributes for each level of performance.

“Joe Feldman shows us how we can use grading to help students become the leaders of their own learning and lift the veil on how to succeed. . . . With *Grading for Equity*,

Joe Feldman cuts to the core of the conversation, revealing how grading practices that are accurate, bias-resistant, and motivational will improve learning, minimize grade inflation, reduce failure rates, and become a lever for creating stronger teacher-student relationships and more caring classrooms. Essential reading for schoolwide and individual book study or for student advocates, *Grading for Equity* provides a critical historical backdrop, describing how our inherited system of grading was originally set up as a sorting mechanism to provide or deny opportunity, control students, and endorse a “fixed mindset” about students’ academic potential—practices that are still in place a century later. A summary of the research on motivation and equitable teaching and learning, establishing a rock-solid foundation and a “true north” orientation toward equitable grading practices. Specific grading practices that are more equitable, along with teacher examples, strategies to solve common hiccups and concerns, and evidence of effectiveness. Reflection tools for facilitating individual or group engagement and understanding. As Joe writes, “Grading practices are a mirror not just for students, but for us as their teachers.” Each one of us should start by asking, “What do my grading practices say about who I am and what I believe?” Then, let’s make the choice to do things differently . . . with *Grading for Equity* as a dog-eared reference.

Approximately 30 states are now adopting teacher evaluation policies that include student learning objectives (SLOs), which are classroom-specific student test growth targets set by teachers and approved (and scored) by principals. Today state and district leaders are trying to determine the appropriate level of guidance and oversight to provide in support of this work. This study describes results of the pilot implementation of SLOs in two states--Arizona (with 363 teachers) and Utah (with 82 teachers)--that were implementing SLOs with the same aims: to positively affect student achievement and to fulfill the state's required student-accountability component for teacher evaluations. Findings indicated that, in their SLOs, Arizona teachers tended to target student proficiency growth on vendor-developed tests, without including any specifics about instructional strategies, while Utah's pilot teachers (over half of them special education teachers) tended to define their own

SLO-focused instructional strategies and/or use their own classroom-level tests or rubrics, with goals geared toward students demonstrating knowledge (through project completion) or a physical skill. Arizona teachers' end-of-year SLO scores from their principals varied, distinguishing high- and low-performing teachers, and teachers with higher SLO scores were also rated higher on classroom observations and student surveys. Conversely, SLO scores varied little in Utah's pilot, with 89 percent of teachers "meeting expectations." (Utah's pilot teachers were not rated on other measures.) On end-of-year surveys, Utah pilot teachers generally perceived the SLO process as worthwhile and beneficial to their students and to their own professional growth; however, they did not perceive the SLO pilot as positively affecting their instruction or their knowledge of effective ways to assess students. (A low response rate precluded parallel survey analysis in Arizona.) Appended are: (1) Data and methodology; (2) Correlations between Arizona teacher measures, by grade span; and (3) Response frequencies for Utah's pilot teacher survey.

Teacher evaluation systems are being overhauled by states and districts across the United States. And, while intentions are admirable, the result for many new systems is that good often excellent teachers are lost in the process. In the end, students are the losers. In her new book, Linda Darling-Hammond makes a compelling case for a research-based approach to teacher evaluation that supports collaborative models of teacher planning and learning. She outlines the most current research informing evaluation of teaching practice that incorporates evidence of what teachers do and what their students learn. In addition, she examines the harmful consequences of using any single student test as a basis for evaluating individual teachers. Finally, Darling-Hammond offers a vision of teacher evaluation as part of a teaching and learning system that supports continuous improvement, both for individual teachers and for the profession as a whole.
