A Text Book of Engineering Drawing

The Manual of Engineering Drawing has long been the recognised as a guide for practicing and student engineers to producing engineering drawings and annotated 3D models that comply with the latest British and ISO Standards of Technical Product Specifications and Documentation. This new edition has been updated to include the requirements of BS8888 2008 and the relevant ISO Standards, and is ideal for International readership; it includes a guide to the fundamental differences between the ISO and ASME Standards relating to Technical Product Specification and Documentation. Equally applicable to CAD and manual drawing it includes the latest development in 3D annotation and the specification of surface texture. The Duality Principle is introduced as this important concept is still very relevant in the new world of 3D Technical Product Specification. Written by members of BSI and ISO committees and a former college lecturer, the Manual of Engineering Drawing combines up to the minute technical

conics, miscellaneous curves and scales. Three-dimensional drawings, such as projections of points, lines, plane lamina, geometrical solids and their different sections are well-explained in Module C. Module D deals with intersection of surfaces and their developments. Drawing of pictorial views is illustrated in Module E, which includes isometric projection, oblique projection and perspective projections. The fundamentals of machine drawing are covered in Module F. Finally, in Module G, the book introduces computer-aided drafting (CAD) to make the readers familiar with the state-of-the-art techniques of drafting. KEY FEATURES : Follows the International Standard Organization (ISO) code of practice for drawing. Includes a large number of dimensioned illustrations, worked-out examples, and Polytechnic questions and answers to explain the geometrical drawing process. Contains chapter-end exercises to help students develop their drawing skills.

About the Book: In the quest to improve the quality of engineering education, it is not just enough to teach engineering principles and design procedures. An equal emphasis should be stressed to the manufacturing processes and in preparation of production drawings. Keeping this in mind, the contents of the book are planned

and developed. A production drawing is an important document, as the entire production depends on the design of the component, which may include the selection of the process also. The production drawing is a guide not only to the artisan in the shop floor but also to the design engineer-in successful manufacture of a product. Realising the practical importance of production drawings, the subject is nowadays introduced as a full course at both diploma and degree level. The book is the first of its kind incorporating the latest principles of drawings as per BIS, SP-46: 1988. The topics covered include: Limits, fits and tolerances including geometrical tolerances Surface roughness Specification of materials and standard mechanical components Preparation of working drawings for (i) single components, (ii) mating components and (iii) assemblies Process sheets and component manufacture in typical cases Tool drawings Jigs and fixtures Inspection and gauging tool drawings Conventional representation

This book is Designed for the students of Engineering and Technology as well as specially for Mechanical Engineering Degree and Diploma students. The teaching of this course faces difficulty in explaining the various concept of machine drawing viz., orthographical projection, sectioning, complicated mechanical assembly drawing etc. Sometimes explanation requires some three dimensional and complicated drawing to be drawn on the black board which is quite impossible due to the time constraint of class. This book is an outcome of the strong need felt by students offering the course and the teaching need felt by us. The teacher can explain the related concepts, drawing methods and uses of various parts being drawn etc. in each practical class without bothering the black board. The subject matter has been compressed from the view point of Mechanical Engineering
