Learning with technology doesn't happen because a specific tool "revolutionizes" education. It happens when proven teaching strategies intersect with technology tools, and yet it's not uncommon for teachers to use a tool because it's "fun" or because

the developer promises it will help students learn. Learning First, Technology Second offers teachers the professional learning they need to move from arbitrary uses of technology in their classrooms to thoughtful ways of adding value to student learning. This book includes: An introduction to the Triple E Framework that helps teachers engage students in time-on-task learning, enhance learning experiences beyond traditional means and extend learning opportunities to bridge classroom learning with students' everyday lives. Effective strategies for using technology to create authentic learning experiences for their students. Case studies to guide appropriate tech integration. A lesson planning template to show teachers how to effectively frame technology choices and apply them in instruction.

Exterior Ballistics with Applications

Kitty's longing for a quiet life to write her memoirs, but even in the middle of nowhere, she runs into trouble! Kitty Norville's established herself as a DJ, with her midnight talk show Kitty's Midnight Hour, been forced into revealing herself to the nation as a werewolf and testified to the Senate about the supernatural denizens of the USA, but now it's time to lay low in a remote Colorado cabin and work on her memoirs. Her plans get derailed when sexy werewolf hunter Cormac Bennett shows up with her lawyer, Ben O'Farrell, who's been bitten and is about to turn into a werewolf himself. But Kitty's hideaway is neither as peaceful nor as secret as she hopes, for barbed-wire crosses start showing up all over the

place, and, worse, gruesome animal sacrifices are left at her door. Someone wants them gone, and it's up to Kitty and Cormac to find out who's stalking them - before someone gets really hurt

The focus of this book is on speech production and speech processing associated with cleft palate, covering phonetic (perceptual and instrumental), phonological and psycholinguistic perspectives, and including coverage of implications for literacy and education, as well as cross-linguistic differences. It draws together a group of international experts in the fields of cleft lip and palate and speech science to provide an up-to-date and in-depth account of the nature of speech production, and the processes and current evidence base of assessment and intervention for speech associated with cleft palate. The consequences of speech disorders associated with cleft on intelligibility and communicative participation are also covered. This book will provide a solid theoretical foundation and a valuable clinical resource for students of speech-language pathology, for practising speech-language pathologists, and for others interested in speech production in cleft palate, including researchers and members of multi-disciplinary cleft teams who wish to know more about the nature of speech difficulties associated with a cleft palate.

The South Pacific has long been in need of a comprehensive guide to reef and shore fishes. This volume covers the inshore fish fauna of New Caledonia, the Loyalty Islands, the southern Gilbert Islands (Kiribati), Tuvalu, Fiji, the Wallis Islands, Tonga, Samoa, American Samoa, the Tokelau Islands, the Phoenix Islands, the Cook Islands, the Austral

Islands, Rapa, the Society Islands, the Tuamoto Archipelago, the Marquesas Islands, and the Pitcairn Islands. It contains accounts of nearly 1,500 species of fishes, illustrated with more than 2,000 color photographs, taken mostly underwater. (A few drab species are illustrated by only black and white photographs or drawings.) Species accounts are headed by the English common name, the scientific name, the author or authors who described the fish, and the date of the description. This is followed by a concise list of the characteristics needed to identify the species, the total length it attains, its distribution, habitat, and in summary form what may be known of its biology. More than 600 references are given for those seeking more information on individual species. The introduction contains a two-page color spread of the main external features of fishes. An extensive glossary of scientific terms precedes the index.

Kitty Takes a Holiday

This book highlights the state of the field in the new, provocative line of research into the cognition and

behavior of the domestic dog. Eleven chapters from leading researchers describe innovative methods from comparative psychology, ethology and behavioral biology, which are combined to create a more comprehensive picture of the behavior of *Canis familiaris* than ever before. Each of the book's three parts highlights one of the perspectives relevant to providing a full understanding of the dog. Part I covers the perceptual abilities of dogs and the effect of interbreeding. Part II includes observational and experimental results from studies of social cognition – such as learning and social referencing – and physical cognition in canids, while Part III summarizes the work in the field to date, reviewing various conceptual and methodological approaches and testing anthropomorphisms with regard to dogs. The final chapter discusses the practical application of behavioral and cognitive results to promote animal welfare. This volume reflects a modern shift in science toward considering and studying domestic dogs for their own sake, not only insofar as they reflect back on human beings.

