Malnutrition caused by deficiencies of vitamins and minerals - also called hidden hunger - impairs both the intellectual and physical development of a child. Due to

the absence of clinical symptoms and assessments, no intervention can be staged. The tragedy is that this, in turn, decreases the child's chance to escape from poverty. This book looks at malnutrition in high-income countries, the nutrition transition and nutritional deficiencies in low-income countries, consequences of hidden hunger, and interventions to improve nutrition security. Written by leading experts in the field, it clearly stresses that national governments and international organizations must make malnutrition one of their top priorities in order to provide children with optimal conditions for a healthy future.

In the Book of Revelations, the Four Horsemen herald the arrival of the Apocalypse. When the First Horseman thunders forth, pestilence will spread throughout the land. For the First Horseman is Plague The Spanish Flu killed thirty million people worldwide in 1918. Now, with history threatening to repeat itself, a scientific expedition speeds toward a remote island in the Arctic Sea to recover strains of the lethal virus preserved under layers of ice. For Washington Post reporter Frank Daly, it is the story of a lifetime. But his plan to join the expedition is ruined by a ferocious storm that delays him. And when he meets up with the ship upon its return to port in Norway, it is clear that something has gone terribly wrong. Fear

haunts the faces of the crew. No one will talk. And someone wants Daly to stop asking questions. But if there's a wall around the facts, Daly will batter it down. Persistent and resourceful, he knows how to get answers when none are given. Yet the more he uncovers, the more dangerous the stakes become. Until at last he comes face-to-face with a shocking secret, pitching him into a harrowing race to prevent nothing less than apocalypse.

Human Frontiers, Environments and Disease

In recent decades, we have seen five perilous and interlocking trends dominate global discourse: irreversible climate change, extreme food and water shortages, rising chronic illnesses, and rampant obesity. Why can't we make any progress in counteracting these problems despite vast expenditures of intellectual, institutional, and social capital? What makes these global emergencies the "wicked problems" that resist our best efforts and only grow more daunting? Daniel Callahan, noted author and the nation's preeminent scholar in bioethics, examines these global problems and shines a light on the institutions, practices, and actors that block major change. We see partisan political and ideological forces, old-fashioned hucksters, and trumped-up scientific disagreements but also the problem of modern progress itself. Obesity, anthropogenic climate change, degenerative diseases, ecological degradation, and global famine are often the unintended consequences of unchecked industrial growth, insatiable eating habits,

and technologically extended life spans. Only through well-crafted political, regulatory, industrial, and cultural counterstrategies can we change enough minds to check these threats. With big thinking on issues that are usually evaluated separately, this book is sure to scramble partisan divides and provoke unusual, heated debate.

"Accurst be he that first invented war," wrote Christopher Marlowe--a declaration that most of us would take as a literary, not literal, construction. But in this sweeping overview of the rise of civilization, Robert O'Connell finds that war is

indeed an invention--an institution that arose due to very specific historical circumstances, an institution that now verges on extinction. In *Ride of the Second Horseman*, O'Connell probes the distant human past to show how and why war arose. He begins with a definition that distinguishes between war and mere feuding: war involves group rather than individual issues, political or economic goals, and direction by some governmental structure, carried out with the intention of lasting results. With this definition, he finds that ants are the only other creatures that conduct it--battling other colonies for territory and slaves. But ants, unlike humans, are driven by their genes; in humans, changes in our culture and subsistence patterns, not our genetic hardware, brought the rise of organized warfare. O'Connell draws on anthropology and archeology to locate the rise of war sometime after the human transition from nomadic hunting and gathering to agriculture, when society split between farmers and pastoralists. Around 5500BC, these pastoralists initiated the birth of war with raids on Middle Eastern agricultural settlements. The farmers responded by ringing their villages with walls, setting off a process of further social development, intensified combat, and ultimately the rise of complex urban societies dependent upon warfare to help stabilize what amounted to highly volatile population structures, beset by frequent bouts of famine and epidemic disease. In times of overpopulation, the armies either conquered new lands or self-destructed, leaving fewer mouths to feed. In times of underpopulation, slaves were taken to provide labor. O'Connell explores the histories of the civilizations of ancient Sumeria, Egypt, Assyria, China, and the New

World, showing how war came to each and how it adapted to varying circumstances. On the other hand, societies based on trade employed war much more selectively and pragmatically. Thus, Minoan Crete, long protected from marauding pastoralists, developed a wealthy mercantile society marked by unmilitaristic attitudes, equality between men and women, and a relative absence of class distinctions. In Assyria, by contrast, war came to be an end in itself, in a culture dominated by male warriors. Despite the violence in the world today, O'Connell finds reason for hope. The industrial revolution broke the old patterns of subsistence: war no longer serves the demographic purpose it once did. Fascinating and provocative, *Ride of the Second Horseman* offers a far-reaching tour of human history that suggests the age-old cycle of war may now be near its end.

