Questioning for Classroom Discussion

From Involvement to Engagement in Online Communication

"This book investigates how those involved in education can respond to the opportunities offered by the Web 2.0 technology"--Provided by publisher.

Learning Language and Culture Via Public Internet Discussion Forums

Linguistics

Proceedings of the annual DigitalStream conferences held at California State University-Monterey Bay, in March 15-17, 2001 and March 21-23, 2002.

Computer-Assisted Language Learning: Concepts, Methodologies, Tools, and Applications

Redefining Tandem Language and Culture Learning in Higher Education

The Routledge Encyclopedia of Language Teaching and Learning is an authoritative reference dealing with all aspects of this increasingly important field of study. Offering a comprehensive range of articles on contemporary language teaching and its history, it has been produced specifically for language teaching professionals and as a reference work for academic studies at postgraduate level. In this new edition, every single entry has been reviewed and updated with reference to new developments and publications. Coverage has been expanded to reflect new technological, global and academic developments, with particular attention to areas such as online and distance learning, teacher and learner cognition, testing, assessment and evaluation, global English and teacher education. Themes and disciplines covered include: Methods and materials, including new technologies and materials development Contexts and concepts, such as mediation, risk-taking in language learning and intercomprehension Influential figures from the early days of language teaching to the contemporary Related disciplines, such as psychology, anthropology and corpus linguistics? It covers the teaching of specific languages, including Japanese, Chinese, Arabic and African languages, as well as English, French, German and Spanish. There are thirty five overview articles dealing with issues such as communicative language teaching, early language learning, teacher education and syllabus and curriculum design. A further 160 entries focus on topics such as bilingualism, language laboratories and study abroad. Numerous shorter items examine language and cultural institutions, professional associations and acronyms. Multiple cross-references enable the user to browse from one entry to another, and there are suggestions for further reading. Written by an international team of specialists, the Routledge Encyclopedia of Language Teaching and Learning is an invaluable resource and reference manual for anyone with a professional or academic interest in the subject.

Teaching and Researching: Autonomy in Language Learning

"This book offers readers an authoritative reference to the current progress of Chinese language and cultural e-learning"--Provided by publisher.

Routledge Encyclopedia of Language Teaching and Learning

As propriedades do mundo digital não só vão demandar ainda muitas investigações como criam, para os usuários, novas práticas de linguagem e novos letramentos que apenas começam a ser estudados. Como interagimos num chat? Que estilos podemos adotar nos emails? Como se organiza o internetês? Como lemos e navegamos por hipertextos? Que novos procedimentos de escrita as ferramentas computacionais viabilizam? Como se produz um infográfico? Nesse sentido, estudar as práticas de linguagem e os letramentos em ambiente digital é crucial para o ensino de línguas e linguagens na contemporaneidade e terá impacto de médio prazo nas práticas didáticas. Um livro como este, que reúne pesquisadores brasileiros renomados, tanto no campo das teorias de gêneros

como no de ensino de línguas, escrevendo sobre todas estas questões - e ainda sobre muitas outras - de maneira simples e acessível ao leigo e especialmente direcionada aos professores de línguas, é uma grande contribuição para a compreensão desses fenômenos e para a incorporação dessa nova realidade ao ensino.

Tandem Learning on the Internet

Provides comprehensive coverage of successful translation of language learning designs utilizing ICT in practical learning contexts. Offers the latest knowledge related to research on computer-enhanced language acquisition and learning.

Language and the Internet

What type of questioning invigorates and sustains productive discussions? That's what Jackie Acree Walsh and Beth Dankert Sattes ask as they begin a passionate exploration of questioning as the beating heart of thoughtful discussions.

Questioning and discussion are important components of classroom instruction that work in tandem to push learning forward and move students from passive participants to active meaning-makers. Walsh and Sattes argue that the skills students develop through questioning and discussion are critical to academic achievement, career success, and active citizenship in a democratic society. They also have great potential to engage students at the highest levels of thinking and learning. The extent to which this potential is realized, of course, depends on individual teachers who embrace these practices, make them their own, and realize that this process requires a true partnership with students. With that in mind, *Questioning for Classroom Discussion* presents and analyzes the DNA of productive discussions—teacher-guided, small-group, and student-driven.