Cleft Palate and Craniofacial Anomalies: Effects on Speech and Resonance is the only book of its kind that covers both oral and facial anomalies and cleft palate. Designed as a how-to guide for the practicing clinician, this book emphasizes what students, clinicians new to this population, and any member of a cleft palate team need to know in the workplace. It includes information on common craniofacial anomalies, associated anomalies, and genetic syndromes. Everything from basic information on anatomy, physiology, and embryology of the face and oral cavity to oral, dental, and ENT anomalies and their effects on speech, resonance, and feeding are covered. The evaluation section includes the perceptual evaluation of speech and resonance, the intraoral examination, and instrumental assessment procedures. The treatment section includes surgical

procedures, prosthetic devices, and therapies designed to address speech, resonance, and velopharyngeal dysfunction. The need for multidisciplinary team assessment and treatment is also emphasized throughout. Cleft Palate & Craniofacial Anomalies: Effects on Speech and Resonance

Exterior Ballistics with Applications – Skydiving, Parachute Fall, Flying Fragments presents a modern approach to introduce the basics of exterior ballistics and its methods from the simple ideal model of projectile motion to the automatic solution of the differential equations of projectile flight using PC programs. The book uses different approaches to solve the differential equations of projectile motion — among them the Siacci method and the numerical methods. The results obtained through the integration of differential equations of projectile flight are mostly analytical formulas that describe the projectile trajectory and make the exterior ballistics a comprehensible science. The Differential Equations of Projectile Flight are also integrated numerically using some original PC programs that can be easily modified to be used in similar scenarios or other new ones and give the reader the possibility to solve a great variety of Exterior Ballistics problem. Exterior Ballistics with Applications can be considered as an interdisciplinary applied mathematics and physics manuscript for the vast mathematics and physics models and techniques employed. It is a great source for applications in physics, calculus, differential equations, numerical methods, and PC programming as well. The book is illustrated with about 140 solved examples related to different artillery and infantry firearms that demonstrate the use of formulas and the solution methods of ballistics to find the elements of projectile trajectories. Exterior Ballistics with Applications includes as well two interesting topics that can be considered as applications of exterior ballistics: 1. Skydiving and parachute falling related with the trajectory of a parachutist launched from a

horizontally flying airplane with un-deployed parachute, in different meteorological conditions, and in presence of air resistance and wind. 2. The ballistics of projectile fragments that is an important element of Terminal Ballistics necessary to study the effectiveness of fragmentation ammunitions on the personnel and objects, and other problems related with the construction of fragmentation ammunitions, or with Forensic Sciences. Exterior Ballistics with Applications is comprehensive and serves as reference material to provide answers to problems encountered in the practice of motion of unguided projectiles, skydiving and flying fragments of antipersonnel ammunitions.

Learning First, Technology Second

The men were huddled in lifeboats. Some prayed that their legs would work. Some smiled to show they weren't scared. They peered into the darkness ahead and saw nothing. Then, the dark shape of a man standing on a hill. A shout from the shore. A single shot rang out and a bullet hissed overhead. The Gallipoli campaign had begun. Anzac soldiers fought on Turkish soil a century ago. So why do we still care about what happened there? Why do we celebrate a battle lost? The Gallipoli Story takes young people on an unforgettable and tough journey deep into the heartland of war. Patrick Carlyon digs past the myths to explore the lives and choices of the men -- soldiers, politicians and generals alike -- who found themselves caught up in a battle fought far from home. A powerful piece of storytelling that brings history to life

-- and shows us the human faces behind the grand story. The CBC Honour Book.