"Are mass violence and catastrophes the only forces that can seriously decrease economic inequality? To judge by thousands of years of history, the answer is yes. Tracing the global history of inequality from the Stone Age to today, Walter Scheidel shows that inequality never dies peacefully. Inequality declines when carnage and disaster strike and increases when peace and stability return. *The Great Leveler* is the first book to chart the crucial role of violent shocks in reducing inequality over the full sweep of human history around the world. Ever since

humans began to farm, herd livestock, and pass on their assets to future generations, economic inequality has been a defining feature of civilization. Over thousands of years, only violent events have significantly lessened inequality. The "Four Horsemen" of leveling--mass-mobilization warfare, transformative revolutions, state collapse, and catastrophic plagues--have repeatedly destroyed the fortunes of the rich. Scheidel identifies and examines these processes, from the crises of the earliest civilizations to the cataclysmic world wars and communist revolutions of the twentieth century. Today, the violence that reduced inequality in the past seems to have diminished, and that is a good thing. But it casts serious doubt on the prospects for a more equal future. An essential contribution to the debate about inequality, *The Great Leveler* provides important new insights about why inequality is so persistent--and why it is unlikely to decline anytime soon."

Why has the zombie become such a pervasive figure in twenty-first-century popular culture? John Vervaeke, Christopher Mastropietro and Filip Miscevic seek to answer this question by arguing that particular aspects of the zombie, common to a variety of media forms, reflect a crisis in modern Western culture. The authors examine the essential features of the zombie, including mindlessness, ugliness and homelessness, and argue that these reflect the outlook of the contemporary West and its attendant zeitgeists of anxiety, alienation, disconnection and

disenfranchisement. They trace the relationship between zombies and the theme of secular apocalypse, demonstrating that the zombie draws its power from being a perversion of the Christian mythos of death and resurrection. Symbolic of a lost Christian worldview, the zombie represents a world that can no longer explain itself, nor provide us with instructions for how to live within it. The concept of 'domicide' or the destruction of home is developed to describe the modern crisis of meaning that the zombie both represents and reflects. This is illustrated using case studies including the relocation of the Anishinaabe of the Grassy Narrows First Nation, and the upheaval of population displacement in the Hellenistic period. Finally, the authors invoke and reformulate symbols of the four horseman of the apocalypse as rhetorical analogues to frame those aspects of contemporary collapse that elucidate the horror of the zombie. *Zombies in Western Culture: A Twenty-First Century Crisis* is required reading for anyone interested in the phenomenon of zombies in contemporary culture. It will also be of interest to an interdisciplinary audience including students and scholars of culture studies, semiotics, philosophy, religious studies, eschatology, anthropology, Jungian studies, and sociology.

This text intends to emphasize to students that widespread, deadly disease is not a distant historical phenomenon, but a continuing threat to humanity. It explains the economic, political, social, and psychological problems that deadly diseases have caused in our past and the challenges we face currently and in the future. The importance of this study is emphasized by the author's last line in the text, "The history of disease will go on, despite once confident predictions of an end to epidemics in our times, and those who now wage the heroic struggle to find elusive cures to our new plagues may find that they have more to learn from the past than had once been thought."

This compelling account charts the relentless trajectory of humankind, and its changing survival and disease patterns, across place and time from when our ancient ancestors roamed the African Savannah to today's populous, industrialised, globalising world. This expansion of human frontiers - geographic, climatic, cultural and technological - has encountered frequent setbacks from disease, famine and dwindling resources. The social and environmental transformations wrought by agrarianism, industrialisation, fertility control, social modernisation, urbanisation and mass consumption have profoundly affected patterns of health and disease. Today, as life expectancies rise, the planet's ecosystems are being damaged by the combined weight of population size and intensive economic activity. Global warming, stratospheric ozone depletion and loss of biodiversity pose large-scale hazards to human health and survival. Recognising this, can we achieve a transition to sustainability? This and other profound questions underlie this chronicle of expansive human activity, social change, environmental impact and their health consequences.