Annual Report on English and American Studies

'Autonomous language learning in tandem offers an account of the largest-ever European initiative in the development of autonomous learning. At the conclusion of the project, students from more than 20 countries were working as partners, either face-to-face or on the Internet, to develop their own - and each other's - language skills. Other benefits for learners included heightened intercultural awareness and an enhanced ability to manage their own learning.' -- cover.

Language Learning Strategies in Independent Settings

This book constitutes the refereed proceedings of the First International Conference on Web-Based Learning, ICWL 2002, held in Hong Kong, China in August 2002. The 34 revised full papers presented together with an invited keynote paper were carefully reviewed and selected from 75 submissions. The papers are organized in topical sections on system modeling and architectures, distance learning systems engineering, collaborative systems, experiences in distance learning, databases and data mining, and multimedia.

Handbook of Research on Web 2.0 and Second Language

Learning

"This book investigates how those involved in education can respond to the opportunities offered by the Web 2.0 technology"--Provided by publisher.

Emerging Technologies in Teaching Languages and Cultures

Handbook of Research on Computer-Enhanced Language Acquisition and Learning

This collection of research in on-line communication for second language learning includes use of electronic mail, real-time writing and the World Wide Web. It analyses the theories underlying computer-assisted learning.

Effective Learning and Teaching in Modern Languages

Online Communication in a Second Language

Effective Learning and Teaching in Modern Languages offers insights from the latest research into learning and teaching a language, and also outlines innovative teaching techniques, covering all the critical subjects including: the demands made of students and staff in modern languages the four language skills assessment, grammar, vocabulary and translation technology-enhanced learning residence abroad subdisciplines such as business, area, cultural and literary studies, and linguistics professional development. Providing both a clear overview of the discipline and a wealth of techniques, practical advice and useful resources, this book will be welcomed by lecturers or tutors new to the profession and experienced lecturers wanting to keep up with the latest developments and improve their students' learning.

Learning Culture and Language through ICTs: Methods for Enhanced Instruction

Redefining Tandem Language and Culture Learning in Higher Education provides an overview of a specific type of learning, called tandem language and culture learning, which was created and developed in Europe after the Second World War, before reaching other continents. Through focusing on higher education, the authors demonstrate how, despite institutional constraints, language educators can make better use of this practice in such contexts as internationalisation, physical and virtual mobility, lifelong learning and intercultural education. This book comprises 16 chapters which examine how tandem language and culture learning is currently being institutionalised in higher education thus showing how the founding principles of the tandem approach have been revisited, which learning outcomes (intercultural, linguistic, professional) tandem learning may bring about, and which key issues must be addressed (assessment, counselling, resources) when setting up tandem programmes. The various contributions present up-to-date tandem studies from both European and non-European

perspectives. Highlighting tandem learning's potential to promote multilingual and multicultural learning on a global scale, this volume will be of particular interest to students and researchers in intercultural communication, language education, multilingualism, and applied linguistics.

Advances in Web-Based Learning

This book constitutes the refereed proceedings of the 8th International Workshop on Learning Technology for Education Challenges, LTEC 2019, held in Zamora, Spain, in July 2019. The 41 revised full papers presented were carefully reviewed and selected from 83 submissions. The papers are organized in the following topical sections: learning technologies; learning tools and environment; e-learning and MOOCs; learning practices; social media learning tools; machine learning and evaluation support programs. LTEC 2019 examines how these technologies and pedagogical advances can be used to change the way teachers teach and students learn, while giving special emphasis to the pedagogically effective ways we can harness these new technologies in education.

CALICO Journal

A revealing insight into the language of the Internet, looking at e-mail, chat, the Web, instant messaging and blogging.