Fitness Made Simple

How did Alan Mulally--an outsider to the auto industry--lead such a spectacular turnaround at Ford? How did Morgan Stanley CEO John Mack keep his company from imploding even as Lehman Brothers collapsed? What is it that enables such extraordinary leaders to galvanize their talents and energy, as well as the talents and energy of those who work for them, to achieve superior performance no matter what challenges they face? Rajeev Peshawaria has spent more than twenty years working alongside top executives at Fortune 500 companies and training them in leadership, including as Global Director of Leadership Development programs at American

Express, as Chief Learning Officer at both Morgan Stanley and Coca-Cola, and as one of the founding members of the renowned Goldman Sachs leadership development program known as Pine Street. He knows precisely what makes the difference between those who are simply bosses and those who are superior leaders, and between those who continue to rise to the top levels and those who get stuck along the way. In this lively and remarkably empowering book, Peshawaria offers readers the opportunity to experience the highest level of leadership training available in the world. Introducing the three core principles he has observed are the foundation of the best leadership--that great leaders clearly define their purpose and values; that nobody can motivate another person because everyone comes pre-motivated; and that a leader's job is not to directly produce results but to create the conditions that will harness the energy of others—he details his unique and proven program for achieving leadership excellence. Sharing a wealth of illuminating stories, from those of Mulally's achievement at Ford and Mack's at Morgan Stanley, to how Harvey Golub and Ken Chenault successfully restored American Express to long-term sustainable growth, how Neville Isdell turned the Coca-Cola Company around, and the continuing prowess of Jeff Bezos in growing Amazon.com, he first reveals how extraordinary leaders marshal and sustain the level of energy in themselves that is required and how they enlist a core group of proficient co-leaders. He then outlines how to harness the energy and talents of those at all levels of an organization, igniting their motivation by following his RED guidelines for addressing their core needs

concerning their Role, their work Environment, and their career Development. Finally, he introduces his unique Brains, Bones, and Nerves framework for: developing a clear strategy for competitive advantage (the Brains); crafting an optimal organizational structure (the Bones); and fostering a highly cooperative and motivated company culture (the Nerves). Filled with specific tips about the vital questions to ask and simple but powerful steps to follow, *Too Many Bosses, Too Few Leaders* is a manager's essential tool kit for long-term superior performance.

The Orgone Accumulator Handbook

The Spy who Loved Me

In *A Philosophy of Technology: From Technical Artefacts to Sociotechnical Systems*, technology is analysed from a series of different perspectives. The analysis starts by focussing on the most tangible products of technology, called technical artefacts, and then builds step-wise towards considering those artefacts within their context of use, and ultimately as embedded in encompassing sociotechnical systems that also include humans as operators and social rules like legislation. Philosophical characterisations are given of technical artefacts, their context of use and of sociotechnical systems. Analyses are presented of how technical artefacts are designed in engineering and what types of technological knowledge is involved in engineering. And the issue is considered

how engineers and others can or cannot influence the development of technology. These characterisations are complemented by ethical analyses of the moral status of technical artefacts and the possibilities and impossibilities for engineers to influence this status when designing artefacts and the sociotechnical systems in which artefacts are embedded. The running example in the book is aviation, where aeroplanes are examples of technical artefacts and the world aviation system is an example of a sociotechnical system. Issues related to the design of quiet aeroplane engines and the causes of aviation accidents are analysed for illustrating the moral status of designing, and the role of engineers therein.

Body Freedom is the latest chapter in Karl Lagerfeld's ongoing photographic exploration of model Baptiste Giabiconi. Lagerfeld's first portrait of Giabiconi in book form, *The Beauty of Violence* (2010), showed Giabiconi acting out an erotic seizure in a studio and toyed with the idea of nudity. *Body Freedom* liberates Giabiconi from the studio environment and tackles nudity full on: with enviable self-confidence and no shame, the nude Giabiconi plays before Lagerfeld's lens. *Body Freedom* comprises two folio-size books in a slipcase, each embodying a different episode in Giabiconi's development. The first shows him in the ruins of the Villa Adriana in Tivoli in 2008 (the 'antique'); while the second presents more recent images of Giabiconi in contemporary architectural settings (the 'modern'). Containing images taken over three years, *Body Freedom* is an exercise in the passing of time as seen through the male form, the transition from adolescence into manhood.
