This volume contains more than sixty of Pyle's best works.

Digital Cinematography

Cell Death Regulation in Health and Disease - Part A, Volume 351, the latest release in the International Review of Cell and Molecular Biology reviews current advances in cell and molecular biology. The series publishes timely topics authored by prominent cell and molecular biologists. This release is part of a 3-part series which comprises a comprehensive view of cell death regulation in a variety of biological contexts. Chapters cover Membrane dynamics in cell death regulation, The role of necroptosis in intestinal dysfunction, Regulation of cell death in the cardiovascular system, Cell death in bacterial and viral infection, and much more. Provides a comprehensive collection of front-of-the line research in the field of cell death regulation Authored by established and active cell and molecular biologists and drawn from international sources Includes invited review articles that cover selected topics in multiple organisms and disease settings

Murderous Maths: All Shapes and Sizes

Cooking a wide variety of Japanese meals doesn't have to require a lot of effort, multiple cookbooks, and guesswork. Here's the key to making delicious Japanese food at home tonight. People love Japanese cuisine, but very few prepare it themselves. Japanese Cooking Made Simple provides the basic techniques and recipes that unlock your ability to prepare delicious, authentic Japanese meals to enjoy with friends and family at home - without requiring significant investments in time and money to do so. Japanese Cooking Made Simple contains more than 100 easy-to-follow authentic Japanese recipes with ingredients you can find in your local grocery store. Sushi and bento boxes will become part of your weeknight meals, as will Ramen with Braised Pork Belly, Tempura Soba, Fried Tofu in Broth, California Rolls, Pan-Broiled Salmon with Scallions, Chicken Yakitori, and Green Tea Ice Cream. Step-by-step instructions and illustrations will have you preparing sushi, including norimaki and temaki, with ease. Color photos help you put a beautiful Japanese dish on the plate. In Japanese Cooking Made Simple, Salinas Press has once again created a cookbook that provides home chefs not only with a wide variety of delicious recipes to choose from, but also the simple tools to make it easy.

Occupational Therapy for Older People

This book focuses on evidence-based occupational therapy in the care of older adults in different clinical settings, from home to acute hospital, from intensive care unit to rehabilitation centers and nursing homes. Occupational therapy has progressively developed as a new discipline aiming to improve the daily life of individuals of different ages, from children to older adults. The book first reviews the interaction between occupational therapy and geriatrics and then discusses in depth how occupational therapy interventions are applied in the community, in the acute hospital and in the nursing home. It highlights the key role of occupational therapy in the management of frail patients, including critically ill older patients and persons with dementia, and describes in detail how to maintain occupational therapy interventions across different settings to avoid the fragmentation of care. The ageing population requires new innovative approaches to improve the quality of life, and as such this book provides clinicians with handy, key information on how to implement occupational therapy in the daily clinical care of older adults based on the current scientific evidence.

The Lacan Tradition

This new text presents calculus with solid mathematical precision but with an everyday sensibility that puts the main concepts in clear terms. It is rigorous without being inaccessible and clear without being too informal--it has the perfect balance for instructors and their students.

Beyond Exonerating the Innocent: Author on WAMU Radio Convicted Yet Innocent: The Legal Times Review Choice Outstanding Academic Title for 2008 DNA testing and advances in forensic science have shaken the foundations of the U.S. criminal justice system. One of the most visible results is the exoneration of inmates who were wrongly convicted and incarcerated, many of them sentenced to death for crimes they did not commit. This has caused a quandary for many states: how can claims of innocence be properly investigated and how can innocent inmates be reliably distinguished from the guilty? In answer, some states have created “innocence commissions” to establish policies and provide legal assistance to the improperly imprisoned. The Innocence Commission describes the creation and first years of the Innocence Commission for Virginia (ICVA), the second innocence commission in the nation and the first to conduct a systematic inquiry into all cases of wrongful conviction. Written by Jon B. Gould, the Chair of the ICVA, who is a professor of justice studies and an attorney, the author focuses on twelve wrongful conviction cases to show how and why wrongful convictions occur, what steps legal and state advocates took to investigate the convictions, how these prisoners were ultimately freed, and what lessons can be learned from their experiences. Gould recounts how a small band of attorneys and other advocates — in Virginia and around the country — have fought wrongful convictions in court, advanced the subject of wrongful convictions in the media, and sought to remedy the issue of wrongful convictions in the political arena. He makes a strong case for the need for Innocence Commissions in every state, showing that not only do Innocence Commissions help to identify weaknesses in the criminal justice system and offer workable improvements, but also protect society by helping to ensure that actual perpetrators are expeditiously identified, arrested, and brought to trial. Everyone has an interest in preventing wrongful convictions, from police officers and prosecutors, who seek the latest and best investigative techniques, to taxpayers, who want an efficient criminal justice system, to suspects who are erroneously pursued and sometimes convicted. Free of legal jargon and written for a general audience, The Innocence Commission is instructive, informative, and highly compelling reading.