Internet Research Methods

Autonomy has become a keyword of language policy in education systems around the world, as the importance of independent learning and new technologies has grown. Now in a fully revised and updated second edition, *Teaching and Researching Autonomy* provides an accessible and comprehensive critical account of the theory and practice of autonomy. Examining the history of the concept, it addresses important questions of how we can identify autonomy in language learning behaviours and how we can evaluate the wide variety of educational practices that have been designed to foster autonomy in learning. Topics new to this edition include: - Autonomy and new technologies - Teacher autonomy - The sociocultural implications of autonomy With over three hundred new references and five new case studies of research on autonomy providing practical advice on research methods and topics in the field, *Teaching and Researching Autonomy* will be an essential introduction for teachers and students to a subject at the cutting edge of language teaching and research.

Computer Support for Collaborative Learning (CSCL) 1999

Internet & ensino

This volume presents case studies of language learning beyond the classroom. The studies draw on a wide range of contexts, from North and South America to Europe and the Asia-Pacific region. Each provides principled links between theory, research and practice. While out-of-class learning will not replace the classroom,

ultimately all successful learners take control of their own learning. This book shows how teachers can help learners bridge the gap between formal instruction and autonomous language learning. Although English is the primary focus of most chapters, there are studies on a range of other languages including Spanish and Japanese.

Telecollaboration in Foreign Language Learning

This book aims to provide language teachers and trainers with a guide, in both practical and pedagogical terms, to the effective integration of Information and Communications Technologies (ICT) into language teaching and learning. It also aims to serve as an introduction to key areas in ICT for postgraduate students in applied linguistics and related disciplines, and thus to encourage further research and development in these areas.

Learning Technology for Education Challenges

Handbook of Research on Web 2.0 and Second Language Learning

This volume intends to offer guidelines for the utilisation of information and communication technology (ICT) in language study and teaching. First chapters demonstrate how this general revolution has led to the emergence of a new educational paradigm in the context of digitally enriched learning environments including its design and implementation for literary or cultural studies. The applications of ICT in language learning and the use of computers in SLA research are discussed in the next two chapters. The final chapter introduces and discusses the scope and concepts of computational linguistics and corpus linguistics and their applications in lexicography, translation and foreign language teaching. It is also devoted to looking at ways in which computers can contribute to our understanding of what language is and what implications this knowledge can bring to linguistic practice and use.

Professional competencies in language learning and teaching

In recent years traditional, classroom-based language tuition has been increasingly overshadowed by innovative approaches, such as distance learning, supported independent learning and blended learning (with an online component). This timely volume examines the use of language learning strategies in a range of independent settings, and addresses key issues for independent learners such as autonomy, strategic awareness and self-regulation.

Language Learning Beyond the Classroom

Public Internet discussion forums offer opportunities for intercultural interaction in many languages on a vast range of topics, but are often overlooked by language educators in favour of purpose-built exchanges between learners. The book investigates this untapped pedagogical potential.

ICT and Language Learning

As technological innovation continues to affect language pedagogy, there is an increasing demand for information, exemplars, analysis and guidance. This edited volume focuses on international perspectives in Computer-Assisted Language Learning (CALL) in all of its forms, including Technology Enhanced Language Learning, Network-Based Language Learning, Information and Communication Technologies for Language Learning.

The Encyclopedia of Language and Linguistics: Du-Gen

Foreign Language Teaching and Information and Communication Technology

The study investigates interactions between 29 tandem partners from a German and a North American university, who met twice a week in a text-based online environment that allowed them to communicate with each other in real time via a computer keyboard. The analysis focuses on learners' codeswitching, negotiation of meaning, error correction, and the use of specific spellings and punctuation. The data suggest that most partners complied with the principle of reciprocity and that the non-threatening atmosphere of the MOO encouraged them to test their hypotheses about their L2. Moreover, the analysis revealed a noticeable increase in learners' awareness of the target language. All students frequently engaged in negotiation of meaning, but there was a conspicuous absence of corrective feedback.