From the Pulitzer Prize-winning author of Lonesome Dove comes the novel that became the basis for the film Hud, starring Paul Newman. In classic Western style Larry McMurtry illustrates the timeless conflict between the modernity and the Old West through the eyes of Texas cattlemen. Horseman, Pass By tells the story of Homer Bannon, an old-time cattleman who epitomizes the frontier values of honesty and decency, and Hud, his unscrupulous stepson. Caught in the middle is the narrator, Homer's young grandson Lonnie, who is as much drawn to his grandfather's strength of character as he is to Hud's hedonism and materialism. When first published in 1961, Horseman, Pass By caused a sensation in Texas literary circles for its stark, realistic portrayal of the struggles of a changing West in the years following World War II. Never before had a writer managed to encapsulate its environment with such unsentimental realism. Today, memorable characters, powerful themes, and illuminating detail make Horseman, Pass By vintage McMurtry.

For courses in the history of medicine. This reader gives students in a history of medicine class, or the general reading public, a broad selection of readings about the many ways that disease and trauma have affected human populations over time. It draws from both primary and secondary sources to give a dual perspective of a) what was written at the time of various events, and b) what modern scholars have been able to ascertain from historical evidence. It has a broad scope both in time and space, covering materials from earliest Man to contemporary bioethical problems, and contains materials from India, China, Latin America, and the Muslim worlds as well as Europe and the United States. Rather than simply looking at great medical discoveries, it is purposely focused on how trauma and disease have been daily companions of human existence. It fills a serious void in teaching materials in the history of medicine by taking a world perspective, using a combination of primary and secondary sources, covering a huge time span and putting emphasis on the problems created by medical progress, and most importantly, focusing on the effect that medical practices have had on ordinary people throughout history.

From the Brink of the Apocalypse

Praise for the first edition: "Aberth wears his very considerable and up-to-date scholarship lightly and his study of a series of complex and somber calamities is made remarkably vivid." -- Barrie Dobson, Honorary Professor of History, University of York The later Middle Ages was a period of unparalleled chaos and misery -in the form of war, famine, plague, and death. At times it must have seemed like the end of the world was truly at hand. And yet, as John Aberth reveals in this lively work, late medieval Europeans' cultural assumptions uniquely equipped them to face up positively to the huge problems that they faced. Relying on rich literary, historical and material sources, the book brings this period and its beliefs and attitudes vividly to life. Taking his themes from the Four Horsemen of the Apocalypse, John Aberth describes how the lives of ordinary people were transformed by a series of crises, including the Great Famine, the Black Death and the Hundred Years War.

Yet he also shows how prayers, chronicles, poetry, and especially commemorative art reveal an optimistic people, whose belief in the apocalypse somehow gave them the ability to transcend the woes they faced on this earth. This second edition is brought fully up to date with recent scholarship, and the scope of the book is broadened to include many more examples from mainland Europe. The new edition features fully revised sections on famine, war, and plague, as well as a new epitaph. The book draws some bold new conclusions and raises important questions, which will be fascinating reading for all students and general readers with an interest in medieval history.

The First Horseman

This new edition of the book first published in 1989 has been completely revised and updated to reflect the latest medical and legal developments. In addition, it now includes more than two dozen problems for those who prefer to teach using the "problem method." Adams, Clasen, Leonard, Jarvis, and Bobinski, five recognized AIDS law experts who collectively have nearly 80 years of teaching experience and have published more than a dozen books, have co-authored this Third Edition. Carrying on the tradition of its predecessor editions, this book offers skillfully edited cases, extensive notes, and coverage of a wide array of topics, from torts and crimes, to family law and estate planning. At the same time, however, this new edition has been streamlined to allow even the most time-pressed instructors to comfortably reach all of the chapters (and to give those with more time the opportunity to schedule guest speakers and in-class student presentations). It is accompanied by a detailed teacher's manual designed to help both beginning and experienced instructors.

In May 1315, years before the Black Death, it started to rain. For the seven disastrous years that followed, Europeans would be visited by a series of curses unseen since the third book of Exodus: floods, ice, failures of crops and cattle and epidemics not just of disease, but of pike, sword and spear. All told, six million lives, one-eighth of Europe's total population, would be lost. This is the stunning story of the oft-overlooked Great Famine, told with wit and drama, it demonstrates what it all means for today's discussions of climate change.

Plagues in World History provides a concise, comparative world history of catastrophic infectious diseases, including plague, smallpox, tuberculosis, cholera, influenza, and AIDS. John Aberth considers not only their varied impact but also the many ways in which people have been able to influence diseases simply through their cultural attitudes. Our ability to alter disease, even without modern medical treatments, is even more crucial lesson now that AIDS, swine flu, multidrug-resistant tuberculosis, and other seemingly incurable illnesses have raged worldwide. The author's comparative analysis of how different societies have responded in the past to disease illuminates what cultural approaches have been and may continue to be most effective in combating the plagues of today.