The Arab Influence in Medieval Europe

Mathematics of Complexity and Dynamical Systems is an authoritative reference to the basic tools and concepts of complexity, systems theory, and dynamical systems from the perspective of pure and applied mathematics. Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self-organization, e.g. the spontaneous formation of temporal, spatial or functional structures. These systems are often characterized by extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic. The more than 100 entries in this wide-ranging, single source work provide a comprehensive explication of the theory and applications of mathematical complexity, covering ergodic theory, fractals and multifractals, dynamical systems, perturbation theory, solitons, systems and control theory, and related topics.

Mathematics of Complexity and Dynamical Systems is an essential reference for all those interested in mathematical complexity, from undergraduate and graduate students up through professional researchers.

The Lacanian Tradition is unique among psychoanalytic schools in its influence upon academic fields such as literature, philosophy, cultural and critical studies. This book aims to make Lacan's ideas accessible and relevant also to mainstream psychoanalysts, and to showcase developments in Lacanian thinking since his death in 1981. The volume highlights the clinical usefulness of such concepts as the paternal metaphor, the formula of fantasy, psychic structure, the central role of desire and the interlinking of the individual subject in the matrix of the Other. While these themes are woven through all the papers, each is a highly individual reflection upon some aspect of Lacanian theory, practice or history. Bernard Burgoyne's close study of the sources of Lacan's academic inspirations clarifies many of his ideas; Sara Flanders' remarkable overview of the field of French psychoanalysis situates Lacan firmly at its centre; while Lionel Bailly's exposition of Lacan's version of the Oedipus Complex reclaims a currently fashionable area of psychoanalysis for the man who alone in the 1950s made the case for the necessity of the tripartite structure of object-relations in the psyche. Berges and Balbo's work shows Lacanian thinking presaging recent evidence-based ideas of how mother-baby interactions bring into being the ability to mentalise and the development of subjectivity itself. Nobus' paper encapsulates the trajectory and aim of a Lacanian analysis. These pages will, the editors hope, open the reader's

eyes to the fertility and importance of the Lacan tradition and bring it closer into the fold of psychoanalytic thought.

Microscopic X-ray Fluorescence Analysis Edited by Koen H. A. Janssens, Freddy C. V. Adams Department of Chemistry, University of Antwerp, Belgium and Anders Rindby Department of Physics, Chalmers University of Technology, Göteborg, Sweden In the last 10-15 years many analytical advances in X-ray fluorescence analysis (XRF) have taken place, giving rise to non-destructive ultrasensitive surface analyses of materials. One of the variants of XRF developed is micro-XRF (μ -XRF), which is able to analyse the distribution of major, minor and trace elements in microscopic sample surface areas. Due to the availability of commercial instrumentation and the development of simple devices for focusing X-rays, μ -XRF has increased in popularity and is able to fill the gap between bulk X-ray fluorescence and electron probe X-ray microanalysis (EPXMA). Microscopic X-ray Fluorescence Analysis is the first single volume to bring together introductory and advanced information on the essential aspects of the technique, thereby providing an excellent overview of the developments and applications of μ -XRF. Topics discussed in the book include: * Interaction of X-rays with matter * Micro-focusing X-ray optics * Instrumentation for μ -XRF with laboratory and synchrotron sources * Evaluation and calibration of μ -XRF data * Comparison of μ -XRF to other microanalytical techniques. In addition, the final chapters of the book describe applications of μ -XRF in the geosciences, in art and archaeology, environmental and biological applications, and the use of μ -XRF for industrial purposes. Finally an overview is presented of some of the new directions both laboratory and synchrotron μ -XRF are likely to take in the 21st Century.