Resources in Education

A discussion of Information and Communications Technologies (ICT) and language learning, aimed at researchers and practitioners in the field. It deals with developments in Europe, with the majority of the chapters focusing on the results of collaborative international projects.

Beyond the Language Classroom

'I recommend this text for anyone considering undertaking online literature searching and especially those wishing to conduct primary research via the internet. It is extremely comprehensive, very well illustrated, with worked examples of HTML online forms, and case studies, and a wide range of further source material for further reading' - Nurse Researcher Offering a concise, comprehensive guide to conducting research on the Internet, this book provides a detailed explanation of all the main areas of Internet research. It distinguishes between primary research (using the Internet to recruit participants, to administer the research process and to collect results) and secondary research (using the Internet to access available material online). The book is designed for social science researchers and presents a user-friendly, practical guide that will be invaluable to both students and researchers who wish to incorporate the Internet into their research practice.

CC AI.

Autonomous Language Learning in Tandem

ICT and Language Learning: a European Perspective

In a diverse society, the ability to cross communication barriers is critical to the success of any individual personally, professionally, and academically. With the constant acceleration of course programs and technology, educators are continually being challenged to develop and implement creative methods for engaging English-speaking and non-English-speaking learners. Computer-Assisted Language Learning: Concepts, Methodologies, Tools, and Applications is a vital reference source that examines the relationship between language education and technology and the potential for curriculum enhancements through the use of mobile technologies, flipped instruction, and language-learning software. This multi-volume book is geared toward educators, researchers, academics, linguists, and upper-level students seeking relevant research on the improvement of language education through the use of technology.

RANAM

This book opens up new lines of debate in language learning and intercultural communication through an investigation of tandem language learning (a method of language learning based on mutual language exchange between native speakers and learners of each other's language) in connection with intercultural learning and identity construction. Through an empirical study of face-to-face tandem conversations, Jane Woodin provides compelling evidence for the re-definition of the tandem partnership beyond the traditional native speaker-non-native speaker (NS-NNS) paradigm. By analyzing conversation shapes, learner identification of self and other and interactants' own focus on culture, this book reveals how interactants themselves address the complexities of language, learning, ownership and meaning. The book also questions the prevalence of models of intercultural competence which describe the competence of the individual, with little recognition of the role of the relationship or interaction. Woodin considers the broader applicability of the tandem framework of autonomy and reciprocity, and suggests new directions for further research on tandem learning.

Interculturality, Interaction and Language Learning

This comprehensive exploration of theoretical and practical aspects of out-of-class teaching and learning from a variety of perspectives and in various settings around the world includes a theoretical overview of the field, 11 data-based case studies and practical advice on materials development for independent learning.

Network-Based Language Teaching

This volume examines many of the complex issues regarding the language skills

and professional competencies acquired by students studying Modern Foreign Languages (MFL) at universities in the United Kingdom and across Europe. It also outlines the innovative pedagogical strategies, methods, and resources employed by language academics to help graduates transition from university into the world of work through their MFL studies. These issues were discussed at the Professional Competencies in Language Learning and Teaching conference that took place on 12th-13th July 2018 at the University of Nottingham. The conference that was organised as a collaboration between the Department of Modern Languages and Cultures and the Confucius Institute of the University of Nottingham brought together researchers, practitioners, employers, and experts working on 21st century professional competencies and language education.

WorldCALL

Online Communication in a Second Language examines the use of social computer mediated communication (CMC) with speakers of Japanese via longitudinal case studies of up to four years. Through the analysis of over 2000 blogs, emails, videos, messages, games, and websites, in addition to interviews with learners and their online contacts, the book explores language use and acquisition via contextual resources, repair, and peer feedback. The book provides insight into relationships online, and the influence of perceived 'ownership' of online spaces by specific cultural or linguistic groups. It not only increases our understanding of online interaction in a second language, but CMC in general. Based on empirical evidence, the study challenges traditional categorisations of CMC mediums, and provides important insights relating to turn-taking, code-switching, and language management online.
